(54) Title: SYSTEM AND METHOD FOR ROUTING CALLS FROM A VOICE NETWORK TO A DATA COMMUNICATIONS NETWORK

FIGURE 1

(57) Abstract: An Internet call routing node includes an Internet call routing database for storing routing numbers for routing calls directed to an Internet service provider to a remote network access server. An Internet call routing process determines whether a call signaling message relates to a call directed to the Internet service provider. In response to determining that the call is directed to an Internet service provider, the Internet call routing process performs a lookup in the Internet call routing database to determine the routing number for routing the call to the remote network access server.
