(54) Title: METHODS FOR MANAGING DATA TRANSMISSIONS BETWEEN A MOBILE STATION AND A SERVING STATION

(57) Abstract: In the present technique of a data transmission management, responsive to a reselection during a data transmission, a determination (314, 514) is made as to whether remaining untransmitted data blocks of the data transmission can be sent within an allowed transmission time. If so, the remaining untransmitted data blocks are transmitted (318, 518) to complete the data transmission. If, however, the remaining untransmitted data blocks cannot be transmitted within the allowed transmission time, the communication link is terminated (312, 510) to stop the downlink data transmission with a serving station.
