(54) **Flap hinge mechanism and method for manufacturing the same**

(57) Flap hinge mechanism (10) comprises a blade-secured portion (11) which is secured to blade (1), a flap-secured portion (12) which is secured to flap (2), and a coupling portion (13) which couples blade-secured portion (11) and flap-secured portion (12) so as to permit angular displacement. The blade-secured portion (11), coupling portion (13), and flap-secured portion (12) are

formed of fibers which serve as composite material. The fibers of the blade-secured portion (11) and flap-secured portion (12) are impregnated with matrices, and the fibers of the coupling portion (13) are not impregnated with a matrix. Such constitution permits attainment of smooth flap motion in spite of large centrifugal forces, making achievement of thin, light designs possible.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 20 3231

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
