UNITED STATES PATENT OFFICE.

WLADYSLAUS JESCHKE, OF BROOKLYN, NEW YORK.

PAPER OR MUSIC FILE.

SPECIFICATION forming part of Letters Patent No. 486,875, dated November 29, 1892.

Application filed April 8, 1892. Serial No. 428,307. (No model.)

To all whom it may concern:

Be it known that I, WLADYSLAUS JESCHKE, of Brooklyn, Kings county, New York, have invented an Improved Paper or Music File, of which the following is a specification.

This invention relates to a file for papers, music, and similar matter, which is constructed with a view of permitting the ready attachment of the papers and the subsequent rolling up of the filled file.

The invention consists in the various features of improvement more fully pointed out in the claims.

In the accompanying drawings, Figure 1 is a perspective view of my improved file, showing it rolled up; Fig. 2, a face view, partly in section, of the file, showing it open; Fig. 3, a longitudinal section on line *x x*, Fig. 2; and Fig. 4 a section on line *y y*, Fig. 1.

The letters *a a* represent the two flexible covers of the file, connected by a back *a'*, as usual. Upon the innerside of each cover there is formed by an inner lining *a²* an inner pocket *a³*, that opens toward the back *a'*. Into the pockets *a³* there enter laterally-extending flaps *b'* of an additional inner detachable back *b*. To this back *b* the papers, music, &c., *d* are attached by means of suitable fastening devices, and then the back is secured to the covers *a* by slipping the flaps *b'* into the pockets *a³*. One of the covers *a* is provided with

an outside pocket *a⁴*, and when the file has been properly filled it is bent and its edge is slipped into the pocket *a⁴* to form a continuous roll, Fig. 1.

The handle *c* of the file is made A-shaped, with the two shanks attached to one cover and the apex provided with the locking-plate that is adapted to be attached to the other cover. The cross-bar *c'* of the A thus comes to lay on top of the rolled-up file and constitutes the handle-strap.

What I claim is—

1. A file composed of an outer cover having pockets and of an inner removable back having laterally-extending flaps that are adapted to be received by such pockets, substantially as specified.

2. A file composed of an outer flexible cover having two inner pockets *a³* and an outer pocket *a⁴* and of a removable back *b*, having flaps *b'*, adapted to be received by pockets *a³*, substantially as specified.

3. A file composed of an outer flexible cover having two inner pockets *a³* and an outer pocket *a⁴*, of an inner removable back *b*, having flaps *b'*, and of an A-shaped handle *c*, substantially as specified.

WLADYSLAUS JESCHKE.
