# UNITED STATES PATENT OFFICE.

JAMES C. PEASE, OF SYCAMORE, OHIO.

## IMPROVEMENT IN FIELD-ROLLERS.

Specification forming part of Letters Patent No. **31,087**, dated January 8, 1861.

*To all whom it may concern:*

Be it known that I, JAMES C. PEASE, of Sycamore, in the county of Wyandot and State of Ohio, have invented a new and useful Improvement in Field-Rollers; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the annexed drawings, forming part of this specification, in the several figures of which similar characters of reference denote the same parts.

Figure 1 is a top view of the roller. Fig. 2 is a side view of the same.

The nature of the invention consists in the construction of field-rollers, as hereinafter set forth.

In the drawings, R and R' are two rollers upon the shaft S, and R'' a roller in advance of the preceding, revolving in frame f, which is swiveled, as seen at a, so as to permit the

said roller to assume any desired position in turning, and thus facilitate the operation.

The draft is applied to tongue T, and the connection between the rear rollers and the attachment of draft is by braces B B and strap C.

The action of this machine is to effectually crush the clods and be easily operated.

Having described the invention and its operation, I claim as new and of my own invention—

The arrangement of rollers R R' R'', swivel-frame f, shaft S, braces B B, strap C, and tongue T, as and for the purpose set forth.

In testimony whereof I have hereunto signed my name before two subscribing witnesses.

JAMES C. PEASE.
