(54) Title: A MOBILE APPARATUS CAPABLE OF SURFACE MEASUREMENTS OF A COATING THICKNESS

(57) Abstract: The present invention relates to a mobile apparatus and/or system that measures the thickness at one or more locations of a surface on at least a part of a substrate and methods of using said apparatus and/or system. The mobile apparatus and/or system in one embodiment includes an apparatus and/or system having a coating thickness monitor and, optionally, an apparatus and/or system for simultaneously regulating the coating thickness applied on a substrate. In another embodiment, the apparatus and system has the ability to measure coating thickness subsequent to the coating's formation.

* Special categories of cited documents :

A document defining the general state of the art which is not considered to be of particular relevance

E earlier document but published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
