(54) Title: ROLLING PIN

Fig. 1

(57) **Abstract:** A rolling pin constituted to flatten and stretch dough featuring a tubular body (11) made of an aluminum sheet curved around a longitudinal axis (12), electro-welded along a pair of longitudinal edges brought into reciprocal contact bending. The surface of rolling pin may include helical grooves which start from the center and head up towards the ends, in clockwise and counter-clockwise direction. The rolling pin can be provided, at its ends with caps (15), which close the tubular body, and possibly integrated with grip handles (17). The tubular body (11) can also be equipped, in the vicinity of at least one of its ends, with one or more holes (16) for the insertion of hanging hooks to store the rolling pin.

A. CLASSIFICATION OF SUBJECT MATTER
INV. A21C3/02
ADD.

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
A21C

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

EPO-Internal, WPI Data

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
