(54) Title: PACIFIER AND A STERILIZING CASE THEREFOR

FIG. 1

(57) Abstract: A pacifier assembly has a pacifier having a shield with a convex surface and a concave surface. The pacifier has a back portion extending from the convex surface; and a teat extending from the concave surface. The convex surface has a plurality of undulations and a plurality of apertures extending through the shield. The pacifier assembly further includes a case. A pacifier assembly provides for a pacifier having a shield with a convex surface and a concave surface, a back portion extending from the convex surface and a teat extending from the concave surface. The pacifier assembly further provides for a case having a base and a cover. The base includes at least two compartments. One of the at least two compartments includes chamber for receiving fluid and the other of the at least two compartments is sized to receive the pacifier.

* Special categories of cited documents:
 "A" document defining the general state of the art which is not considered to be of particular relevance
 "E" earlier application or patent but published on or after the international filing date
 "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
 "O" document referring to an oral disclosure, use, exhibition or other means
 "P" document published prior to the international filing date but later than the priority date claimed
 "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
 "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
 "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
 "&" document member of the same patent family
