UNITED STATES PATENT OFFICE

JOSHUA BARNES, OF BROOKLYN, NEW YORK.

IMPROVEMENT IN COMBINED SHAWL-PIN AND BUTTON-HOOK.

Specification forming part of Letters Patent No. **188,276**, dated March 13, 1877; application filed November 2, 1875.

To all whom it may concern:

Be it known that I, JOSHUA BARNES, of Brooklyn, in the county of Kings and State of New York, have invented a new and useful Improvement in a Combined Shawl-Pin and Glove-Buttoner, which improvement is fully set forth in the following specification, reference being had to the accompanying drawing.

The object of my invention is to form a combined shawl-pin and glove-buttoner from a piece of metallic wire of suitable length, by bending the same at one end by any suitable means, in such a manner that it shall form a ring, hook, or loop, for the purpose of buttoning a glove, or for any other purpose for which such an instrument is generally used, the other end of the wire being pointed, enabling it to be easily inserted into the folds of a shawl or other garment, for the purpose of fastening the same or holding its folds to-

gether, the form of the combined shawl-pin and glove-buttoner being clearly shown in Figure 1 of the accompanying drawing.

I do not confine myself to the exact form of shawl-pin and glove-buttoner, as shown in Fig. 1 of the accompanying drawing, but modify it somewhat by the formation of a loop at one end of the piece of metallic wire, as may be found most desirable, which modification is clearly shown in Fig. 2 of the accompanying drawing.

I claim as my invention—

The combined shawl-pin and glove-buttoner, provided with a point at one end and an open hook or loop at the other, substantially as described and shown.

JOSHUA BARNES.
