ABSTRACT

The toilet seat lift bar is a unique invention. It is a rectangular bar that attaches underneath the toilet seat to help lift or lower the toilet seat without touching the toilet seat itself. It will be very beneficial for all ages, especially for small children who are potty training. In today’s Society any product that helps cut down any contact in a possible unsanitary public restroom will definitely be beneficial for all ages.
Toilet seat lift Bar
TOILET SEAT LIFT BAR

BRIEF SUMMARY OF THE TOILET SEAT LIFT BAR

[0001] The Toilet Seat Lift Bar’s purpose and function is to allow an individual to lift and place the toilet seat down after each use without actually touching the toilet seat. Another reason is to possible prevent bodily fluid contact. Different individuals use toilets every day. The function for a Toilet Seat Lift Bar is to serve as a separate but yet attachment to the toilet seat, thus allowing the individual to prevent contact with the toilet seat and bodily fluids.

DETAILED DESCRIPTION OF THE TOILET SEAT LIFT BAR

[0002] The Toilet Seat Lift Bar is 5 inches in length and 2 inches in width ¾ of an inch in thickness, rectangular in shape. It is attaches underneath either side of the toilet seat with adhesive, screws or hinges depending on the material the toilet seat. When attached to the toilet seat it extends 4 inches away from the toilet seat. The material of the Toilet Seat Lift Bar comes in wood, plastic or metal depending on the toilet seat material. The color also varies from a natural to a white, red, blue, pink, black, beige color or a custom color to match your toilet seat.

BACKGROUND OF THE INVENTION

[0003] The Toilet Seat Lift Bar was invented due to the fact of constant reminders to our loved ones to put the toilet seat down or lift the toilet seat when you urinate, the toilet seat lift bar’s purpose is to prevent individuals or loved ones from actual contact of possible bodily fluids.

1. There is no device which attaches to any toilet seat which helps lift and place the toilet seat down after each use. This invention is very unique because it will assist young children who are potty training, especially boys/men to lift the toilet seat easily instead of urinating on the toilet seat because they did not want to touch the possibly dirty toilet seat that was used prior, (which may have been exposed to bodily fluid.) This is also unique because its beneficial use is unlimited. It can be installed in public bathrooms, hotels, schools and anywhere there is a toilet. Our children can benefit from any help we can give them when it comes to potty training and the use of public bathrooms. We can not always be with our children 24/7 but we can help to place a toilet seat lift bar for easy lifting and placing down after each use. It will also serve as a reminder to left or place the toilet seat down after each use. Thank you for your time and any consideration for approval regarding the Patent for the Toilet Seat Lift Bar.
