UNITED STATES PATENT OFFICE.

HERMAN IHLENBURG, OF PHILADELPHIA, PENNSYLVANIA, ASSIGNOR TO MACKELLAR, SMITHS & JORDAN, OF SAME PLACE.

DESIGN FOR A FONT OF PRINTING-TYPE.

SPECIFICATION forming part of Design No. 12,968, dated June 13, 1882.

Application filed April 11, 1882. Term of patent 14 years.

To all whom it may concern:

Be it known that I, HERMAN IHLENBURG, (assignor to MACKELLAR, SMITHS & JORDAN,) of the city and county of Philadelphia, Pennsylvania, have invented and produced a new and original Design for a Font of Printing-Type, of which the following is a specification.

The nature of my design is clearly shown in the accompanying typographic impression, to which reference is made; and it consists of a letter of the antique character with heavy ball terminations.

In the H, N, U, V, and W the right-hand up-and-down portion of the letter extends above the left-hand portion of the letter, and in the H, M, and N the left-hand portion of the letter extends below the line. In the J, X, and Y the lower portion of the letter extends below the line, as shown.

The character of the design is preserved in the lower-case and numerals, as shown.

In connection with the font, and forming part of the same, are shown the ornamented justifiers, one upon the left and two upon the right of the numerals. That upon the left may be described as a heavy dot, succeeded upon the right by a figure formed by a heavy line gradually widening at its upper portion, the sides of which are inclined, and at this point met centrally by a heavy line extending to the right and terminating in a heavy dot. This line is ornamented above and below by the heavy pennated-like figures, succeeded on the right by the curved lines above and below, curving to the left, and terminating in the heavy dots. The second ornamental justifier upon the right of the numerals consists of the semi-elliptical curved figures, one end terminating in the heavy dot and the other in the curve, as shown. Between these, on the left, is the figure gradually widening at its base, and upon the right the heavy rhomboidal figure, terminating on the left in the line intersecting the curved figures. The third form of justifiers consists of two heavy dots placed about centrally upon each side of a line having a spear-head-like ornament at its upper and lower termination.

Having now set forth my invention, I claim as new—

The design for a font of printing-type, as shown and described.

HERMAN IHLENBURG.

In presence of—

C. F. HUCH,

HERMAN METIUS.
