Festus Haydon
Letter Patent X6133

The Schedule referred to in these Letters Patent and making part of the same containing a description in the words of the said Festus Haydon himself of his improvement in the manufacture of American wire eyed cast Buttons.

To all to whom these presents shall come. Be it known that I Festus Haydon of Waterbury in the County of New Haven in the State of Connecticut a native citizen of the United States have invented a new & useful improvement in the manufacture of American wire eyed cast Buttons & that the following is a full and exact description thereof. This invention & improvement consists mostly in the application of the cast shell rim & inlaid work to the wire eyed cast button in the same manner in all respects except the inlaid work, as they have heretofore been applied to buttons made with soldered eyes. The wire eyed cast button for coat or vest or other wire is made, stamped according to fancy burnished and edged in the usual manner & fitted to receive the cast or shell rim required which is prepared from the same material & put on & closed down in the same manner as is usually done in buttons with soldered eyes — The wire eyed cast button may be prepared for inlaid work by an indentation in the face by a suitable stamp or die or by a prejection in the face of the mould or by raising the edge by pressing two dies calculated for that object. When thus prepared any fancy work of brass or ornamental metal may be inserted & fixed in its place by the burnisher or by a stamp with ornamental edges impressed upon the under edge. I do not claim as my invention the method of making the wire eyed cast button, this having been known before. But do claim as being part of my invention

X6133

tion the method of making & preparing the caps, shells, rims, inlaid or other ornamental work attached to the face of other buttons as now known and used, but I do claim as my invention & improvement: the application thereof to the nine agerical button as above described, for this I solicit Letters Patent. In testimony whereof I hereunto affix my name (and seal this 6th day of Septr A.D. 1830
