CLAIM
The ornamental design for a therapeutic eyelid patch with adhesive layer containing therapeutic medicines, as shown and described.

DESCRIPTION
FIG. 1 is a front, right perspective view of a therapeutic eyelid patch with adhesive layer containing therapeutic medicines showing our new design;
FIG. 2 is a front view thereof;
FIG. 3 is a top plan view thereof, the bottom being a mirror image thereof;
FIG. 4 is a rear view thereof;
FIG. 5 is a right side elevational view thereof;
FIG. 6 is a left side elevational view thereof;
FIG. 7 is a front, right perspective view thereof showing the top layer partly peeled back; and,
FIG. 8 is a perspective view thereof with the top layer peeled away, the broken line showing a person’s head illustrating an environment of use and forming no part of the claimed design.
The therapeutic eyelid patch consists of three transparent layers. A feature of the design is that the inner surface of the top layer has a matte finish, and the transparency of the top layer appears duller and less transparent in the region thereof that is spaced from the middle layer, the duller transparency being denoted by fine stippling.
