UNITED STATES PATENT OFFICE.

FREDERICK HOOPER, OF LONDON, ENGLAND.

BICYCLE GARMENT.

SPECIFICATION forming part of Letters Patent No. 575,647, dated January 19, 1897.

Application filed September 5, 1896. Serial No. 605,016. (No model.)

To all whom it may concern:

Be it known that I, FREDERICK HOOPER, a citizen of England, residing at 460 Fulham Road, Walham Green, London, England, have
5 invented a certain new and useful Improvement in Lower Garments for Female Cyclists or Riders, of which the following is a specification.

My invention relates to lower garments
10 suitable for female cyclists or riders, so constructed as to give convenience for opening without undressing, as I shall describe, referring to the accompanying drawings.

Figure 1 is a back view of a lower garment
15 according to my invention provided with a long skirt. Fig. 2 is a back view of one with short skirt opened at the back. Fig. 3 is a similar view with the falldown-flap open. Fig. 4 is a corresponding section. Fig. 5 is
20 a back view showing the garment opened.

I make a garment A of the nature of drawers or knickerbockers, but formed as trousers
25 sometimes are formed with a buttoned opening B, this, however, being at the back and having a falldown-flap C.

To the upper band of A, I attach a skirt D, which is open along the back throughout
its whole length.

The skirt may be long, as shown in Fig. 1,
30 or short, as shown in the other figures; also the legs of the drawers or trousers instead

of being short, as those of knickerbockers, (shown in the figures,) may obviously be of greater or less length, as may be desired.

The skirt being open along the back 35 throughout its whole length permits the skirt to hang evenly on each side of the wearer when riding a cycle, and on turning the skirt aside each way the flap can be readily let down and the back of the garment opened. 40

Having thus described the nature of this invention and the best means I know of carrying the same into practical effect, I claim—

As a new article of manufacture, a bicycle garment consisting of drawers or trousers di-
45 vided vertically at the back and detachably fastened together and provided with a posterior falldown-flap detachably fastened to said divided portions, and a skirt attached to
the drawers or trousers at the waistband only, 50 said skirt being divided at the rear through its length from top to bottom and having its divided edges wholly unattached, substantially as described.

In testimony whereof I have signed my
55 name to this specification, in the presence of two subscribing witnesses, this 26th day of August, A. D. 1896.

FREDERICK HOOPER.
