(54) Alarm device

(57) An antitheft alarm device has an electric circuit 21 for generation of audible alarm and a supporting mechanism 42 for a flexible cord 6 formed between an upper and lower face plates 2, 3. The circuit 21 has a switch 26 comprising a stationary terminal 35 and a movable terminal 34 biased by a spring to be engaged with the stationary terminal 35. The flexible cord 6 detachably held by the mechanism 42 normally maintains the movable terminal 34 to be disengaged with the stationary terminal 35. After the cord 6 is detached, the movable terminal 34 engages with the stationary terminal 35 and consequently the audible alarm is generated.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
