(54) Title: SYSTEM AND METHOD FOR DETERMINING INFORMATION RELATED TO USER INTERACTIONS WITH AN APPLICATION

(57) Abstract: A system, method, and computer program product is disclosed for determining information related to user interactions with an application. The system comprises a collector, an analyzer, and a storage device. The collector inspects data sent from the application to a server in response to a user interacting with the application. The analyzer then determines, based on the data, a description of the interaction of the user with the application and the server. The system stores the description of the interaction of the user in the storage device.
