

UNITED STATES PATENT OFFICE.

SOLOMON FIELD, OF GALVA, ILLINOIS.

IMPROVEMENT IN MEDICAL COMPOUNDS.

Specification forming part of Letters Patent No. **145,560**, dated December 16, 1873; application filed November 15, 1873.

To all whom it may concern:

Be it known that I, Dr. SOLOMON FIELD, of Galva, in the county of Henry and State of Illinois, have invented a new Medical Compound for purifying the blood and operating upon the liver, of which the following is a specification:

My new medical compound is composed of butternut-root bark, forty pounds; sarsaparilla root, six pounds; sassafras-root bark, six pounds; wahoo-root bark, four pounds; dandelion root, four pounds; mandrake root, four pounds; wild-cherry bark, four pounds; and white-popple bark, four pounds, mixed and boiled in one hundred and twenty gallons of

water from one to one and a half hour. I then add sufficient alcohol to the mixture to preserve it—say, one gallon of alcohol to every ten gallons of the mixture.

The compound may also be made of the extracts of the above-named ingredients mixed in the proportion above given.

What I claim is—

A medical compound composed of the above-named ingredients, in the proportion given, substantially as and for the purpose specified.

SOLOMON FIELD.
