Abstract: Apparatus and methods to perform operations in a wellbore using downhole tools having movable sections are described. In one described example, a downhole tool for use in a wellbore includes a first extendable anchor (112) to contact a wall of the wellbore to fix the tool (100) at a location in the wellbore. The downhole tool also includes a first tool (118) of the downhole tool to perform a first operation at the location in the wellbore, and a second tool (120) of the downhole tool spaced from the first tool and to perform a second operation. Additionally, the downhole tool includes an extendable member (104) to move the second tool to the location while the anchor is in contact with the wall of the wellbore to perform the second operation after the first operation.

Special categories of cited documents:

*A* document defining the general state of the art which is not considered to be of particular relevance

*E* earlier document but published on or after the international filing date

*L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

*O* document referring to an oral disclosure, use, exhibition or other means

*P* document published prior to the international filing date but later than the priority date claimed

*T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

*X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

*Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

*8* document member of the same patent family
