UNITED STATES PATENT OFFICE.

CHARLES B. SHERLOCK, OF PHILADELPHIA, PENNSYLVANIA.

COMBINATION DOLL AND RADIO SET.

Application filed December 29, 1923. Serial No. 683,526.

This invention relates to dolls and more particularly to a doll having a radio set inserted in the body portion. The object of the invention is to provide a doll in combination with a radio set in which the radio set is inserted in the body of the doll, the dial and terminals being on the outside and means for fastening the said set to the chest portion of the doll.

For a more detailed understanding of the invention, attention is now called to the drawings in which a preferred embodiment is shown illustrated. In these drawings like parts are designated by like reference characters in all the views.

Fig. 1 is a front view of a doll showing the radio set attached thereto.

Fig. 2 is a section on line 2—2 of Fig. 1.

Referring now to the drawings in detail, numeral 1 designates the body of the doll, 2 the cavity and 3 the radio set. Numeral 4 represents the dial of the radio set and 5 the usual terminals. In the wall of the body portion of the doll an opening 6 is provided in which the radio set 3 is inserted and is kept in place by screws 7.

Having thus described my invention what I desire to secure by United States Letters Patent is:

In a device of the class described, the combination of a doll body having a hollow interior and an opening at the front, a radio set inserted through said opening and having a flange for attachment to the exterior of the body of the doll around said opening, means for securing said flange to said body and means to operate the radio set from the exterior of the body.

In testimony whereof I affix my signature.

CHARLES B. SHERLOCK.
