(57) Abstract: The invention relates to substituted benzo[b]azepin-2-one compounds, to methods for the production thereof, to medicaments containing these compounds and to the use of these compounds for producing medicaments.

Substituted benzo[b]azepin-2-one compounds

The present invention relates to substituted benzo[b]azepin-2-one compounds, a process for the production thereof, pharmaceutical preparations containing these compounds and the use of these compounds for the production of pharmaceutical preparations.

The treatment of pain is of great medical significance. There is a worldwide need for effective pain treatments. The urgency of the requirement for effective therapeutic methods for providing tailored and targeted treatment of chronic and non-chronic pain, this being taken to mean pain treatment which is effective and satisfactory from the patient's standpoint, is evident from the large number of scientific papers relating to applied analgesia and to basic nociception research which have appeared in recent times.

Conventional opioids, such as for example morphine, are effective in the treatment of severe to very severe pain. However, they produce accompanying symptoms which include respiratory depression, vomiting, sedation, constipation and development of tolerance. Moreover, they are less effective in treating neuropathic or incidental pain, which is in particular frequently experienced by tumour patients.

The object of the present invention was accordingly to provide new compounds which are suitable as pharmaceutical active ingredients in pharmaceutical preparations, preferably as pharmaceutical active ingredients for combatting pain, preferably chronic or neuropathic pain and may be used for the treatment or prevention of
neurodegenerative diseases, preferably Alzheimer's disease, Huntington's chorea or Parkinson's disease, stroke, cerebral infarct, cerebral ischaemia, cerebral oedema, insufficiency states of the central nervous system, preferably hypoxia or anoxia, epilepsy, schizophrenia, psychoses brought about by elevated amino acid levels, AIDS dementia, encephalomyelitis, Tourette's syndrome, perinatal asphyxia, tinnitus, migraine, inflammatory and/or allergic reactions, depression, mental health conditions, urinary incontinence, pruritus or diarrhoea or for anxiolysis or anaesthesia.

According to the invention, this object is achieved by the provision of substituted benzo[b]azepin-2-one-compounds of the general formulae I and II below and in each case of the tautomers thereof, optionally in the form of the diastereomers, pure enantiomers, racemates, non-racemic mixtures of enantiomers or diastereomers and in each case optionally in the form of corresponding bases, salts and solvates, wherein these compounds exhibit in particular an excellent analgesic action.

The present invention therefore provides substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof,
in which
R¹, R², R³ and R⁴, identical or different, denote a linear or branched, saturated or unsaturated aliphatic C₁-₁₀ residue or a saturated or unsaturated cycloaliphatic C₃-₇ residue, wherein each of the above-stated residues may optionally be joined together via an ether bridge, or hydrogen, a halogen or a hydroxy group,

R⁵ denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic C₁-₁₀ residue, an aryl or a heteroaryl residue,

R⁶ denotes hydrogen or a residue of the formula -CH₂-NR⁷₂, wherein the two residues are identical or different and have the meaning stated below or may form a 3-8-membered ring together with the nitrogen atom connecting them as a ring member,

R⁷ denotes a linear or branched, saturated or unsaturated aliphatic C₁-₆ residue or a saturated or unsaturated cycloaliphatic C₃-₆ residue,

A denotes a bridge with one of the following formulae: - (CH₂)ₙ₊₂⁻, -(CH₂)ₙ-CH=CH-, -(CH₂)ₙCOO-, -(CH₂)ₙCONH-, -(CH₂)ₙ₊₁O(CH₂)ₚCO-, -(CH₂)ₙ₊₁O-, -(CH₂)ₙ₊₁NR¹⁻ in which n denotes 0, 1, 2 or 3 and p denotes 0 or 1, R¹ has the meaning stated hereinafter and the bond to the residue X is always stated last and wherein bonding of the residues X¹⁷ and X¹⁸ is possible only via the three bridges stated first,
and X denotes one of the following residues of the general formulae $X^1$ to $X^{10}$, in which the unoccupied bond line symbolises the bond to the bridge A and
in which

$R^{1'}$ denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic $C_{1-10}$ residue, a saturated or unsaturated cycloaliphatic $C_{3-7}$ residue, an aryl or heteroaryl residue,

$R^{2'}$ denotes a linear or branched, saturated or unsaturated aliphatic $C_{1-10}$ residue, a saturated or unsaturated
cycloaliphatic C₃₋₇ residue or an aryl or heteroaryl residue wherein all above-stated residues may optionally be joined via an ether, thioether or SO₂ bridge, or hydrogen, a halogen, a hydroxy, thiol, cyano or nitro group or a group of the formula -NR₁² wherein the two residues R¹² are identical or different and have the above-stated meaning,

R³'' denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₁₀ residue, a saturated or unsaturated cycloaliphatic C₃₋₇ residue, an aryl or heteroaryl residue, wherein all the above-stated residues may optionally be joined via an ether or an ester bridge, hydrogen, a halogen, a hydroxy group,

R⁴'' denotes hydrogen, an aryl or heteroaryl residue, wherein the aryl or heteroaryl residue may comprise at least one substituent R²'' with the above meaning, with the exception of hydrogen,

R⁵'' denotes a residue of the formula -NR⁶², wherein the two residues R⁶'' may be identical or different and have the meaning stated hereinafter or may form a 3-7-membered ring together with the nitrogen atom connecting them as a ring member, which ring may optionally contain at least one oxygen and/or at least one further nitrogen as a ring atom, wherein the nitrogen may comprise a substituent R²⁰'' with the meaning stated hereinafter,

R⁶'' denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₆ residue, a saturated or unsaturated or cycloaliphatic C₃₋₇ residue, an aryl or heteroaryl residue,

R⁷'' denotes a cyano, amide or carboxylic acid residue,
R\(^8\)' denotes a residue of the formula -NR\(^8\)\(^2\),' wherein the two residues R\(^8\)' may be identical or different and have the meaning stated hereinafter or may form a 3-7-membered ring together with the nitrogen atom connecting them as a ring member, which ring may optionally contain at least one oxygen and/or at least one further nitrogen as a ring atom,

R\(^9\)' denotes hydrogen, a linear or branched aliphatic C\(_{1-10}\) residue,

R\(^{10}\)' denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic C\(_{1-10}\) residue, an aryl or heteroaryl residue and

Z denotes at least one optionally present oxygen, sulfur or nitrogen as a ring atom,

and q denotes 0, 1, 2 or 3,

optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

Tautomers of the compounds of the general formulae I and II arise if R\(^8\) denotes hydrogen. Reference is always also made to these possible tautomers.
Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are preferred, in which R² and R³, identical or different, denote a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue or a halogen and R⁴ and R⁵ in each case denote hydrogen, R⁶ denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue and R⁷ denotes hydrogen or a residue of the formula -CH₂-NR⁷₂, in which R² denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are particularly preferred, in which R² and R³ in each case denote a methyl group or a chlorine and R¹ and R⁴ in each case denote hydrogen, R⁵ denotes hydrogen or a methyl group and R⁶ denotes hydrogen or a residue of the formula -CH₂-N(CH₃)₂, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or
in the form of the solvates thereof, in particular hydrates.

Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are also preferred, in which \( R^3 \) denotes a linear or branched, saturated or unsaturated aliphatic \( C_{1-3} \) residue or a halogen and \( R^1, R^2 \) and \( R^4 \) in each case denote hydrogen, \( R^5 \) denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic \( C_{1-3} \) residue and \( R^6 \) denotes hydrogen or a residue of the formula \(-CH_2-N(R^7)_2\), in which \( R^7 \) denotes a linear or branched, saturated or unsaturated aliphatic \( C_{1-3} \) residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are also particularly preferred, in which \( R^3 \) denotes a methyl group or a chlorine and \( R^1, R^2 \) and \( R^4 \) in each case denote hydrogen, \( R^5 \) denotes hydrogen or a methyl group and \( R^6 \) denotes hydrogen or a residue of the formula \(-CH_2-N(CH_3)_2\), optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of
the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

5 Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are also preferred, in which R^1 and R^3, identical or different, denote a linear or branched, saturated or unsaturated aliphatic C_{1-3} residue or a halogen and, R^2 and R^4 in each case denote hydrogen, R^5 denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic C_{1-3} residue and R^6 denotes hydrogen or a residue of the formula -CH_2-NR^7_2, in which R^7 denotes a linear or branched, saturated or unsaturated aliphatic C_{1-3} residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

25 Substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof are also particularly preferred, in which R^1 and R^3 in each case denote a methyl group or a chlorine and R^2 and R^4 in each case denote hydrogen, R^5 denotes hydrogen or a methyl group and R^6 denotes hydrogen or a residue of the formula -CH_2-N(CH_3)_2, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular
enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or
diastereomers, in any desired mixing ratio or in each case
in the form of the acids or bases thereof or in the form of
the salts thereof, in particular physiologically acceptable
salts, or in the form of the solvates thereof, in
particular hydrates.

Also preferred are substituted benzo[b]azepin-2-one
compounds of the general formulae I and II and in each case
the tautomers thereof, in which A denotes a bridge of the
formula -CH₂-COO- or -CH₂CONH- optionally in form of the
racemates thereof, the pure stereoisomers thereof, in
particular enantiomers or diastereomers, or in the form of
mixtures of the stereoisomers, in particular the
enantiomers or diastereomers, in any desired mixing ratio
or in each case in the form of the acids or bases thereof
or in the form of the salts thereof, in particular
physiologically acceptable salts, or in the form of the
solvates thereof, in particular hydrates.

Also preferred are substituted benzo[b]azepin-2-one
compounds of the general formulae I and II and in each case
the tautomers thereof, in which X denotes a residue of the
following formula:
optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

The following substituted benzo[b]azepin-2-one compounds and optionally the tautomers thereof are very particularly preferred:

- 2'-((8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester,

- 2'-((8-Chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester,
2'(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl]acetamide,

5 2'(8-Chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl]acetamide

optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

The present invention also provides a process for the production of substituted benzo[b]azepin-2-one compounds of the above-stated general formulae I and II and in each case the tautomers and corresponding stereoisomers thereof, characterised in that

25 A) an optionally substituted 2-aminobenzoic acid alkyl ester of the general formula (I), in which R¹, R², R³, R⁴ and R⁵ have the above-stated meaning and R denotes an alkyl group, preferably a methyl or ethyl group,
is reacted with succinic acid dialkyl ester of the general formula (2), in which \( R' \) denotes an alkyl group, preferably a methyl or ethyl group and \( R^x \) denotes chlorine or an alkoxy group, preferably a methoxy or ethoxy group,

under suitable reaction conditions, in a suitable solvent, preferably pyridine, and then worked up, optionally followed by purification of the optionally substituted N-(2-carbalkoxyphenyl)succinic acid alkyl ester amide formed of the general formula (3), in which \( R, R', R^1, R^2, R^3, R^4 \) and \( R^5 \) have the above-stated meaning,
B) an optionally substituted N-(2-carbomethoxyphenyl)succinic acid alkyl ester amide of the general formula (3) is reacted in the presence of potassium tert-butanolate in a suitable solvent and then worked up, optionally followed by purification of the optionally substituted 5-hydroxy-2-oxo-2,3-dihydro-1H-benzo[b]azepin-4-carboxylic acid alkyl ester formed of the general formula (4), in which $R', R^1, R^2, R^3, R^4$ and $R^5$ have the above-stated meaning,

C) an optionally substituted 5-hydroxy-2-oxo-2,3-dihydro-1H-benzo[b]azepin-4-carboxylic acid alkyl ester of the
general formula (4) is reacted in a dimethyl sulfoxide/water mixture at elevated temperature and then worked up, optionally followed by purification of the optionally substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (5), in which $R^1$, $R^2$, $R^3$, $R^4$ and $R^5$ have the above-stated meaning,

![Chemical Structure (5)]

D) an optionally substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (5) is reacted with a substituted aminomethylene hydrochloride of the general formula (6), in which the residue $R^7$ has the above-stated meaning,

![Chemical Structure (6)]

in the presence of an acid, preferably acetyl chloride, in a suitable solvent, preferably acetonitrile, and then worked up, optionally followed by purification of the optionally substituted aminomethyl-2,3,4,5-tetrahydro-
1H-benzo[b]azepin-2,5-dione of the general formula (7), in which $R^1$, $R^2$, $R^3$, $R^4$, $R^5$ and $R^7$ have the above-stated meaning,

\[
\begin{align*}
\text{N} & \quad \text{O} \\
R^2 & \quad \text{O} \\
R^3 & \quad \text{N} \\
R^4 & \quad \text{N} \\
R^5 & \quad \text{O}
\end{align*}
\]

(7)

an optionally substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (8), in which $R^1$, $R^2$, $R^3$, $R^4$, $R^5$ and $R^6$ have the above-stated meaning and which dione combines the compounds of the general formulae (5) and (7),

\[
\begin{align*}
\text{N} & \quad \text{O} \\
R^2 & \quad \text{O} \\
R^3 & \quad \text{N} \\
R^4 & \quad \text{N} \\
R^5 & \quad \text{O}
\end{align*}
\]

(8)

is reacted with a phosphonoalkanoic acid trialkyl ester of the general formula (9), in which $n$ has the above-stated meaning and $R^n$ denotes an alkyl group, preferably a methyl or ethyl group,
in the presence of a base, preferably potassium tert-
butanolate, in a suitable solvent, preferably
dimethylformamide, and then worked up, optionally
followed by purification of the compound formed of the
formula Y-COOR'', in which R'' has the above-stated
meaning and Y denotes a residue of the general formula
Y, in which the unoccupied bond line symbolises the
bond to the residue -COOR'' and

in which R', R'', R', R', R', R' and n have the above-

stated meaning,

F) optionally an ester of the formula Y-COOR'' is reacted
in the presence of a base, preferably sodium or
potassium hydroxide, in a suitable solvent, preferably
an alcohol/water mixture, and then worked up,
optionally followed by purification of the carboxylic
acid formed of the formula Y-COOH, in which Y has the above-stated meaning,

G) optionally a carboxylic acid of the formula Y-COOH or a carboxylic acid ester of the formula Y-COOR", in which Y and R" have the above-stated meaning, is derivatised, in that

a) a carboxylic acid or carboxylic acid ester of the formula Y-COOH or Y-COOR" is reduced with the assistance of reducing agents, preferably lithium aluminium hydride, in a suitable solvent, preferably tetrahydrofuran, to the corresponding alcohol of the formula Y-CH₂-OH,

b) a carboxylic acid or carboxylic acid ester of the formula Y-COOH or Y-COOR" is reduced with the assistance of reducing agents, preferably diisobutylaluminium hydride, in a suitable solvent, preferably hexane, to the corresponding aldehyde of the formula Y-CHO or

c) an alcohol of the formula Y-CH₂-OH according to a) is reacted with a brominating agent, preferably PBr₃ or Ph₃PBr₂ (with Ph denoting phenyl residue) to yield the corresponding bromide of the formula Y-CH₂-Br

and then worked up and the product is optionally purified,

H) a compound of the formula X¹-RIV, in which X¹ has the above-stated meaning and RIV denotes a functional group, is optionally produced in that

a) 1,4-cyclohexanedione monoethylene ketal, 4-aminocyclohexan-1-one ethylene ketal or 4-oxocyclohexane carboxylic acid is reacted with
magnesium and a brominated or chlorinated, optionally substituted aromatic or heteroaromatic compound in a suitable solvent, preferably dry diethyl ether, at elevated temperature to yield the corresponding coupling product and then the ketal is optionally cleaved by reaction with hydrochloric acid in a suitable solvent, preferably tetrahydrofuran and worked up, optionally followed by purification of the product of the formula \( X^{1a}=O, X^{1a}-NHR^{1'} \) or \( X^{1a}-CO_2H \), in which \( X^{1a} \) denotes a residue of the formula \( X^{1a} \) and \( R^{1'}, R^{2'} \) and \( Z \) have the above-stated meaning and the unoccupied bond line symbolises the bond to the residue \( =O, -NHR^{1'} \) or \( -CO_2H \),

\[ \text{Diagram} \]

b) optionally a ketone of the formula \( X^{1a}=O \) is reacted in the presence of a suitable reducing agent, preferably sodium borohydride, in a suitable solvent, preferably methanol, to yield the corresponding alcohol of the formula \( X^{1a}-OH \), worked up and the product is optionally purified,

c) optionally a ketone of the formula \( X^{1a}=O \) is reacted under nitrogen in a suitable solvent, preferably tetrahydrofuran, firstly with ammonium
trifluoroacetate and then with glacial acetic acid and sodium triacetoxyporohydride, to yield the corresponding amine of the formula X^{1a}-NH_{2}, worked up and the product is optionally purified, optionally a carboxylic acid of the formula X^{1a}=CO_{2}H is activated by reaction with dicyclohexylcarbodiimide or by conversion into the carboxylic acid chloride or a mixed anhydride, reacted with diazomethane in a suitable solvent, preferably ether, and then treated with water, worked up and the product of the formula X^{1a}-CO-CH_{2}-OH is optionally purified, optionally the hydroxy group in position 4 of the cyclohexane ring in the residue X^{1a} is converted into hydrogen, a halogen, an ether, ester, alkyl, aryl or heteroaryl group, in that

\( \alpha \) in order to introduce an ether group, a compound from one of steps a)-d) is reacted with an aliphatic or cycloaliphatic compound in the presence of a suitable catalyst in a suitable solvent, preferably in the presence of sodium hydride in dimethylformamide or in the presence of potassium hydroxide in dimethyl sulfoxide, or with an alkylating agent in a suitable solvent, preferably with a diazo compound in diethyl ether, or with an aryl or heteroaryl compound in the presence of diethylazo dicarboxylate and triphenylphosphine,

\( \beta \) in order to introduce a halogen, a compound from one of steps a)-d) is reacted with a halogenating agent in a suitable solvent,
preferably with POCl₃ in dimethylformamide, with PPh₃/Cl₂, with PPh₃/Br₂, with triphenylphosphine/n-chlorosuccinimide or with HCl/ZnCl₂,

γ) in order to introduce a hydrogen, a compound from step β) is reacted with hydrogen in the presence of a suitable catalyst, preferably palladium/carbon, in a suitable solvent,

δ) in order to introduce an aliphatic or cycloaliphatic residue or an aryl or heteroaryl group, a compound from step β) is reacted with an aliphatic or cycloaliphatic boronic acid or a boronic acid ester or an aryl or heteroaryl borodihydroxide compound in the presence of palladium(II) acetate and potassium carbonate in a suitable solvent, preferably a dimethylformamide/water mixture, or

e) in order to introduce an ester group, a compound from one of steps a)-d) is reacted with a carboxylic acid chloride in the presence of a suitable catalyst in a suitable solvent and then worked up, optionally followed by purification of the compound formed of the formula X¹-R IV, in which X¹ denotes the formula X¹
and $R^2$, $R^3$ and $R^3'$ have the above-stated meaning,

I) a compound of the formula $X-R^I$, in which $X$ has the above-stated meaning and $R^I$ denotes a functional group, is optionally derivatised in that

a) a ketone of the formula $X=O$ is reacted 1) with methoxymethyl triphenylphosphinimum chloride under protective gas in a suitable solvent, preferably in dimethylformamide, in the presence of sodium hydride and then with hydrochloric acid or 2) with Me$_3$S$^+$$BF_4^-\newcommand\nbar{ar} to yield the corresponding aldehyde $X$-CHO extended by one carbon atom,

b) an aldehyde of the formula $X$-CHO according to a) is reacted with a reducing agent, preferably sodium borohydride, in a suitable solvent, preferably an ethanol/water mixture, to yield the corresponding alcohol $X$-CH$_2$-OH,

c) an alcohol C-CH$_2$-OH according to b) or of the formula $X$-OH is reacted with a brominating agent, preferably triphenylphosphine dibromide, in a suitable solvent, preferably acetonitrile, to yield the corresponding bromide of the formula $X$-CH$_2$-Br or $X$-Br,

d) a bromide of the formula $X$-CH$_2$-Br according to c) is reacted with a phosphine of the formula PR$_3$,
in which R'\textsuperscript{v} denotes an organic residue, preferably a phenyl residue, in a suitable solvent, preferably toluene, ether, tetrahydrofuran or acetone, with cooling and under protective gas to yield the corresponding phosphonium salt R'\textsuperscript{v}P'\textsuperscript{-}-CHX'\textsuperscript{-}
eq e) a bromide of the formula X-CH\textsubscript{2}-Br according to c) is reacted with a phosphite of the formula HP(O)(OR'\textsuperscript{v})\textsubscript{2}, in which R'\textsuperscript{v} denotes an organic residue, at elevated temperature, preferably 200°C, to yield the corresponding phosphonate (R'\textsuperscript{v}O)\textsubscript{2}P(O)-CH\textsubscript{2}-X and then worked up and the product is optionally purified,

J) a compound from step F) or G), in which Y has the above-stated meaning, is reacted with a compound of the formula X'\textsuperscript{1}-R'\textsuperscript{iv} from step H) or a compound X-R'\textsuperscript{iv} from step I), in which X, X'\textsuperscript{1} and R'\textsuperscript{iv} have the above-stated meaning, in that

a) a carboxylic acid of the formula Y-COOH is reacted with an amine of the formula X-NH\textsubscript{2} in the presence of a suitable condensing agent, preferably dicyclohexylcarbodiimide, 1-hydroxybenzotriazole and N-methylmorpholine, in a suitable solvent, preferably dimethylformamide, with formation of an amide bridge,

b) a carboxylic acid of the formula Y-COOH is reacted with an alcohol of the formula X-OH in the presence of a suitable condensing agent in a suitable solvent with formation of an ester bridge, the reaction preferably taking place in the presence of methylimidazole and 1-(mesitylene-2'-sulfonyl)-3-nitro-1,2,4-triazole
in tetrahydrofuran or in the presence of
dicyclohexylcarbodiimide, 1-hydroxybenzotriazole
and N-methylmorphine in dimethylformamide,
c) a bromide of the formula Y-CH₂-Br is reacted with
a compound of the formula X-CO(CH₃)p-OH, in which
p has the above-stated meaning, under protective
gas in the presence of a suitable catalyst,
preferably sodium hydride or potassium tert-
butylate, in a suitable solvent, preferably
dimethylformamide, with formation of a bridge of
the formula -CO(CH₃)p-O-CH₂-,
d) an alcohol of the formula Y-CH₂-OH is reacted
with a bromide of the formula X-Br under
protective gas in the presence of a suitable
condensing agent, preferably sodium hydride or
potassium tert-butyllate, in a suitable solvent,
preferably dimethylformamide, with formation of
an ether bridge,
e) a bromide of the formula Y-CH₂-Br is reacted with
an alcohol of the formula X-OH under protective
gas in the presence of a suitable condensing
agent, preferably sodium hydride or potassium
tert-butyllate, in a suitable solvent, preferably
dimethylformamide, with formation of an ether
bridge,
f) an aldehyde of the formula Y-CHO is reacted with
an amine of the formula X-NHR₃ in the presence
of a suitable reducing agent, preferably sodium
cyanoborohydride and sodium
triacetoxyborohydride, in a suitable solvent,
preferably a mixture of tetrahydrofuran and 1,2-
dichloroethane, with formation of an amino
bridge,
g) an aldehyde of the formula Y-CHO is reacted with a phosphonium salt R'_3P'^-CHX'^-, in which R' has the above-stated meaning, under protective gas in the presence of suitable catalysts in a suitable solvent, preferably in the presence of sodium methanolate in a mixture of hexane, diethyl ether and/or diisopropyl ether or in the presence of sodium hydride, potassium tert-butylate or a lithium amide in dimethylformamide or dimethyl sulfoxide, with formation of a -CH=CH- bridge or an aldehyde of the formula Y-CHO is reacted with a phosphonate of the formula (R'^V_O)₂P(O)-CH₂-X, in which R'^V has the above-stated meaning, under protective gas in the presence of suitable catalysts, preferably sodium methanolate, sodium hydroxide, potassium hydroxide, sodium hydride, potassium tert-butyrate or a lithium amide, in a suitable solvent, preferably dimethylformamide, dimethyl sulfoxide, diethyl ether, tetrahydrofuran, with formation of a -CH=CH- bridge and

h) optionally the -CH=CH- bridge from step g) or h) is hydrogenated by hydrogen, preferably at standard pressure or elevated pressure of up to 100 bar, in the presence of suitable catalysts, preferably transition metals or transition metal compounds, preferably palladium or the salts thereof, rhodium or the complexes thereof, in a suitable solvent, preferably dimethylformamide, methanol or ethanol, at a temperature of between 20 and 100°C with formation of a -CH₂-CH₂ bridge and then worked up and the product is optionally purified,
K) optionally the double bond in the 7-membered ring of one of the reaction products from step J) is hydrogenated by hydrogen, preferably at standard pressure or elevated pressure of up to 100 bar, in the presence of suitable catalysts, preferably transition metals or transition metal compounds, preferably palladium or the salts thereof, rhodium or the complexes thereof, in a suitable solvent, preferably dimethylformamide, methanol or ethanol, at a temperature of between 20 and 100°C and then worked up and the product is optionally purified.

The solvents and reaction conditions used correspond to the solvents and reaction conditions conventional for these types of reactions.

The starting compounds used for the synthesis of the benzo[b]azepin-2-one skeleton, i.e. succinic acid dialkyl esters of the general formula (2) and optionally substituted 2-aminobenzoic acid alkyl esters of the general formula (1), are commercially obtainable.

The reaction of succinic acid dialkyl ester and 2-aminobenzoic acid alkyl esters to yield the precursor of the benzo[b]azepin-2-one is known to the person skilled in the art from the literature as the Schotten-Baumann reaction. The reaction, which leads to ring closure and subsequent conversion to 2,3,4,5-tetrahydrofuryl-1H-benzo[b]azepin-2,5-dione is known from H.B. MacPhillamy et al., Journal of the American Chemical Society, 80, 2172 (1958) and the literature cited therein. The reaction with aminomethylene compounds is known from H. Böhme, K. Hartke, Chemische Berichte, 93, 1305 (1960) and G. Kinast, L.-F,
Tietze, Angewandte Chemie, 88, 261 (1976) and the literature cited therein. The reaction with phosphonoalkanoic acid trialkyl esters is described in G. Drefahl, K. Ponsold; H. Schick, Chemische Berichte, 97, 2011 (1964) and the literature cited therein.

The starting compounds for the synthesis of compounds with the residue X¹, 1,4-cyclohexanedione monoethylene ketal, 4-oxocyclohexane carboxylic acid and 4-aminocyclohexan-1-one ethylene ketal are known. 1,4-Cyclohexanedione monoethyl ketal and 4-oxocyclohexane carboxylic acid are commercially obtainable or may be obtained using conventional methods.
known to the person skilled in the art. 4-Aminocyclohexan-

The reactions for synthesising compounds $X^1-R^IV$ proceed according to conventional methods known to the person skilled in the art. The reaction of a cyclohexanone with a chlorinated or brominated, optionally substituted aromatic or heteroaromatic compound is known from Chem. Ber. 68, 1068 (1935), An. Quim. 64, 607 (1968) and Indian J. Biochem. 5, 79 (1968).

A modification or exchange of the hydroxy group in position 4 of the cyclohexane ring optionally takes place in the residue $X^1$. The reactions may be performed using conventional methods known to the person skilled in the art and are known from the following literature and the literature cited therein: alkylation of the hydroxy group from R.M. Bowman et al, Journal of the Chemical Society (C), 2368 (967); C.G. Neville et al, Journal of the Chemical Society, Perkin Trans, 1, 259 (1991); P. Amt et al, Chemische Berichte, 86, 951 (1953), Journal of Organic Chemistry, 52, 4665 (1987) and Tetrahedron 35, 2169 (1979), arylation or heteroarylation of the hydroxy group from Journal of the American Chemical Society, 107, 3891 (1985), the introduction of a halogen from Journal of the American Chemical Society, 76, 6073 (1954) and Journal of the American Chemical Society, 86, 964 (1964), Journal of the Chemical Society, 636 (1943), Journal of the American Chemical Society, 106, 3286 (1984), Journal of the Chemical Society, 1 2281 (1954) and Synthesis, 746 (1980), the introduction of an alkyl, aryl or heteroaryl residue from

Compounds $X$-OH, $X$-NHR′, $X$-CO(CH$_2$)$_n$OH and $X$=O are known from the literature or may be produced from known commercially obtainable compounds using conventional, methods known to
the person skilled in the art or using methods, such as are described in German patent application P100494811.

Linkage of the residue X with the benzo[b]azepin-2-one skeleton via the bridge A may proceed using conventional methods known to the person skilled in the art and is known
from the following literature and the literature in each case cited therein: the reaction of carboxylic acids with alcohols or amines in the presence of dicyclohexylcarbodiimide from W. König, R. Geiger, Chem.

The corresponding literature descriptions are hereby introduced as a reference and are deemed to be part of the disclosure.

The substituted benzo[b]azepin-2-one compounds according to the invention of the general formulae I and II and in each case the tautomers and corresponding stereoisomers thereof may be isolated both in the form of the free bases thereof and in the form of corresponding salts.
The free bases of the respective compounds according to the invention of the general formulae I and II, the tautomers and corresponding stereoisomers thereof may be converted into the corresponding physiologically acceptable salts by reaction with an inorganic or organic acid, preferably with hydrochloric acid, hydrobromic acid, sulfuric acid, phosphoric acid, methanesulfonic acid, p-toluenesulfonic acid, carbonic acid, formic acid, acetic acid, oxalic acid, succinic acid, tartaric acid, mandelic acid, fumaric acid, lactic acid, citric acid, glutamic acid or aspartic acid. The free bases of the respective compounds according to the invention of the general formulae I or II, the tautomers and corresponding stereoisomers thereof may likewise preferably be converted into the corresponding hydrochlorides by combining the compounds according to the invention of the general formulae I or II dissolved in a suitable organic solvent, such as for example butane-2-one (methyl ethyl ketone), the tautomers and corresponding stereoisomers thereof as free bases with trimethylsilyl chloride (TMSCl).

The free bases of the respective compounds according to the invention of the general formulae I or II, the tautomers and corresponding stereoisomers thereof may be converted into the corresponding physiologically acceptable salts with the free acid or a salt of a sugar substitute, such as for example saccharin, cyclamate or acesulfame.

The compounds according to the invention of the general formulae I and II, the tautomers and in each case corresponding stereoisomers thereof may optionally, like the corresponding acids, the corresponding bases or salts
of these compounds, also be obtained in the form of the
solvates thereof, preferably the hydrates thereof.

If the substituted benzo[b]azepin-2-one compounds according
to the invention of the general formulae I and II and the
tautomers thereof are obtained by the production process
according to the invention in the form of stereoisomers,
preferably in the form of the racemates thereof or other
mixtures of their various enantiomers and/or diastereomers,
these may be separated and optionally isolated by
conventional processes known to the person skilled in the
art. Examples are chromatographic separation processes, in
particular liquid chromatography processes at standard
pressure or at elevated pressure, preferably MPLC and HPLC
processes, and fractional crystallisation processes.
Individual enantiomers, e.g. diastereomeric salts formed by
means of HPLC on a chiral phase or by means of
crystallisation with chiral acids, such as (+)-tartaric
acid, (-)-tartaric acid or (+)-10-camphorsulfonic acid, may
here in particular be separated from one another.

The substituted benzo[b]azepin-2-one compounds according to
the invention of the general formulae I and II, the
tautomers and corresponding stereoisomers thereof as well
as in each case the corresponding bases, salts and solvates
are toxicologically safe and are therefore suitable as
pharmaceutical active ingredients in pharmaceutical
preparations.

The present invention accordingly further provides
pharmaceutical preparations, which contain at least one
substituted benzo[b]azepin-2-one compound according to the
invention of the general formulae I or II and/or a
corresponding tautomer, optionally in the form of the
racemate thereof, the pure stereoisomer thereof, in
particular enantiomer or diastereomer, or in the form of
mixtures of the stereoisomers, in particular the
enantiomers or diastereomers, in any desired mixing ratio
or in each case in the form of the acid or bases thereof or
in the form of the salt thereof, in particular the
physiologically acceptable salt, or in the form of the
solvate thereof, in particular the hydrate, optionally
together with physiologically acceptable auxiliary
substances. It goes without saying that the pharmaceutical
preparations according to the invention may also comprise
mixtures of two or more of the above-stated compounds
according to the invention.

If the substituted benzo[b]azepin-2-one compounds according
to the invention of the general formulae I and II or the
tautomers thereof or the corresponding salts, bases or
solvates thereof are chiral, they may, as stated above, be
present in the pharmaceutical preparation according to the
invention in the form of the racemates thereof, the pure
enantiomers thereof, the pure diastereomers thereof or in
the form of a mixture of at least two of the above-
mentioned stereoisomers.

The pharmaceutical preparations according to the invention
are preferably suitable for the combatting of pain,
preferably of chronic or neuropathic pain, and for the
treatment or prevention of neurodegenerative diseases,
preferably Alzheimer's disease, Huntington's chorea or
Parkinson's disease, stroke, cerebral infarct, cerebral
ischaemia, cerebral oedema, insufficiency states of the
central nervous system, preferably hypoxia or anoxia,
epilepsy, schizophrenia, psychoses brought about by elevated amino acid levels, AIDS dementia, encephalomyelitis, Tourette's syndrome, perinatal asphyxia, tinnitus, migraine, inflammatory and/or allergic reactions, depression, mental health conditions, urinary incontinence, pruritus or diarrhoea or for anxiolysis or anaesthesia.

The present invention also provides the use of at least one substituted benzo[b]azepin-2-one compound of the general formulae I or II or a tautomer, optionally in the form of the racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in the form of the solvate thereof, in particular the hydrate, for the production of a pharmaceutical preparation for the combatting of pain, preferably of chronic or neuropathic pain, and for the treatment or prevention of neurodegenerative diseases, preferably Alzheimer's disease, Huntington's chorea or Parkinson's disease, stroke, cerebral infarct, cerebral ischaemia, cerebral oedema, insufficiency states of the central nervous system, preferably hypoxia or anoxia, epilepsy, schizophrenia, psychoses brought about by elevated amino acid levels, AIDS dementia, encephalomyelitis, Tourette's syndrome, perinatal asphyxia, tinnitus, migraine, inflammatory and/or allergic reactions, depression, mental health conditions, urinary incontinence, pruritus or diarrhoea or for anxiolysis or anaesthesia.
The pharmaceutical preparations according to the invention may be present as liquid, semisolid or solid dosage forms, for example in the form of solutions for injection, drops, succi, syrups, sprays, suspensions, tablets, patches, capsules, transdermal delivery systems, suppositories, ointments, creams, lotions, gels, emulsions, aerosols or in multiparticulate form, for example in the form of pellets or granules, and also be administered as such.

In addition to at least one substituted benzo[b]azepin-2-one compound according to the invention of the general formulae I or II and/or a corresponding tautomer, optionally in the form of the racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in the form of the solvate thereof, in particular the hydrate, the pharmaceutical preparations according to the invention conventionally contain further physiologically acceptable pharmaceutical auxiliary substances, which are preferably selected from the group consisting of matrix materials, fillers, solvents, diluents, surface-active substances, dyes, preservatives, suspending agents, slip agents, lubricants, aromas and binders.

Selection of the physiologically acceptable auxiliary substances and the quantities thereof which are to be used depends upon whether the pharmaceutical preparation is to be administered orally, subcutaneously, parenterally,
intravenously, intraperitoneally, intradermally, intramuscularly, intranasally, buccally, rectally or topically, for example onto infections of the skin, mucous membranes or eyes. Preparations in the form of tablets, coated tablets, capsules, granules, pellets, drops, succi and syrups are preferred for oral administration, while solutions, suspensions, readily reconstitutable dried preparations and sprays are preferred for parenteral, topical and inhalatory administration. Compounds according to the invention of the general formulae I or II or the tautomers thereof, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates, in a depot in dissolved form or in a dressing, optionally with the addition of skin penetration promoters, are suitable percutaneous administration preparations. Orally or percutaneously administrable formulations may also release the compounds according to the invention in delayed manner.

Production of the pharmaceutical preparations according to the invention proceeds with the assistance of conventional means, devices, methods and processes known to the person skilled in the art, such as are described for example in "Remington's Pharmaceutical Sciences", ed. A.R. Gennaro, 17th ed., Mack Publishing Company, Easton, Pa. (1985), in particular in part 8, chapters 76 to 93. The corresponding
literature description is hereby introduced as a reference and is deemed to be part of the disclosure.

The quantity to be administered to the patient of the respective substituted benzo[b]azepin-2-one compound according to the invention of the general formulae I or II or of a tautomer thereof, optionally in the form of the racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in the form of the solvate thereof, in particular the hydrate, may vary and is for example dependent on the weight or age of the patient and on the mode of administration, the indication and the severity of the complaint. Conventionally, at least one compound according to the invention is administered in a quantity of 0.005 to 500 mg/kg, preferably of 0.05 to 5 mg/kg, of patient body weight.

The investigation into analgesic efficacy was performed by phenylquinone-induced writhing in mice (modified after: I.C. Hendershot, J. Forsaith, J. Pharmacol. Exp. There. 125, 237-240 (1959)). The corresponding literature description is hereby introduced as a reference and is deemed to be part of the disclosure.

Male NMRI mice weighing from 25 to 30 g were used for this purpose. Groups of 10 animals per substance dose received, 10 minutes after intravenous administration of the compounds tested, 0.3 ml/mouse of a 0.02% aqueous solution
of phenylquinone (phenylbenzoquinone, Sigma, Deisenhofen; solution prepared with addition of 5% of ethanol and stored in a water bath at 45°C) administered intraperitoneally. The animals were placed individually in observation cages.

A push button counter was used to record the number of pain-induced stretching movements (writhing reactions = straightening of the torso with stretching of the rear extremities) for 5-20 minutes after phenylquinone administration. The control was provided by animals who received only physiological common salt solution.

The compounds were tested at the standard dosage of 10 mg/kg. Inhibition of the writhing reactions by a substance was calculated according to the following formula:

\[
\text{% Inhibition} = 100 - \left( \frac{\text{Writhing reaction, treated animals}}{\text{Writhing reaction, control}} \right) \times 100
\]

The invention is explained below with reference to Examples. These explanations are given merely by way of example and do not restrict the general concept of the invention.
Examples

The yields of the example compounds according to the invention were not optimised.

Example 1:

Synthesis of 2'-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid

1st step:

N-acylation of 2-amino-4-chlorobenzoic acid methyl ester with succinic acid methyl ester chloride in pyridine yielded N-(2-carbomethoxy-5-chlorophenyl) succinic acid methyl ester amide with a yield of 90%. The melting point of the compound was 95-96°C.

2nd step:

40 g (133 mmol) of N-(2-carbomethoxy-5-chlorophenyl) succinic acid methyl ester were reacted in THF in the presence of potassium tert-butanolate for 5 hours at room temperature to yield 8-chloro-5-hydroxy-2-oxo-2,3-dihydro-
1H-benzo[b]azepin-4-carboxylic acid methyl ester. The yield was 81%.

3rd step:

30.0 g (0.11 mol) of 8-chloro-5-hydroxy-2-oxo-2,3-dihydro-1H-benzo[b]azepin-4-carboxylic acid methyl ester were heated in DMSO/H_2O (9:1) to 150°C for 6 hours. The yield of 8-chloro-2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione amounted to 83%.

4th step:

6.0 g (28.6 mmol) of 8-chloro-2,2,1,5-tetrahydro-1H-benzo[b]azepin-2,5-dione were reacted with 7.7 (34.3 mmol) of phosphonoacetic acid triethyl ester and 3.85 (34.34 mmol) of potassium tert-butanolate in DMF for 8 hours at 65°C under argon. 2'-(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid ethyl ester was obtained as a yellow oil with a yield of 4.23 g (53%).
5th step:

4.23 g (15 mmol) of 2'-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid ethyl ester was saponified with 5% aqueous KOH for 4 hours at room temperature. After acidification of the solution, 2'-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid precipitated as a light yellow precipitate. The precipitate was separated, washed with water and diethyl ether and dried. The yield was 2.27 mg (60%).

Example 2:

Synthesis of 2'-(8-chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid

Preparation of the compound proceeded in a manner similar to Example 1 with 2-(N-methylamino)-4-chlorobenzoic acid methyl ester as educt.
Example 3:

Synthesis of 8-chloro-4-(N,N-dimethylaminomethyl)-2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione hydrochloride

8-Chloro-2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione was reacted with N,N-dimethylaminomethylene hydrochloride in acetonitrile with acid catalysis with acetyl chloride for 5 hours at 20°C. The yield of 8-chloro-4-(N,N-dimethylaminomethyl)-2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione hydrochloride was 85%. The compound was obtained as a yellow, fine crystalline substance.

Example 4:

Synthesis of 2'-(8-chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester

2'-(8-Chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-O-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-
methoxyphenyl)cyclohexyl] acetate was obtained by esterification of 352 mg (1.32 mmol) of 2′-(8-chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid with 370 mg (1.32 mmol) of 2-(N,N-dimethylaminomethyl)-1-(m-methoxyphenyl)cyclohexane-1,4-diol in the presence of 82 mg (1.0 mmol) of 1-methylimidazole and 340 mg (1.32 mmol) 1-(mesitylene-2'-sulfonyl)-3-nitro-1,2,4-triazole in methylene chloride for 48 hours at 20°C. The reaction product was purified by means of column chromatography (chloroform/methanol, 95:5). The product was obtained as a colourless substance with a yield of 378 mg (54%).

Example 5:

Synthesis of 2′-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester

![Chemical structure]

2′-(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-O-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] acetate was prepared in a manner similar to Example 4 from 2-(N,N-dimethylaminomethyl)-1-(m-
methoxyphenyl)cyclohexane-1,4-diol and 2\''-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid. The yield was 503 mg (65%). The compound had a melting point of 105-110°C.

Example 6:

Synthesis of 2\''-(8-chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3\''-(N,N-dimethylaminomethyl)-4\''-hydroxy-4\''-(m-methoxyphenyl)cyclohexyl]acetamide

314 mg (1.13 mmol) of 4-amino-2-(N,N-dimethylaminomethyl)-1-(m-methoxyphenyl)-cyclohexan-1-ol and 300 mg (1.13 mmol) of 2\''-(8-chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid were reacted in 15 ml of DMF in the presence of 443 mg (2.14 mmol) of dicyclohexylcarbodiimide, 217 ml (2.14 mmol) of N-methylmorpholine and 290 mg (2.14 mmol) of 1-hydroxybenzotriazole to yield the amide. The product was purified using column chromatography (ethyl acetate/methanol/acetic acid, 60:38:2). The yield was 443 mg (75%).
Example 7:

Synthesis of 2′-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl]acetamide

2′-(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl]acetamide was produced in a manner similar to Example 6 from 4-amino-2-(N,N-dimethylaminomethyl)-1-(m-methoxyphenyl)cyclohexan-1-ol and 2′-(8-chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl) acetic acid. The yield was 40%. The amide had a melting point of 205-210°C.
Pharmacological investigations

Analgesic testing by writhing test in mice:

The in-depth investigation into analgesic efficacy was performed using phenylquinone-induced writhing in mice, as described above.

The investigated compounds according to the invention exhibited an analgesic action. The results of selected writhing investigations are summarised in Table 1 below.

Claims

1. substituted benzo[b]azepin-2-one compounds of the general formulae I and II and in each case the tautomers thereof,

\[
\begin{align*}
&\text{I} & &\text{II}
\end{align*}
\]

in which

\[R^1, R^2, R^3 \text{ and } R^4,\] identical or different, denote a linear or branched, saturated or unsaturated aliphatic C\(_{1-10}\) residue or a saturated or unsaturated cycloaliphatic C\(_{3-7}\) residue, wherein each of the above-stated residues may optionally be joined together via an ether bridge, or hydrogen, a halogen or a hydroxy group,

\[R^5\] denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic C\(_{1-10}\) residue, an aryl or a heteroary1 residue,

\[R^6\] denotes hydrogen or a residue of the formula \(-\text{CH}_2-\text{NR}_2^+\), wherein the two residues are identical or different and have the meaning stated below or may form a 3-8-membered ring together with the nitrogen atom connecting them as a ring member,
R^7 denotes a linear or branched, saturated or unsaturated aliphatic C_{1-6} residue or a saturated or unsaturated cycloaliphatic C_{3-6} residue,

A denotes a bridge with one of the following formulae:
- (CH\_2\_n\_+2\^\-), -(CH\_2\_n\_CH=CH\^\-), -(CH\_2\_n\_COO\^\-), -(CH\_2\_n\_CONH\^\-), -(CH\_2\_n\_+1\_O(CH\_2\_p\_CO\^\-)\_n\_+1\_O\^\-), -(CH\_2\_n\_+1\_NR\_n\_+1\^\-)- in which n denotes 0, 1, 2, or 3, and p denotes 0 or 1, R\_n\_+1\^\- has the meaning stated hereinafter and the bond to the residue X is always stated last and wherein bonding of the residues X\_17\^\- and X\_18\^\- is possible only via the three bridges stated first,

and X denotes one of the following residues of the general formulae X\_1\^\+ to X\_18\^\+, in which the unoccupied bond line symbolises the bond to the bridge A and
in which
R\textsuperscript{11} denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic C\textsubscript{1-10} residue, a saturated or unsaturated cycloaliphatic C\textsubscript{3-7} residue, an aryl or heteroaryl residue,

R\textsuperscript{2'} denotes a linear or branched, saturated or unsaturated aliphatic C\textsubscript{1-10} residue, a saturated or unsaturated cycloaliphatic C\textsubscript{3-7} residue or an aryl or heteroaryl residue wherein all above-stated residues may optionally be joined via an ether, thioether or SO\textsubscript{2} bridge, or hydrogen, a halogen, a hydroxy, thiol, cyano or nitro group or a group of the formula -NR\textsubscript{1}\textsuperscript{12}, wherein the two residues
"l" are identical or different and have the above-stated meaning,

R³" denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₁₀ residue, a saturated or unsaturated cycloaliphatic C₃₋₇ residue, an aryl or heteroaryl residue, wherein all the above-stated residues may optionally be joined via an ether or an ester bridge, hydrogen, a halogen, a hydroxy group,

R⁴" denotes hydrogen, an aryl or heteroaryl residue, wherein the aryl or heteroaryl residue may comprise at least one substituent R²" with the above meaning, with the exception of hydrogen,

R⁵" denotes a residue of the formula -NR⁶"₂, wherein the two residues R⁶" may be identical or different and have the meaning stated hereinafter or may form a 3-7-membered ring together with the nitrogen atom connecting them as a ring member, which ring may optionally contain at least one oxygen and/or at least one further nitrogen as a ring atom, wherein the nitrogen may comprise a substituent R¹" with the meaning stated hereinafter,

R⁶" denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₆ residue, a saturated or unsaturated or cycloaliphatic C₃₋₇ residue, an aryl or heteroaryl residue,

R⁷" denotes a cyano, amide or carboxylic acid residue,
R\(^8\) denotes a residue of the formula \(-\text{NR}^{9'}_2\), wherein the two residues R\(^8\) may be identical or different and have the meaning stated hereinafter or may form a 3-7-membered ring together with the nitrogen atom connecting them as a ring member, which ring may optionally contain at least one oxygen and/or at least one further nitrogen as a ring atom,

R\(^9\) denotes hydrogen, a linear or branched aliphatic C\(_{1-10}\) residue,

R\(^{10}\) denotes hydrogen, a linear or branched, saturated or unsaturated aliphatic C\(_{1-10}\) residue, an aryl or heteroaryl residue and

Z denotes at least one optionally present oxygen, sulfur or nitrogen as a ring atom,

and q denotes 0, 1, 2 or 3,

optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

2. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R\(^2\) and R\(^3\), identical or
different, denote a linear or branched, saturated or unsaturated aliphatic C\textsuperscript{1-3} residue or a halogen and R\textsuperscript{1} and R\textsuperscript{4} in each case denote hydrogen, R\textsuperscript{5} denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic C\textsubscript{1-3} residue and R\textsuperscript{6} denotes hydrogen or a residue of the formula -CH\textsubscript{2}-NR\textsuperscript{7}\textsubscript{2}, in which R\textsuperscript{7} denotes a linear or branched, saturated or unsaturated aliphatic C\textsubscript{1-3} residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

3. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R\textsuperscript{2} and R\textsuperscript{3} in each case denote a methyl group or a chlorine and R\textsuperscript{1} and R\textsuperscript{4} in each case denote hydrogen, R\textsuperscript{5} denotes hydrogen or a methyl group and R\textsuperscript{6} denotes hydrogen or a residue of the formula -CH\textsubscript{2}-N(CH\textsubscript{3})\textsubscript{2}, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.
4. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R³ denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue or a halogen and R¹, R² and R⁴ in each case denote hydrogen, R⁵ denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue and R⁶ denotes hydrogen or a residue of the formula -CH₂-N(R⁷)₂, in which R⁷ denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

5. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R³ denotes a methyl group or a chlorine and R¹, R² and R⁴ in each case denote hydrogen, R⁵ denotes hydrogen or a methyl group and R⁶ denotes hydrogen or a residue of the formula -CH₂-N(CH₃)₂, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or
bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

6. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R¹ and R³, identical or different, denote a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue or a halogen and R² and R⁴ in each case denote hydrogen, R⁵ denotes hydrogen or a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue and R⁶ denotes hydrogen or a residue of the formula \(-\text{CH}_2-\text{NR}^7_2\), in which R⁷ denotes a linear or branched, saturated or unsaturated aliphatic C₁₋₃ residue, optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

7. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to claim 1, characterised in that R¹ and R³ in each case denote a methyl group or a chlorine and R² and R⁴ in each case denote hydrogen, R⁵ denotes hydrogen or a methyl group and R⁶ denotes hydrogen or a residue of the formula \(-\text{CH}_2-\text{N(CH}_3)_2\), optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular
enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

8. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to one of claims 1-7, characterised in that A denotes a bridge of the formula -CH₂-COO- or -CH₂CONH- optionally in form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

9. Substituted benzo[b]azepin-2-one compounds and in each case the tautomers thereof according to one of claims 1-8, characterised in that X denotes a residue of the following formula:
optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

10. Substituted benzo[b]azepin-2-one compounds and the tautomers thereof according to claim 1:

15  2'-[(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester,

20  2'-[(8-Chloro-1-methyl-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)acetic acid [3"-(N,N-dimethylaminomethyl)-4"-hydroxy-4"-(m-methoxyphenyl)cyclohexyl] ester,
2'-(8-Chloro-2-oxo-2,3-dihydro-1H-benzo[b]azepin-5-yl)-N-[3''-(N,N-dimethylaminomethyl)-4''-hydroxy-4''-(m-methoxyphenyl)cyclohexyl]acetamide,

optionally in the form of the racemates thereof, the pure stereoisomers thereof, in particular enantiomers or diastereomers, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acids or bases thereof or in the form of the salts thereof, in particular physiologically acceptable salts, or in the form of the solvates thereof, in particular hydrates.

11. A process for the production of substituted benzo[b]azepin-2-one compounds, the tautomers and corresponding stereoisomers thereof according to one of claims 1-10, characterised in that

A) an optionally substituted 2-aminobenzoic alkyl ester of the general formula (1), in which R₁, R₂, R₃, R⁴ and R⁵ have the same meaning as in one of claims 1-7 and R denotes an alkyl group, preferably a methyl or ethyl group,
is reacted with succinic acid dialkyl ester of the general formula (2), in which \( R' \) denotes an alkyl group, preferably a methyl or ethyl group and \( R^x \) denotes chlorine or an alkoxy group, preferably a methoxy or ethoxy group,

\[
\begin{align*}
\text{(2)} \\
\end{align*}
\]

under suitable reaction conditions, in a suitable solvent, preferably pyridine, and is then worked up, optionally followed by purification of the optionally substituted \( N-(2\text{-carbalkoxyphenyl})\)succinic acid alkyl ester amide formed of the general formula (3), in which \( R, R', R^1, R^2, R^3, R^4 \) and \( R^5 \) have the above-stated meaning,
B) an optionally substituted N-(2-carboalkoxyphenyl)succinic acid alkyl ester amide of the general formula (3) is reacted in the presence of potassium tert-butanolate in a suitable solvent and then worked up, optionally followed by purification of the optionally substituted 5-hydroxy-2-oxo-2,3-dihydro-1H-benzo[b]azepin-4-carboxylic acid alkyl ester formed of the general formula (4), in which $R'$, $R^1$, $R^2$, $R^3$, $R^4$ and $R^5$ have the above-stated meaning,

\[
(3)
\]

\[
(4)
\]

C) an optionally substituted 5-hydroxy-2-oxo-2,3-dihydro-1H-benzo[b]azepin-4-carboxylic acid alkyl ester of the general formula (4) is reacted in a dimethyl sulfoxide/water mixture at elevated temperature and then worked up, optionally followed by purification of the optionally
substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (5), in which R¹, R², R³, R⁴ and R⁵ have the above-stated meaning,

![Chemical Structure](attachment:image.png)

D) an optionally substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (5) is reacted with a substituted aminomethylene hydrochloride of the general formula (6), in which the residue R⁷ has the meaning stated in claim 1,

![Chemical Structure](attachment:image.png)

in the presence of an acid, preferably acetyl chloride, in a suitable solvent, preferably acetonitrile, and then worked up, optionally followed by purification of the optionally substituted aminomethyl-2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (7), in which R¹, R², R³, R⁴, R⁵ and R⁷ have the above-stated meaning,
E) an optionally substituted 2,3,4,5-tetrahydro-1H-benzo[b]azepin-2,5-dione of the general formula (8), in which \( R^1, R^2, R^3, R^4, R^5 \) and \( R^6 \) have the same meaning as in one of claims 1-7 and which combines the compounds of the general formulae (5) and (7),

is reacted with a phosphonoalkanoic acid trialkyl ester of the general formula (9), in which \( n \) has the same meaning as in claim 1 and \( R'' \) denotes an alkyl group, preferably a methyl or ethyl group,

in the presence of a base, preferably potassium tert-butanolate, in a suitable solvent,
preferably dimethylformamide, and then worked up, optionally followed by purification of the compound formed of the formula \( Y\text{-COOR}'' \), in which \( R'' \) has the above-stated meaning and \( Y \) denotes a residue of the general formula \( Y \), in which the unoccupied bond line symbolises the bond to the residue \(-\text{COOR}''\) and

![Chemical Structure](image)

in which \( R^1, R^2, R^3, R^4, R^5, R^6 \) and \( n \) have the above-stated meaning.

F) optionally an ester of the formula \( Y\text{-COOR}'' \) is reacted in the presence of a base, preferably sodium or potassium hydroxide, in a suitable solvent, preferably an alcohol/water mixture, and then worked up, optionally followed by purification of the carboxylic acid formed of the formula \( Y\text{-COOH} \), in which \( Y \) has the above-stated meaning,

G) optionally a carboxylic acid of the formula \( Y\text{-COOH} \) or a carboxylic acid ester of the formula \( Y\text{-COOR}'' \), in which \( Y \) and \( R'' \) have the above-stated meaning, is derivatised, in that
a) a carboxylic acid or carboxylic acid ester of the formula Y-COOH or Y-COOR" is reduced with the assistance of reducing agents, preferably lithium aluminium hydride, in a suitable solvent, preferably tetrahydrofuran, to the corresponding alcohol of the formula Y-CH₂-OH,

b) a carboxylic acid or carboxylic acid ester of the formula Y-COOH or Y-COOR" is reduced with the assistance of reducing agents, preferably diisobutylaluminium hydride, in a suitable solvent, preferably hexane, to the corresponding aldehyde of the formula Y-CHO or

c) an alcohol of the formula Y-CH₂-OH according to a) is reacted with a brominating agent, preferably PBr₃ or Ph₃PBr₂ to yield the corresponding bromide of the formula Y-CH₂-Br

and then worked up and the product is optionally purified,

H) a compound of the formula Xᴵ⁻R⁴⁺, in which Xᴵ has the above-stated meaning and R⁴⁺ denotes a functional group, is optionally produced in that

a) 1,4-cyclohexanedione monoethylene ketal, 4-amino cyclohexan-1-one ethylene ketal or 4-oxocyclohexane carboxylic acid is reacted with magnesium and a brominated or chlorinated, optionally substituted aromatic or heteroaromatic compound in a suitable solvent, preferably dry diethyl ether, at
elevated temperature to yield the corresponding coupling product and then the ketal is optionally cleaved by reaction with hydrochloric acid in a suitable solvent, preferably tetrahydrofuran and worked up, optionally followed by purification of the product of the formula $X^{1a}=O$, $X^{1a}-NHR^1'$ or $X^{1a}-CO_2H$, in which $X^{1a}$ denotes a residue of the formula $X^{1a}$ and $R^1'$, $R^2'$ and $Z$ have the above-stated meaning and the unoccupied bond line symbolises the bond to the residue $=O$, $-NHR^1'$ or $-CO_2H$,

\[
\begin{align*}
Z & \quad R^{2'} \\
& \quad HO \\
& \quad X^{1a}
\end{align*}
\]

b) optionally a ketone of the formula $X^{1a}=O$ is reacted in the presence of a suitable reducing agent, preferably sodium borohydride, in a suitable solvent, preferably methanol, to yield the corresponding alcohol of the formula $X^{1a}-OH$, worked up and the product is optionally purified,

c) optionally a ketone of the formula $X^{1a}=O$ is reacted under nitrogen in a suitable solvent, preferably tetrahydrofuran, firstly with ammonium trifluoroacetate and then with glacial acetic acid and sodium triacetoxyc...
borohydride, to yield the corresponding amine of the formula $X^{1a}$-NH$_2$, worked up and the product is optionally purified,

d) optionally a carboxylic acid of the formula $X^{1a}$-CO$_2$H is activated by reaction with dicyclohexylcarbodiimide or by conversion into the carboxylic acid chloride or a mixed anhydride, reacted with diazomethane in a suitable solvent, preferably ether, and then treated with water, worked up and the product of the formula $X^{1a}$-CO-CH$_2$-OH is optionally purified,

e) optionally the hydroxy group in position 4 of the cyclohexane ring in the residue $X^{1a}$ is converted into hydrogen, a halogen, an ether, ester, alkyl, aryl or heteroaryl group, in that

a) in order to introduce an ether group, a compound from one of steps a)-d) is reacted with an aliphatic or cycloaliphatic compound in the presence of a suitable catalyst in a suitable solvent, preferably in the presence of sodium hydride in dimethylformamide or in the presence of potassium hydroxide in dimethyl sulfoxide, or with an alkylating agent in a suitable solvent, preferably with a diazo compound in diethyl ether, or with an aryl or heteroaryl compound in the presence of diethylazodicarboxylate and triphenylphosphine,
\( \beta \) in order to introduce a halogen, a compound from one of steps a)-d) is reacted with a halogenating agent in a suitable solvent, preferably with \( \text{POCl}_3 \) in dimethylformamide, with \( \text{PPh}_3/\text{Cl}_2 \), with \( \text{PPh}_3/\text{Br}_2 \), with triphenylphosphine/n-chlorosuccinimide or with \( \text{HCl/ZnCl}_2 \),

\( \gamma \) in order to introduce a hydrogen, a compound from step \( \beta \) is reacted with hydrogen in the presence of a suitable catalyst, preferably palladium/carbon, in a suitable solvent,

\( \delta \) in order to introduce an aliphatic or cycloaliphatic residue or an aryl or heteroaryl group, a compound from step \( \beta \) is reacted with an aliphatic or cycloaliphatic boronic acid or a boronic acid ester or an aryl or heteroaryl borodihydroxide compound in the presence of palladium(II) acetate and potassium carbonate in a suitable solvent, preferably a dimethylformamide/water mixture, or

\( \epsilon \) in order to introduce an ester group, a compound from one of steps a)-d) is reacted with a carboxylic acid chloride in the presence of a suitable catalyst in a suitable solvent and then worked up, optionally followed by purification of the compound formed of the formula \( X^1-R^IV \), in which \( X^1 \) denotes the formula \( X^1 \)
and $R^{IV}$, $R^{2'}$ and $R^{3'}$ have the above-stated meaning.

5 I) a compound of the formula $X-R^{IV}$, in which $X$ has the above-stated meaning and $R^{IV}$ denotes a functional group, is optionally derivatised in that

a) a ketone of the formula $X=O$ is reacted

10 with methoxymethyl triphenylphosphinium chloride under protective gas in a suitable solvent, preferably in dimethylformamide, in the presence of sodium hydride and then with hydrochloric acid or 2) with $Me_3S^+BF_4^-$ to yield the corresponding aldehyde $X$-CHO extended by one carbon atom,

b) an aldehyde of the formula $X$-CHO according to a) is reacted with a reducing agent, preferably sodium borohydride, in a suitable solvent, preferably an ethanol/water mixture, to yield the corresponding alcohol $X$-CH$_2$-OH,

c) an alcohol C-CH$_2$-OH according to b) or of the formula $X$-OH is reacted with a brominating agent, preferably triphenylphosphine dibromide, in a suitable
solvent, preferably acetonitrile, to yield the corresponding bromide of the formula X-CH₂-Br or X-Br,

d) a bromide of the formula X-CH₂-Br according to c) is reacted with a phosphine of the formula \( PR'_3 \), in which \( R' \) denotes an organic residue, preferably a phenyl residue, in a suitable solvent, preferably toluene, ether, tetrahydrofuran or acetone, with cooling and under protective gas to yield the corresponding phosphonium salt \( R'_3P'-CHX \) or

e) a bromide of the formula X-CH₂-Br according to c) is reacted with a phosphite of the formula \( HP(O)(OR'^{VI})_2 \), in which \( R'^{VI} \) denotes an organic residue, at elevated temperature, preferably 200°C, to yield the corresponding phosphonate \( (R'^{VI}O)_2P(O)-CH₂-X \) and then worked up and the product is optionally purified,

a compound from step F) or G), in which \( Y \) has the above-stated meaning, is reacted with a compound of the formula \( X^1-R'^{IV} \) from step H) or a compound \( X-R'^{IV} \) from step I), in which \( X, X^1 \) and \( R'^{IV} \) have the above-stated meaning, in that

a) a carboxylic acid of the formula \( Y-COOH \) is reacted with an amine of the formula \( X-NH₂ \) in the presence of a suitable condensing agent, preferably dicyclohexylcarbodiimide, 1-hydroxybenzotriazole and N-methylmorphine, in a suitable solvent, preferably dimethylformamide, with formation of an amide bridge,
b) a carboxylic acid of the formula Y-COOH is reacted with an alcohol of the formula X-OH in the presence of a suitable condensing agent in a suitable solvent with formation of an ester bridge, the reaction preferably taking place in the presence of methylimidazole and 1-((mesitylene-2'-sulfonyl)-3-nitro-1,2,4-triazole in tetrahydrofuran or in the presence of dicyclohexylcarbodiimide, 1-hydroxybenzotriazole and N-methylmorphine in dimethylformamide,

c) a bromide of the formula Y-CH₂-Br is reacted with a compound of the formula X-CO(CH₂)ₚ-OH, in which p has the above-stated meaning, under protective gas in the presence of a suitable catalyst, preferably sodium hydride or potassium tert-butyllate, in a suitable solvent, preferably dimethylformamide, with formation of a bridge of the formula \(-CO(CH₂)ₚ-0-CH₂\),

d) an alcohol of the formula Y-CH₂-OH is reacted with a bromide of the formula X-Br under protective gas in the presence of a suitable condensing agent, preferably sodium hydride or potassium tert-butyllate, in a suitable solvent, preferably dimethylformamide, with formation of an ether bridge,

e) a bromide of the formula Y-CH₂-Br is reacted with an alcohol of the formula X-OH under protective gas in the presence of a suitable condensing agent, preferably sodium hydride
or potassium tert-butylate, in a suitable solvent, preferably dimethylformamide, with formation of an ether bridge,

f) an aldehyde of the formula Y-CHO is reacted with an amine of the formula X-NHR' in the presence of a suitable reducing agent, preferably sodium cyanoborohydride and sodium triacetoxyborohydride, in a suitable solvent, preferably a mixture of tetrahydrofuran and 1,2-dichloroethane, with formation of an amino bridge,

g) an aldehyde of the formula Y-CHO is reacted with a phosphonium salt R"_2'P^+-CHX^-, in which R" has the above-stated meaning, under protective gas in the presence of suitable catalysts in a suitable solvent, preferably in the presence of sodium methanolate in a mixture of hexane, diethyl ether and/or diisopropyl ether or in the presence of sodium hydride, potassium tert-butylate or a lithium amide in dimethylformamide or dimethyl sulfoxide, with formation of a -CH=CH- bridge or

h) an aldehyde of the formula Y-CHO is reacted with a phosphonate of the formula \( (R"'O)_2P(O)\cdot CH_2-X \), in which R"' has the above-stated meaning, under protective gas in the presence of suitable catalysts, preferably sodium methanolate, sodium hydroxide, potassium hydroxide, sodium hydride, potassium tert-butylate or a lithium amide, in a suitable solvent, preferably dimethylformamide, dimethyl
sulfoxide, diethyl ether, tetrahydrofuran, with formation of a -CH=CH- bridge and
i) optionally the -CH=CH- bridge from step g) or h) is hydrogenated by hydrogen,
preferably at standard pressure or elevated pressure of up to 100 bar, in the presence of suitable catalysts, preferably transition metals or transition metal compounds, preferably palladium or the salts thereof, rhodium or the complexes thereof, in a suitable solvent, preferably dimethylformamide, methanol or ethanol, at a temperature of between 20 and 100°C with formation of a -CH₂-CH₂ bridge and then worked up and the product is optionally purified,

K) optionally the double bond in the 7-membered ring of one of the reaction products from step I) is hydrogenated by hydrogen, preferably at standard pressure or elevated pressure of up to 100 bar, in the presence of suitable catalysts, preferably transition metals or transition metal compounds, preferably palladium or the salts thereof, rhodium or the complexes thereof, in a suitable solvent, preferably dimethylformamide, methanol or ethanol, at a temperature of between 20 and 100°C and then worked up and the product is optionally purified.

12. A pharmaceutical preparation containing at least one substituted benzo[b]azepin-2-one compound or a corresponding tautomer, optionally in the form of the
racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in each case in the form of the solvate thereof, in particular the hydrate, according to one of claims 1-10, and optionally physiologically acceptable auxiliary substances.

13. A pharmaceutical preparation according to claim 12 for combatting pain.

14. A pharmaceutical preparation according to claim 13 for combatting chronic pain.

15. A pharmaceutical preparation according to claim 13 for combatting neuropathic pain.

16. A pharmaceutical preparation according to claim 12 for the treatment or prevention of neurodegenerative diseases, preferably of Alzheimer's disease, Parkinson's disease or Huntington's chorea.

17. A pharmaceutical preparation according to claim 12 for the treatment or prevention of stroke.

18. A pharmaceutical preparation according to claim 12 for the treatment or prevention of cerebral ischaemia.
19. A pharmaceutical preparation according to claim 12 for the treatment or prevention of cerebral infarct.

20. A pharmaceutical preparation according to claim 12 for the treatment or prevention of cerebral oedema.

21. A pharmaceutical preparation according to claim 12 for the treatment or prevention of insufficiency states of the central nervous system, preferably hypoxia or anoxia.

22. A pharmaceutical preparation according to claim 12 for the treatment or prevention of epilepsy.

23. A pharmaceutical preparation according to claim 12 for the treatment or prevention of schizophrenia.

24. A pharmaceutical preparation according to claim 12 for the treatment or prevention of psychoses brought about by elevated amino acid levels.

25. A pharmaceutical preparation according to claim 12 for the treatment or prevention of AIDS dementia.

26. A pharmaceutical preparation according to claim 12 for the treatment or prevention of Tourette's syndrome.

27. A pharmaceutical preparation according to claim 12 for the treatment or prevention of encephalomyelitis.

28. A pharmaceutical preparation according to claim 12 for the treatment or prevention of perinatal asphyxia.
29. A pharmaceutical preparation according to claim 12 for the treatment or prevention of tinnitus.

30. A pharmaceutical preparation according to claim 12 for the treatment or prevention of migraine.

31. A pharmaceutical preparation according to claim 12 for the treatment or prevention of inflammatory and/or allergic reactions.

32. A pharmaceutical preparation according to claim 12 for the treatment or prevention of depression.

33. A pharmaceutical preparation according to claim 12 for the treatment or prevention of mental health conditions.

34. A pharmaceutical preparation according to claim 12 for the treatment or prevention of urinary incontinence.

35. A pharmaceutical preparation according to claim 12 for the treatment or prevention of pruritus.

36. A pharmaceutical preparation according to claim 12 for the treatment or prevention of diarrhoea.

37. A pharmaceutical preparation according to claim 12 for anxiolysis.

38. A pharmaceutical preparation according to claim 12 for anaesthesia.
39. Use of at least one substituted benzo[b]azepin-2-one compound or a tautomer thereof, optionally in the form of the racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in each case in the form of the solvate thereof, in particular the hydrate, according to one of claims 1-10 for the production of a pharmaceutical preparation for the combatting of pain, preferably of chronic or neuropathic pain.

40. Use of at least one substituted benzo[b]azepin-2-one compound or a tautomer thereof, optionally in the form of the racemate thereof, the pure stereoisomer thereof, in particular enantiomer or diastereomer, or in the form of mixtures of the stereoisomers, in particular the enantiomers or diastereomers, in any desired mixing ratio or in each case in the form of the acid or base thereof or in the form of the salt thereof, in particular a physiologically acceptable salt, or in each case in the form of the solvate thereof, in particular the hydrate, according to one of claims 1-10 for the production of a pharmaceutical preparation for the treatment or prevention of neurodegenerative diseases, preferably Alzheimer's disease, Parkinson's disease or Huntington's chorea, for the treatment or prevention of stroke, cerebral ischaemia, cerebral infarct, cerebral oedema, insufficiency states of the central nervous system,
preferably hypoxia or anoxia, epilepsy, schizophrenia, psychoses brought about by elevated amino acid levels, AIDS dementia, encephalomyelitis, Tourette's syndrome, perinatal asphyxia, tinnitus, migraine, inflammatory and/or allergic reactions, depression, mental health conditions, urinary incontinence, pruritus or diarrhoea or for anxiolysis or anaesthesia.
