(57) **ABSTRACT**

A new and distinct cultivar of *Salvia* plant named 'Blue Lips', characterized by its upright plant habit; freely branching habit; freely flowering habit; and yellow and dark purple-colored flowers.

(21) Appl. No.: **12/074,420**

**2 Drawing Sheets**

(22) Filed: **Mar. 3, 2008**

**1**

**2**

Botanical designation: *Salvia bulleyana*.  
Cultivar denomination: 'Blue Lips'.

new *Salvia* differed from plants of the cultivar Rhapsody in Blue in the following characteristics:

**BACKGROUND OF THE INVENTION**

1. Plants of the new *Salvia* were not as compact as plants of the cultivar Rhapsody in Blue.
- 5 2. Plants of the new *Salvia* were not as dense and bushy as plants of the cultivar Rhapsody in Blue.
3. Plants of the new *Salvia* and the cultivar Rhapsody in Blue differed in flower color as plants of the cultivar Rhapsody in Blue had purple-colored flowers.

The present invention relates to a new and distinct cultivar of *Salvia*, botanically known as *Salvia bulleyana* and herein-after referred to by the name 'Blue Lips'.

The new *Salvia* is a naturally-occurring whole plants mutation of an unnamed selection of *Salvia bulleyana*, not patented. The new *Salvia* was discovered and selected by the Inventor as a single flowering plant from within a population of plants of the unnamed selection in a controlled environment in Noordwijkherhout, The Netherlands in August, 2004.

**BRIEF DESCRIPTION OF THE PHOTOGRAPHS**

Asexual reproduction of the new cultivar by vegetative cuttings in a greenhouse in Noordwijkherhout, The Netherlands, since 2005, has shown that the unique features of this new *Salvia* are stable and reproduced true to type in successive generations.

The accompanying colored photographs illustrate the overall appearance of the new cultivar, showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photographs may differ slightly from the color values cited in the detailed botanical description which accurately describe the actual colors of the new *Salvia*.

**SUMMARY OF THE INVENTION**

The photograph on the first sheet comprises a side perspective view of a typical flowering plant of 'Blue Lips' grown in an outdoor nursery.

Plants of the cultivar Blue Lips have not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment such as temperature and light intensity without, however, any variation in genotype.

The photograph on the second sheet is a close-up view of typical flowers of 'Blue Lips'.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Blue Lips'. These characteristics in combination distinguish 'Blue Lips' as a new and distinct cultivar:

**DETAILED BOTANICAL DESCRIPTION**

1. Upright plant habit.
2. Freely branching habit.
3. Freely flowering habit.
4. Yellow and dark purple-colored flowers.

In the following description, color references are made to The Royal Horticultural Society Colour Chart, 2001 Edition, except where general terms of ordinary dictionary significance are used. Plants used for the aforementioned photographs and following description were grown under conditions which closely approximate commercial production conditions during the late summer in an outdoor nursery in Noordwijkherhout, The Netherlands. During the production of the plants, day temperatures averaged 20° C. and night temperatures averaged 14° C. Plants were pinched one time about two weeks after planting. Plants used for the photographs and description were about two years old.

Plants of the new *Salvia* differ from plants of the parent selection primarily in flower color as plants of the parent selection have pale purple-colored flowers.

Plants of the new *Salvia* can be compared to plants of the cultivar Rhapsody in Blue, disclosed in U.S. Plant Pat. No. 15,148. In side-by-side comparisons conducted by the Inventor in Noordwijkherhout, The Netherlands, plants of the

Botanical classification: *Salvia bulleyana* cultivar Blue Lips.  
Parentage: Naturally-occurring whole plant mutation of an unnamed selection of *Salvia bulleyana*, not patented.

## Propagation:

*Type cutting.*—Vegetative cuttings.

*Time to initiate roots, summer.*—About three weeks at 20° C.

*Time to initiate roots, winter.*—About four weeks at 12° C.

*Time to produce a rooted young plant, summer.*—About 50 days at 20° C.

*Time to produce a rooted young plant, winter.*—About 70 days at 12° C.

*Root description.*—Fine, freely branching; color, 177A.

## Plant description:

*Form.*—Herbaceous perennial. Upright plant form. Freely basal branching with about five main stems; vigorous growth habit. Flowers arranged in verticillasters on spikes.

*Plant height.*—About 60 cm.

*Plant width.*—About 40 cm.

*Lateral branch description.*—Length: About 40 cm. Diameter: About 6 mm. Internode length: About 14 cm. Strength: Strong. Aspect: Mostly upright. Texture: Smooth, glabrous. Color: Close to 144A.

## Foliage description:

*Arrangement.*—Opposite, simple.

*Length.*—About 20 cm.

*Width.*—About 8 cm.

*Shape.*—Deltoid.

*Apex.*—Acute.

*Base.*—Sagittate.

*Margin.*—Crenate.

*Texture, upper and lower surfaces.*—Setaceous, rough.

*Venation pattern.*—Pinnate.

*Color.*—Developing foliage, upper surface: Close to 143A. Developing foliage, lower surface: Close to 139C. Fully expanded foliage, upper surface: Close to 137A; venation, close to 142C. Fully expanded foliage, lower surface: Close to 138B; venation, close to 142C.

*Petiole length.*—About 12 cm.

*Petiole diameter.*—About 7 mm.

*Petiole texture, upper and lower surfaces.*—Setaceous, rough.

*Petiole color, upper surface.*—139B, towards the base, N79B.

*Petiole color, lower surface.*—138A, towards the base, N79B.

## Flower description:

*Flower arrangement and shape.*—Single bilabiate flowers arranged in verticillasters on spikes; flowers drooping. Freely flowering habit, about 90 to 110 flowers per inflorescence.

*Natural flowering season.*—Continuous flowering from late summer to early autumn in The Netherlands.

*Flower longevity on the plant.*—About two days; flowers not persistent.

*Flower buds.*—Length: About 2 mm to 12 mm. Diameter: About 2 mm to 5 mm. Shape: Oblong. Color: Close to 141C.

*Inflorescence size.*—Length: About 40 cm. Diameter: About 20 cm.

*Flowers.*—Diameter: About 8 mm to 10 mm. Depth (height): About 2 cm to 3 cm.

*Petals.*—Arrangement: Two, fused at the base. Length: About 2.5 cm. Width: About 1 cm. Shape, upper lip: Broadly elliptic; apex, hooked; base, acute; margin, entire. Shape, lower lip: Orbicular; apex, bi-lobed; base, acute; margin, entire. Texture, upper and lower surfaces: Pubescent. Color: Upper lip, when opening and fully opened, upper and lower surfaces: Close to 11A. Lower lip, when opening and fully opened, upper and lower surfaces: Close to 79B.

*Calyx.*—Shape: Three to five sepals fused into a tube. Length: About 1 cm. Width: About 6 mm. Texture, upper and lower surfaces: Pubescent. Color, upper surface: Close to 143A. Color, lower surface: Close to 143C.

*Pedicels.*—Strength: Strong. Length: About 6 mm. Diameter: About 2 mm. Aspect: About 45° from vertical. Texture: Pubescent. Color: Close to 144B.

*Reproductive organs.*—Stamens: Quantity per flower: Two. Filament length: About 5 mm to 10 mm. Filament color: Close to 155A. Anther shape: Ovate. Anther length: About 9 mm to 12 mm. Anther color: Close to N186A. Pollen amount: None observed. Pistils: Quantity per flower: One. Pistil length: About 2.5 cm. Stigma shape: Rounded. Stigma color: Close to N77D. Style length: About 2.5 cm. Style color: Close to 11D. Ovary color: Close to 11D.

*Seed/fruit.*—Seed and fruit production has not been observed.

*Disease/pest resistance:* Plants of the new *Salvia* have not been noted to be resistant to pathogens and pests common to *Salvia*.

*Garden performance:* Plants of the new *Salvia* have exhibited good tolerance to rain and wind and have been observed to tolerate temperatures from about -20° C. to about 40° C.

It is claimed:

1. A new and distinct *Salvia* plant named 'Blue Lips' as illustrated and described.
