UNITED STATES PATENT OFFICE

ALBERT J. JOHNSON AND CLAUDE B. GRACE, OF OMAHA, NEBRASKA

ADVERTISING RACK FOR TYPEWRITERS

Application filed July 14, 1931, Serial No. 550,740. Renewed April 5, 1932.

The present invention relates to an advertising rack for attachment to a typewriter or a table and has for its prime object to provide a device of this nature which is exceedingly simple in its construction, inexpensive to manufacture, easy to apply, thoroughly efficient and reliable and otherwise well adapted to the purpose for which it is designed.

With the above and other objects in view as will appear as the description proceeds, the invention resides in certain novel features of construction, and in the combination and arrangement of parts as will be hereinafter more fully described and claimed.

In the drawings:

Figure 1 is a front elevation of the rack embodying the features of my invention.

Figure 2 is a side elevation thereof, and

Figure 3 is a sectional view taken substantially on the line 3—3 of Figure 1.

Referring to the drawings in detail it will be seen that the numeral 5 denotes the typewriter stand on which may be mounted a conventional typewriter 6. Our improved rack comprises a pair of elongated strap arms including vertical sections 7 merging into upwardly and rearwardly inclined sections 8 and at their lower ends merging into right angularly and forwardly extending sections 9. L-shaped strap arms 11 have their shorter legs fixed to the upper ends of the sections 7 to project forwardly therefrom and to be engaged with the upper portion of the back of the typewriter 6 by screws, bolts or the like 12. The sections 9 extend under the rear portion of the typewriter. Numeral 14 denotes an advertising panel having thereover a transparent panel 15. A frame 16 extends about the edges of the panels 14 and 15.

The upper portions of the sections 8 are riveted or otherwise secured to the panel 14 on the rear surface thereof. A bracket 17 on the upper portion of the panel extends upwardly therefrom and then curved over in front thereof to support a lamp shade 18 so that electric bulbs therein may throw the light down on the panel 15.

It is thought that the construction, utility and advantages of the invention will now be

quite apparent without a more detailed description.

It will be apparent that the rack may be used to advantage in advertising in large offices and in public places where typewriters are used.

The present embodiment of the invention has been disclosed in considerable detail because in actual practice it attains the features of advantage enumerated as desirable in the statement of the invention and the above description.

It will be apparent that changes in the details of construction may be resorted to without departing from the spirit or scope of the invention as hereinafter claimed or sacrificing any of its advantages.

Having thus described our invention, what we claim as new is:

1. An advertising rack of the class described including a pair of spaced parallel coextensive strap arms having vertical sections which merge at their upper ends into upwardly and rearwardly inclined sections and at their lower ends merge into forwardly and right angularly directed extensions adapted to be placed under the rear of a typewriter or table, a pair of L-shaped strap arms having their shorter legs fixed to the upper ends of the vertical sections to project forwardly therefrom and adapted to be secured to the top of the rear portion of the typewriter or table and a panel secured on the upper portions of the inclined sections, a transparent panel on the first mentioned panel, and a frame about said panel.

2. An advertising rack of the class described including a pair of spaced parallel coextensive strap arms having vertical sections which merge at their upper ends into upwardly and rearwardly inclined sections and at their lower ends merge into forwardly and right angularly directed extensions adapted to be placed under the rear of a typewriter or table, a pair of L-shaped strap arms having their shorter legs fixed to the upper ends of the vertical sections to project forwardly therefrom and adapted to be secured to the top of the rear portion of the typewriter, or table, and a panel secured on the

upper portions of the inclined sections, a transparent panel on the first mentioned panel, and a frame about said panel, a bracket rising from the first mentioned panel and extending over the top thereof, and a light shade supported on said bracket.

In testimony whereof we affix our signatures.

ALBERT J. JOHNSON.
CLAUDE B. GRACE.
