Title: 5,7-DIAMINOPYRAZOLE 4,3-D/Pyrimidines with PDE-5 Inhibiting Activity

Abstract: This invention relates to compounds of formula (I).
The present invention relates to a series of novel 5,7-diaminopyrazolo[4,3-d]pyrimidines, which are cyclic guanylate monophosphate (cGMP)-specific phosphodiesterase type 5 inhibitors (hereinafter referred to as PDE-5 inhibitors) that are useful in the treatment of hypertension and other disorders, to processes for their preparation, intermediates used in their preparation, to compositions containing them and the uses of said compounds and compositions.

i) Hypertension

Blood pressure (BP) is defined by a number of haemodynamic parameters taken either in isolation or in combination. Systolic blood pressure (SBP) is the peak arterial pressure attained as the heart contracts. Diastolic blood pressure is the minimum arterial pressure attained as the heart relaxes. The difference between the SBP and the DBP is defined as the pulse pressure (PP).

Hypertension, or elevated BP, has been defined as a SBP of at least 140mmHg and/or a DBP of at least 90mmHg. By this definition, the prevalence of hypertension in developed countries is about 20% of the adult population, rising to about 60-70% of those aged 60 or more, although a significant fraction of these hypertensive subjects have normal BP when this is measured in a non-clinical setting. Some 60% of this older hypertensive population have isolated systolic hypertension (ISH), i.e. they have an elevated SBP and a normal DBP. Hypertension is associated with an increased risk of stroke, myocardial infarction, atrial fibrillation, heart failure, peripheral vascular disease and renal impairment (Fagard, RH; Am. J. Geriatric Cardiology 11(1), 23-28, 2002; Brown, MJ and Haycock, S; Drugs 59(Suppl 2), 1-12, 2000).

The pathophysiology of hypertension is the subject of continuing debate. While it is generally agreed that hypertension is the result of an imbalance between cardiac output and peripheral vascular resistance, and that most hypertensive subjects have
abnormal cardiac output and increased peripheral resistance there is uncertainty which parameter changes first (Beever, G et al.; BMJ 322, 912-916, 2001).

Despite the large number of drugs available in various pharmacological categories, including diuretics, alpha-adrenergic antagonists, beta-adrenergic antagonists, calcium channel blockers, angiotensin converting enzyme (ACE) inhibitors and angiotensin receptor antagonists, the need for an effective treatment of hypertension is still not satisfied.

ii) PDE5 inhibitors

Vascular endothelial cells secrete nitric oxide (NO). This acts on vascular smooth muscle cells and leads to the activation of guanylate cyclase and the accumulation of cyclic guanosine monophosphate (cGMP). The accumulation of cGMP causes the muscles to relax and the blood vessels to dilate. This dilation reduces vascular resistance and so leads to a reduction in blood pressure.

The cGMP is inactivated by hydrolysis to guanosine 5’-monophosphate (GMP) by a cGMP-specific phosphodiesterase. One important phosphodiesterase has been identified as Phosphodiesterase type 5 (PDE5). Inhibitors of PDE5 decrease the rate of hydrolysis of cGMP and so potentiate the actions of nitric oxide.

Inhibitors of PDE5 have been reported in several chemical classes, including: pyrazolo[4,3-d]pyrimidin-7-ones (e.g. published international patent applications WO 93/06104, WO 98/49166, WO 99/54333, WO 00/24745, WO 01/27112 and WO 01/27113); pyrazolo[3,4-d]pyrimidin-4-ones (e.g. published international patent application WO 93/07149); pyrazolo[4,3-d]pyrimidines (e.g. published international patent application WO 01/18004); quinazolin-4-ones (e.g. published international patent application WO 93/12095); pyrido[3,2-d]pyrimidin-4-ones (e.g. published international patent application WO 94/05661); purin-6-ones (e.g. published international patent application WO 94/00453); hexahydropyrazino[2’,1’:6,1]pyrido[3,4-b]indole-1,4-diones (e.g. published international
application WO 95/19978) and imidazo[5,1-f][1,2,4]triazin-ones (e.g. published international application WO 99/24433).

Although they have been suggested as agents for the treatment of related conditions such as angina, PDE5 inhibitors have not yet been adopted as agents for the treatment of hypertension. PDE5 inhibitors are known for the treatment of male erectile dysfunction, e.g. sildenafil, tadalafil and vardenafil. There remains a demand for new PDE5 inhibitors, particularly with improved pharmacokinetic and pharmacodynamic properties. The compounds provided herein are potent inhibitors of PDE5 that have improved selectivity in vitro and/or an extended half-life in vivo.

WO 02/00660 and WO 01/18004 disclose pyrazolo[4,3-d]pyrimidines with a PDE-5 inhibiting effect, which can be used for treating disorders of the cardiovascular system.

According to a first aspect, the present invention provides compounds of formula (I)

![Chemical Structure](image)

wherein

- $R^1$ is a cyclic group selected from $R^A$, $R^B$, $R^C$ and $R^D$, each of which is optionally substituted with one or more $R^E$ groups;

- $R^2$ is hydrogen or $C_1$-$C_2$ alkyl;

- $R^3$ and $R^4$ are each independently $C_1$-$C_6$ alkyl, $C_2$-$C_8$ alkenyl, $C_2$-$C_8$ alkynyl or $C_3$-$C_{10}$ cycloalkyl, each of which is optionally substituted with one or more $R^5$ groups, or $R^6$, which is optionally substituted with one or more $R^7$ groups, or hydrogen;
or \(-\text{NR}^2\text{R}^5\) forms \(\text{R}^9\), which is optionally substituted with one or more \(\text{R}^{10}\) groups;

\(\text{R}^9\) is selected from \(-\text{Y-CO}_2\text{R}^{15}\) and \(-\text{Y-R}^{16}\);

\(\text{R}^8\), which may be attached at \(\text{N}^1\) or \(\text{N}^2\), is \(\text{C}_1\text{-C}_6\) alkyl, \(\text{C}_1\text{-C}_6\) haloalkyl, \(\text{C}_2\text{-C}_6\) alkenyl or \(\text{C}_2\text{-C}_6\) alkynyl, each of which is optionally substituted by \(\text{C}_1\text{-C}_6\) haloalkoxy or a cyclic group selected from \(\text{R}^7\), \(\text{R}^6\), \(\text{R}^5\) and \(\text{R}^{14}\), or \(\text{R}^8\) is \(\text{R}^\text{N}\), \(\text{C}_3\text{-C}_7\) cycloalkyl or \(\text{C}_3\text{-C}_7\) halocycloalkyl, each of which is optionally substituted by \(\text{C}_1\text{-C}_6\) alkoxy or \(\text{C}_1\text{-C}_6\) haloalkoxy, or \(\text{R}^8\) is hydrogen;

\(\text{R}^7\) is halo, \(\text{C}_1\text{-C}_6\) alkyl, \(\text{C}_1\text{-C}_6\) haloalkyl, \(\text{C}_2\text{-C}_6\) alkenyl, \(\text{C}_2\text{-C}_6\) alkynyl, \(\text{C}_2\text{-C}_{10}\) cycloalkyl, \(\text{C}_2\text{-C}_{10}\) halocycloalkyl, phenyl, \(\text{OR}^{12}\), \(\text{OC(O)R}^{12}\), \(\text{NO}_2\), \(\text{NR}^{12}\text{R}^{13}\), \(\text{NR}^{12}\text{C(O)R}^{13}\), \(\text{NR}^{12}\text{CO}_2\text{R}^{14}\), \(\text{C(O)R}^{12}\), \(\text{CO}_2\text{R}^{12}\), \(\text{CONR}^{12}\text{R}^{13}\) or \(\text{CN}\);

\(\text{R}^8\) is halo, phenyl, \(\text{C}_1\text{-C}_6\) alkoxyphenyl, \(\text{OR}^{12}\), \(\text{OC(O)R}^{12}\), \(\text{NO}_2\), \(\text{NR}^{12}\text{R}^{13}\), \(\text{NR}^{12}\text{C(O)R}^{13}\), \(\text{NR}^{12}\text{CO}_2\text{R}^{14}\), \(\text{C(O)R}^{12}\), \(\text{CO}_2\text{R}^{12}\), \(\text{CONR}^{12}\text{R}^{13}\), \(\text{CN}\), \(\text{C}_2\text{-C}_6\) cycloalkyl, \(\text{R}^6\) or \(\text{R}^4\), the last two of which are optionally substituted with one or more \(\text{R}^8\) groups;

\(\text{R}^9\) is \(\text{C}_1\text{-C}_6\) alkyl, \(\text{C}_1\text{-C}_6\) haloalkyl or \(\text{CO}_2\text{R}^{12}\);

\(\text{R}^{10}\) is halo, \(\text{C}_2\text{-C}_{10}\) cycloalkyl, \(\text{C}_2\text{-C}_{10}\) halocycloalkyl, phenyl, \(\text{OR}^{12}\), \(\text{OC(O)R}^{12}\), \(\text{NO}_2\), \(\text{NR}^{12}\text{R}^{13}\), \(\text{NR}^{12}\text{C(O)R}^{13}\), \(\text{NR}^{12}\text{CO}_2\text{R}^{14}\), \(\text{C(O)R}^{12}\), \(\text{CO}_2\text{R}^{12}\), \(\text{CONR}^{12}\text{R}^{13}\), \(\text{CN}\), oxo, \(\text{C}_1\text{-C}_6\) alkyl or \(\text{C}_1\text{-C}_6\) haloalkyl, the last two of which are optionally substituted by \(\text{R}^{11}\);

\(\text{R}^{11}\) is phenyl, \(\text{NR}^{12}\text{R}^{13}\) or \(\text{NR}^{12}\text{CO}_2\text{R}^{14}\);

\(\text{R}^{12}\) and \(\text{R}^{13}\) are each independently hydrogen, \(\text{C}_1\text{-C}_6\) alkyl or \(\text{C}_1\text{-C}_6\) haloalkyl;

\(\text{R}^{14}\) is \(\text{C}_1\text{-C}_6\) alkyl or \(\text{C}_1\text{-C}_6\) haloalkyl;
R^{16} is hydrogen or C_{1}-C_{6} alkyl optionally substituted with one or more groups selected from phenyl, halo, OH, C_{1}-C_{6} alkyl andyloxy, NH_{2}, NH(C_{1}-C_{6} alkyl) and N(C_{1}-C_{6} alkyl)$_{2}$;

R^{16} is a carboxylic acid isostere selected from tetrazol-5-yl, 5-trifluoromethyl-1,2,4-triazol-3-yl, 5-(methylsulfonyl)-1,2,4-triazol-3-yl, 2,5-dihydro-5-oxo-1,2,4-oxadiazol-3-yl, -SO$_{2}$NHR$^{17}$ and -CONHR$^{18}$;

R$^{17}$ is selected from C$_{1}$-C$_{6}$ alkyl, phenyl, -CO-(C$_{1}$-C$_{6}$ alkyl) and -CO-phenyl;

R$^{18}$ is selected from -SO$_{2}$-(C$_{1}$-C$_{6}$ alkyl) and -SO$_{2}$-phenyl;

R$^{A}$ and R$^{I}$ are each independently a C$_{3}$-C$_{10}$ cycloalkyl or C$_{3}$-C$_{10}$ cycloalkenyl group, each of which may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic and which may be fused to either

- a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or
- a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R$^{B}$ and R$^{I}$ are each independently a phenyl or naphthyl group, each of which may be fused to

- a C$_{5}$-C$_{7}$ cycloalkyl or C$_{5}$-C$_{7}$ cycloalkenyl ring,
- a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or
- a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R$^{C}$, R$^{I}$ and R$^{II}$ are each independently a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated or partly unsaturated ring system containing between 3 and 10 ring atoms, of which at least one is a
heteroatom selected from nitrogen, oxygen and sulphur, which ring may be fused to a C₆-C, cycloalkyl or C₅-C, cycloalkeny1 group or a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R⁰ and R⁰' are each independently a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur, which ring may further be fused to

(a) a second 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;
(b) C₅-C₆ cycloalkyl or C₅-C₆ cycloalkeny1 ring;
(c) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur; or
(d) a benzene ring;

R⁵, R⁶ and R⁰ are each independently a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R⁵' is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur; and

Y is a covalent bond, –CH₂-O-CH₂–, C₁-C₆ alkylenyl or C₅-C₆ cycloalkylenyl;

a tautomer thereof or a pharmaceutically acceptable salt or solvate of said compound or tautomer.

As used herein, alkylenyl indicates an alkyl-ₘ,ₙ-diyl unit where ῳ and ῴ are the same or different, such as methylene (–CH₂–), ethylene (–CH₂CH₂–) and propane-1,2-diyl (–CH(CH₃)CH₂–).
As used herein, cycloalkylenyl indicates a cycloalkyl-\(m,n\)-diyl unit where \(m\) and \(n\) are the same or different, such as cyclopropane-1,1-diyl and cyclohexane-1,4-diyl.

5 Unless otherwise indicated, an alkyl or alkoxy group may be straight or branched and contain 1 to 8 carbon atoms, preferably 1 to 6 and particularly 1 to 4 carbon atoms. Examples of alkyl include methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, pentyl and hexyl. Examples of alkoxy include methoxy, ethoxy, isoproxy and n-butoxy.

10 Unless otherwise indicated, an alkenyl or alkynyl group may be straight or branched and contain 2 to 8 carbon atoms, preferably 2 to 6 and particularly 2 to 4 carbon atoms and may contain up to 3 double or triple bonds which may be conjugated. Examples of alkenyl and alkynyl include vinyl, allyl, butadienyl and propargyl.

15 Unless otherwise indicated, a cycloalkyl or cycloalkoxy group may contain 3 to 10 ring-atoms, may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic. Examples of cycloalkyl groups are cyclopropyl, cyclopentyl, cyclohexyl and adamantyl.

20 Unless otherwise indicated, a cycloalkenyl group may contain 3 to 10 ring-atoms, may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic and may contain up to 3 double bonds. Examples of cycloalkenyl groups are cyclopentenyl and cyclohexenyl.

25 Aryl includes phenyl, naphthyl, anthracenyl and phenanthrenyl.

30 Unless otherwise indicated, a heteroalicycyl group contains 3 to 10 ring-atoms up to 4 of which may be hetero-atoms such as nitrogen, oxygen and sulfur, and may be saturated or partially unsaturated. Examples of heteroalicycyl groups are oxiranyl, azetidinyl, tetrahydrofuranyl, thiolanyl, pyrrolidinyl, pyrrolinyl, imidazolidinyl,
imidazolanyl, sulfolanyl, dioxolanyl, dihydroxypranyl, tetrahydroxypranyl, piperidinyl, pyrazolyl, pyrazolidinyl, dioxanyl, morpholinyl, dithianyl, thiomorpholinyl, piperazinyl, azepinyl, oxazepinyl, thiazepinyl, thiazolinyl and diazepanyl.

5 Unless otherwise indicated, a heteroaryl group contains 3 to 10 ring-atoms up to 4 of which may be hetero-atoms such as nitrogen, oxygen and sulfur. Examples of heteroaryl groups are furyl, thiényl, pyrrolyl, oxazolyl, thiazolyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, oxadiazolyl, triazolyl, thiadiazolyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, tetrazolyl, triazinyl. In addition, the term heteroaryl includes fused heteroaryl groups, for example benzimidazolyl, benzoxazolyl, imidazopyridinyl, benzoxazinyl, benzothiazinyl, oxazolopyridinyl, benzofuranyl, quinolinyl, quinazolinyl, quinoxalinyl, benzothiazolyl, phthalimido, benzofuranyl, benzodiazepinyl, indolyl and isoindolyl.

10 Halo means fluoro, chloro, bromo or iodo.

Haloalkyl includes monohaloalkyl, polyhaloalkyl and perhaloalkyl, such as 2-bromoethyl, 2,2,2-trifluoroethyl, chlorodifluoromethyl and trichloromethyl.
Haloalkoxy includes monohaloalkoxy, polyhaloalkoxy and perhaloalkoxy, such as 2-bromoethoxy, 2,2,2-trifluoroethoxy, chlorodifluoromethoxy and trichloromethoxy.
Halocycloalkyl includes monohalocycloalkyl, polyhalocycloalkyl and perhalocycloalkyl.

Unless otherwise indicated, the term substituted means substituted by one or more defined groups. In the case where groups may be selected from a number of alternative groups, the selected groups may be the same or different.

25 In one preferred embodiment, $R^1$ is $R^\alpha$, which is optionally substituted with one or more $R^\gamma$ groups; and
R\textsuperscript{a} is a C\textsubscript{3}-C\textsubscript{10} cycloalkyl group, which may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic, which may be fused to either

(a) a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or

(b) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur.

Preferably, R\textsuperscript{a} is a monocyclic C\textsubscript{5}-C\textsubscript{6} cycloalkyl group.

More preferably, R\textsuperscript{a} is a monocyclic C\textsubscript{5}-C\textsubscript{7} cycloalkyl group.

Most preferably, R\textsuperscript{a} is cyclopentyl or cyclohexyl.

In another preferred embodiment, R\textsuperscript{1} is R\textsuperscript{a}, which is optionally substituted with one or more R\textsuperscript{2} groups.

Preferably, R\textsuperscript{b} is phenyl.

In another preferred embodiment, R\textsuperscript{1} is R\textsuperscript{c}, which is optionally substituted with one or more R\textsuperscript{2} groups.

Preferably, R\textsuperscript{c} is a monocyclic saturated or partly unsaturated ring system containing between 3 and 8 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

More preferably, R\textsuperscript{c} is a monocyclic saturated or partly unsaturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.
Most preferably, $R^2$ is a monocyclic saturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

In another preferred embodiment, $R^1$ is $R^0$, which is optionally substituted with one or more $R^2$ groups.

Preferably, $R^0$ is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur.

More preferably, $R^2$ is a 5-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur and optionally up to two further nitrogen atoms in the ring, or a 6-membered heteroaromatic ring including 1, 2 or 3 nitrogen atoms.

More preferably $R^0$ is furanyl, thienyl, pyrrolyl, pyrazolyl, imidazolyl, isoxazolyl, oxazolyl, isothiazolyl, thiazolyl, oxadiazolyl, pyridyl, pyridazinyl, pyrimidyl or pyrazinyl.

Most preferably, $R^0$ is pyrazolyl, imidazolyl, isoxazolyl, oxazolyl, oxadiazolyl, pyridyl, pyridazinyl, pyrimidyl or pyrazinyl.

Preferably, $R^7$ is halo, C$_1$-C$_6$ alkyl, C$_1$-C$_6$ haloalkyl, OR$^{12}$ or CONR$^{12}$R$^{13}$.

More preferably, $R^7$ is halo, C$_1$-C$_3$ alkyl, C$_1$-C$_3$ alkoxy, hydroxy or CONH(C$_1$-C$_2$ alkyl).

Most preferably, $R^7$ is fluoro, methyl, ethyl, hydroxy, methoxy, propoxy or CONHMe.

Preferably, $R^2$ is hydrogen or methyl.

More preferably, $R^2$ is hydrogen.
Preferably, $R^3$ is hydrogen, C$_1$-C$_4$ alkyl, which is optionally substituted with one or more $R^5$ groups, or $R^e$, which is optionally substituted with one or more $R^g$ groups; and wherein $R^e$ is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

More preferably, $R^3$ is hydrogen, C$_1$-C$_4$ alkyl, which is optionally substituted with one or more $R^5$ groups, or $R^e$, which is optionally substituted with one or more $R^g$ groups; and wherein $R^e$ is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

In one preferred embodiment, $R^3$ is $R^e$, which is optionally substituted with one or more $R^5$ groups and wherein $R^e$ is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom.

More preferably, $R^e$ is azetidinyl, pyrrolidiny1 or piperidinyl.

In another preferred embodiment, $R^3$ is C$_1$-C$_4$ alkyl, which is optionally substituted with one or more $R^5$ groups and wherein $R^e$ is halo, phenyl, C$_1$-C$_6$ alkoxyphenyl, OR$_{12}^1$, NR$_{12}^1$R$_{13}^1$, NR$_{12}^1$CO$_{14}^1$, CO$_{12}^2$R$_{12}^1$, CONR$_{12}^1$R$_{13}^1$, R$_{12}^2$ or R$_{14}^1$, the last two of which are optionally substituted with one or more $R^g$ groups.

More preferably, $R^e$ is hydroxy, methoxy, methoxyphenyl, NH$_2$, NHMe, NMe$_2$, NHCO$_2$Bu, NMeCO$_2$Bu, CO$_2$H, CONHMe, R$_{12}^g$ or R$_{14}^1$, the last two of which are optionally substituted with one or more $R^g$ groups.

In one preferred embodiment, $R^3$ is $R^g$, which is optionally substituted with one or more $R^5$ groups and wherein $R^g$ is a monocyclic saturated ring system containing
between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

More preferably, R⁸ is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom and optionally one oxygen atom.

Most preferably, R⁸ is pyrrolidinyl, piperidinyl or morpholinyl.

In another preferred embodiment, R⁸ is R⁹, which is optionally substituted with one or more R⁸ groups and wherein R⁹ is a 5- or 6-membered heteroaromatic ring containing up to two nitrogen atoms.

More preferably, R⁹ is pyrazolyl.

Preferably, R⁹ is methyl or CO₂Bu.

In another preferred embodiment, R³ is hydrogen or C₁-C₆ alkyl, which is optionally substituted with one or more R⁸ groups, or R³ is azetidinyl, pyrrolidinyl or piperidinyl, each of which is optionally substituted with one or more R⁸ groups, wherein R⁸ is hydroxy, methoxy, methoxyphenyl, NH₂, NHMe, NMe₂, NHCO₂Bu, NMeCO₂Bu, CO₂H, CONHMe, pyrrolidinyl, piperidinyl, morpholinyl or pyrazolyl, the last four of which are optionally substituted with one or more R⁸ groups and wherein R⁰ is methyl or CO₂Bu.

In one preferred embodiment, R³ is hydrogen, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₂-C₆ alkenyl or C₂-C₆ alkynyl.

More preferably, R³ is hydrogen, C₁-C₆ alkyl or C₁-C₆ haloalkyl.

Most preferably, R³ is hydrogen, methyl or ethyl.
In another preferred embodiment, \(-NR^3R^4\) forms \(R^6\), which is optionally substituted with one or more \(R^{10}\) groups and wherein \(R^6\) is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing at least one nitrogen atom and optionally one other atom selected from oxygen and sulphur.

More preferably, \(R^6\) is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing one or two nitrogen atoms and optionally one other atom selected from oxygen and sulphur.

Most preferably, \(R^6\) is selected from azetidinyl, pyrrolidinyl, piperidinyl, piperazinyl, morpholinyl, 3-azabicyclo[3.1.0]hex-3-yl, homopiperazinyl, 2,5-diazabicyclo[4.3.0]non-2-yl, 3,8-diazabicyclo[3.2.1]oct-3-yl, 3,8-diazabicyclo[3.2.1]oct-8-yl, 2,5-diazabicyclo[2.2.1]hept-2-yl, 1,4-diazabicyclo[4.3.0]non-4-yl and 1,4-diazabicyclo[3.2.2]non-4-yl.

Preferably \(R^{10}\) is halo, OR\(^{12}\), NR\(^{12}\)R\(^{13}\), NR\(^{15}\)CO\(_2\)R\(^{14}\), CO\(_2\)R\(^{13}\), oxo, C\(_1\)-C\(_6\) alkyl or C\(_1\)-C\(_6\) haloalkyl, the last two of which are optionally substituted by R\(^{11}\).

More preferably, \(R^{10}\) is halo, methyl, ethyl, isopropyl, hydroxy, methoxy, NH\(_2\), NHMe, NMe\(_2\), NHCO\(_2\)Bu, CO\(_2\)H, CO\(_2\)IBu, oxo, benzyl, -CH\(_2\)NH\(_2\), -CH\(_2\)NHMe, CH\(_2\)NMe\(_2\) or -CH\(_2\)NMeCO\(_2\)Bu.

In one preferred embodiment, \(R^6\) is \(-Y-CO_2R^{16}\). Preferably \(R^{15}\) is hydrogen or C\(_1\)-C\(_5\) alkyl. More preferably \(R^{15}\) is hydrogen. Preferably Y is a covalent bond or C\(_1\)-C\(_6\) alkylenyl. More preferably, Y is a covalent bond or methylene. Most preferably Y is a covalent bond.

In another preferred embodiment, \(R^6\) is \(-Y-R^{16}\). Preferably \(R^{16}\) is a carboxylic acid isostere selected from -CONHR\(^{10}\), tetrazol-5-yl and 2,5-dihydro-5-oxo-1,2,4-
oxadiazol-3-yl. Preferably Y is a covalent bond or C₇-C₆ alkyl-alkyl. More preferably, Y is a covalent bond or methylene.

Preferably, \( R^8 \) is positioned on \( N^1 \) to give the compound of formula (I^a):

![Chemical Structure Image]

In an alternative embodiment of the present invention, \( R^8 \) may be positioned on \( N^2 \) to give the compound of formula (I^b):

![Chemical Structure Image]

Preferably, \( R^8 \) is C₇-C₆ alkyl or C₇-C₆ haloalkyl, each of which is optionally substituted by C₇-C₆ alkoxy, C₇-C₆ haloalkoxy or a cyclic group selected from \( R^3 \), \( R^5 \) and \( R^6 \), or \( R^8 \) is \( R^6 \) or hydrogen;

\( R^5 \) is a C₇-C₆ monocyclic cycloalkyl group;

\( R^3 \) and \( R^6 \) are each independently a monocyclic, saturated or partly unsaturated ring system containing between 4 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur; and

\( R^6 \) is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur.
More preferably, $R^5$ is C$_1$-C$_4$ alkyl or C$_1$-C$_4$ haloalkyl, each of which is optionally substituted by C$_1$-C$_4$ alkoxy, C$_1$-C$_4$ haloalkoxy or a cyclic group selected from $R^i$, $R^j$ and $R^m$, or $R^s$ is $R^n$ or hydrogen;

$R^i$ is cyclopropyl or cyclobutyl;

$R^i$ and $R^m$ are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur; and

$R^m$ is a 5- or 6-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur.

More preferably, $R^5$ is C$_1$-C$_4$ alkyl or C$_1$-C$_4$ haloalkyl, each of which is optionally substituted by C$_1$-C$_4$ alkoxy or a cyclic group selected from $R^i$, $R^j$ and $R^m$, or $R^s$ is $R^n$ or hydrogen;

$R^j$ is cyclopropyl or cyclobutyl;

$R^i$ and $R^m$ are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms containing one heteroatom selected from nitrogen, oxygen and sulphur; and

$R^m$ is a 5- or 6-membered heteroaromatic ring containing one nitrogen atom.

More preferably, $R^5$ is C$_1$-C$_4$ alkyl or C$_1$-C$_4$ haloalkyl, each of which is optionally substituted by C$_1$-C$_4$ alkoxy, cyclopropyl, cyclobutyl, tetrahydrofuranyl, tetrahydropyranyl or pyridinyl, or $R^s$ is hydrogen or tetrahydropyranyl.

Most preferably, $R^5$ is hydrogen, methyl, ethyl, isopropyl, isobutyl, methoxyethyl, methoxycarbonyl, ethoxyethyl, ethoxypropyl, propoxyethyl, 2,2,2-trifluoroethyl, tetrahydrofuranymethyl, tetrahydropyranylmethyl, tetrahydropyranyl or pyridinylmethyl.

Preferred embodiments of compounds of formula (I) are those that incorporate two or more of the foregoing preferences.
Preferably R¹ is a cyclic group selected from R⁴, R⁸, R⁶ and R⁰, each of which is optionally substituted with one or more R⁷ groups;

5  R² is hydrogen or C₁-C₂ alkyl;

R³ is hydrogen, C₃-C₄ alkyl, which is optionally substituted with one or more R⁸ groups, or R⁶, which is optionally substituted with one or more R⁶ groups;

10 R¹ is hydrogen, C₁-C₆ alkyl or C₁-C₆ haloalkyl;

or -NR²R¹ forms R⁷, which is optionally substituted with one or more R¹⁰ groups;

R⁵ is -Y-CO₂R¹⁶ or -Y-R¹⁶;

15 R⁹ is C₃-C₄ alkyl or C₃-C₄ haloalkyl, each of which is optionally substituted by C₁-C₄ alkoxy, C₁-C₄ haloalkoxy or a cyclic group selected from R¹, R¹ and R⁴, or R⁶ is R⁸ or hydrogen;

20 R⁷ is halo, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₂-C₆ alkenyl, C₂-C₆ alkynyl, C₅-C₁₀ cycloalkyl, C₅-C₁₀ halocycloalkyl, phenyl, OR¹², OC(O)R¹², NO₂, NR¹²R¹³, NR¹²C(O)R¹³, NR¹²CO₂R¹⁴, C(O)R¹², CO₂R¹², CONR¹²R¹³ or CN;

R⁸ is halo, phenyl, C₁-C₆ alkoxyphenyl, OR¹², OC(O)R¹², NO₂, NR¹²R¹³, NR¹²C(O)R¹³, NR¹²CO₂R¹⁴, C(O)R¹², CO₂R¹², CONR¹²R¹³, CN, R⁹ or R¹⁰, the last two of which are optionally substituted with one or more R⁹ groups;

R⁹ is C₁-C₆ alkyl, C₁-C₆ haloalkyl or CO₂R¹³,
R\textsuperscript{10} is halo, C\textsubscript{3}-C\textsubscript{10} cycloalkyl, C\textsubscript{3}-C\textsubscript{10} halocycloalkyl, phenyl, OR\textsuperscript{12}, OC(O)R\textsuperscript{12}, NO\textsubscript{2}, NR\textsuperscript{12}R\textsuperscript{13}, NR\textsuperscript{12}C(O)R\textsuperscript{13}, NR\textsuperscript{12}CO\textsubscript{2}R\textsuperscript{14}, C(O)R\textsuperscript{12}, CO\textsubscript{2}R\textsuperscript{13}, CONR\textsuperscript{12}R\textsuperscript{13}, CN, oxo, C\textsubscript{1}-C\textsubscript{6} alkyl or C\textsubscript{1}-C\textsubscript{6} haloalkyl, the last two of which are optionally substituted by R\textsuperscript{11};

R\textsuperscript{11} is phenyl, NR\textsuperscript{12}R\textsuperscript{13} or NR\textsuperscript{12}CO\textsubscript{2}R\textsuperscript{14};

R\textsuperscript{12} and R\textsuperscript{13} are each independently hydrogen, C\textsubscript{1}-C\textsubscript{6} alkyl or C\textsubscript{1}-C\textsubscript{6} haloalkyl;

R\textsuperscript{14} is C\textsubscript{1}-C\textsubscript{6} alkyl or C\textsubscript{1}-C\textsubscript{6} haloalkyl;

R\textsuperscript{15} is hydrogen or C\textsubscript{1}-C\textsubscript{6} alkyl:

R\textsuperscript{16} is tetrazol-5-yl, 5-trifluoromethyl-1,2,4-triazol-3-yl or 2,5-dihydro-5-oxo-1,2,4-oxadiazol-3-yl;

R\textsuperscript{17} is a monocyclic C\textsubscript{3}-C\textsubscript{6} cycloalkyl group;

R\textsuperscript{18} is phenyl;

R\textsuperscript{19} is a monocyclic saturated or partly unsaturated ring system containing between 3 and 8 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R\textsuperscript{20} is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur;

R\textsuperscript{21} is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R\textsuperscript{22} and R\textsuperscript{23} are each independently a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10
ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

$R^N$ is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur;

$R^i$ is cyclopropyl or cyclobutyl;

$R^i$ and $R^N$ are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

$R^a$ is a 5- or 6-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur; and

$Y$ is a covalent bond or C$_1$-C$_6$ alkenyl.

More preferably, $R^i$ is a cyclic group selected from $R^a$, $R^b$, $R^c$ and $R^d$, each of which is optionally substituted with one or more $R^i$ groups;

$R^2$ is hydrogen or C$_1$-C$_2$ alkyl;

$R^3$ is hydrogen, C$_1$-C$_8$ alkyl, which is optionally substituted with one or more $R^8$ groups, or $R^6$, which is optionally substituted with one or more $R^9$ groups;

$R^4$ is hydrogen, C$_1$-C$_6$ alkyl or C$_1$-C$_6$ haloalkyl;

or $-NR^3R^4$ forms $R^5$, which is optionally substituted with one or more $R^{10}$ groups;

$R^8$ is $-Y$-CO$_2$R$^{16}$,
R^6 is C_{1-4} alkyl or C_{1-4} haloalkyl, each of which is optionally substituted by C_{1-4} alkoxy, C_{1-4} haloalkoxy or a cyclic group selected from R^1, R^4 and R^7, or R^6 is R^N or hydrogen;

R^7 is halo, C_{1-6} alkyl, C_{1-6} haloalkyl, OR^{12} or CONR^{12}R^{13};

R^8 is halo, phenyl, C_{1-6} alkoxyphenyl, OR^{12}, NR^{12}R^{13}, NR^{12}CO_{2}R^{14}, CO_{2}R^{12}, CONR^{12}R^{13}, R^G or R^H, the last two of which are optionally substituted with one or more R^6 groups;

R^9 is C_{1-6} alkyl, C_{1-6} haloalkyl or CO_{2}R^{12};

R^{10} is halo, C_{3-10} cycloalkyl, C_{3-10} halocycloalkyl, phenyl, OR^{12}, OC(O)R^{12}, NO_{2}, NR^{12}R^{13}, NR^{12}C(O)R^{13}, NR^{12}CO_{2}R^{14}, C(O)R^{12}, CO_{2}R^{13}, CONR^{12}R^{13}, CN, oxo, C_{1-6} alkyl or C_{1-6} haloalkyl, the last two of which are optionally substituted by R^{11};

R^{11} is phenyl, NR^{12}R^{13} or NR^{12}CO_{2}R^{14};

R^{12} and R^{13} are each independently hydrogen, C_{1-6} alkyl or C_{1-6} haloalkyl;

R^{14} is C_{1-6} alkyl or C_{1-6} haloalkyl;

R^{15} is hydrogen;

R^A is a monocyclic C_5-C_7 cycloalkyl group;

R^B is phenyl;

R^C is a monocyclic saturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;
R^0 is a 5-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur and optionally up to two further nitrogen atoms in the ring, or a 6-membered heteroaromatic ring including 1, 2 or 3 nitrogen atoms;

R^E is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom;

R^E is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing at least one nitrogen atom and optionally one other atom selected from oxygen and sulphur;

R^0 is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R^I is a 5- or 6-membered heteroaromatic ring containing up to two nitrogen atoms;

R^I and R^N are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R^W is a 5- or 6-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur; and

Y is a covalent bond or methylene.

In an alternative embodiment of the present invention, the present invention provides compounds of formula (I-AA)
wherein
R$^1$ is a pyridyl optionally substituted with one or more C$_1$-C$_6$ alkyl groups;

R$^3$ and R$^4$ are each independently hydrogen or C$_1$-C$_6$ alkyl;

R$^5$ is $-$CONHR$^{18}$;

R$^6$ is C$_1$-C$_6$ alkyl, optionally substituted by a substituent selected from $-$OH, C$_1$-C$_6$ cycloalkyloxy, C$_1$-C$_6$ alkóxy and C$_1$-C$_6$ haloalkoxy;

R$^{18}$ is selected from the group consisting of $-$SO$_2$(C$_1$-C$_6$ alkyl) and $-$SO$_2$-phenyl; and tautomers thereof or a pharmaceutically acceptable salts, or solvates of said compounds or tautomers.

In another embodiment of the compounds of formula I-AA, R$^1$ is 2-pyridinyl substituted with one or more methyl. In another embodiment of the compounds of formula I-AA, R$^3$ and R$^4$ are independently selected from the group consisting of methyl, ethyl, propyl, and isopropyl. In another embodiment of the compounds of formula I-AA, R$^{18}$ is selected from the group consisting of $-$SO$_2$CH$_3$, and $-$SO$_2$CH$_2$CH$_3$. In another embodiment of the compounds of formula I-AA, R$^5$ is ethyl, optionally substituted by a substitute selected from the group consisting of hydroxyl, methoxy, ethoxy, propoxy, fluoromethoxy, fluoroethoxy, fluoropropoxy, difluoromethoxy, difluoroethoxy, difluoropropoxy, trifluoromethoxy, trifluoroethoxy, trifluoropropoxy, and cyclobutyloxy.

In another embodiment of the compounds of formula I-AA, R$^1$ pyridinyl is substituted with one or more methyl;
$R^3$ and $R^4$ are independently selected from the group consisting of hydrogen, methyl, ethyl, propyl and isopropyl;

5 $R^6$ is ethyl, optionally substituted by a subsituent selected from the group consisting of $-\text{OH}$, $C_3$-$C_6$ cycloalkyloxy, $C_1$-$C_6$ alkoxy and $C_1$-$C_6$ haloalkoxy; and

$R^{18}$ is selected from the group consisting of $-\text{SO}_2\text{CH}_3$, and $-\text{SO}_2\text{CH}_2\text{CH}_3$.

10 In another alternative embodiment of the present invention, the present invention provides compounds of formula (I-BB)

\[
\begin{array}{c}
\text{R}^{5a} \\
\text{HN} \\
\text{N} \\
\text{O} \\
\text{R}^{16} \\
\text{NH} \\
\end{array}
\]

(I-BB)

wherein

$R^3$ and $R^4$ are each independently selected from the group consisting of methyl, ethyl, and isopropyl;

15 $R^{5a}$ is selected from the group consisting of methyl, ethyl, propyl, fluoromethyl, fluoroethyl, fluoropropyl, difluoroethyl, difluoropropyl, trifluoroethyl, and trifluoropropyl; and

$R^{18}$ is selected from the group consisting of $-\text{SO}_2\text{CH}_3$, and $-\text{SO}_2\text{CH}_2\text{CH}_3$.

Most preferred compounds are:
methyl 5-((1S,4S)-2,5-diazabicyclo[2.2.1]hept-2-yl)-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate,

methyl 1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(6-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate,

ethyl 1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate,

2-(dimethylamino)ethyl 5-dimethylamino-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate,

1-(2-ethoxyethyl)-5-(N-methyl-N-propylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1-(2-propoxy-ethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

7-(4,6-dimethylpyridin-2-ylamino)-1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

5-(N-cyclobutyl-N-methylamino)-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-isopropylamino-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,
3-[1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]-2H-1,2,4-oxadiazol-5-one,

3-[1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]-2H-1,2,4-oxadiazol-5-one,

1-(2-ethoxyethyl)-7-(4-fluoro-3-methylphenylamino)-5-(N-isopropyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-fluoro-3-methylphenylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

7-(3,4-dimethylphenylamino)-1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-(cyclopropylmethoxy)ethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-(cyclopropylmethoxy)ethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-isopropoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

N-[1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide, and
N-[1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

and tautomers thereof and pharmaceutically acceptable salts or solvates of said compounds or tautomers.

Pharmaceutically acceptable salts of the compounds of formula (I) include the acid addition and base salts thereof.

Suitable acid addition salts are formed from acids which form non-toxic salts. Examples include the acetate, aspartate, benzoate, besylate, bicarbonate/carbonic acid, bisulphate/sulphate, borate, camsylate, citrate, edisylate, esylate, formate, fumarate, gluceptate, gluconate, glucuronate, hexafluorophosphate, hibenzate, hydrochloride/chloride, hydrobromide/bromide, hydroiodide/iodide, isethionate, lactate, malate, maleate, malonate, mesylate, methylsulphate, naphthylate, 2-napsylate, nicotinate, nitrate, orotate, oxalate, palmitate, pamoate, phosphate/hydrogen phosphate/dihydrogen phosphate, saccharate, stearate, succinate, tartrate, tosylate and trifluoroacetate salts.

Suitable base salts are formed from bases which form non-toxic salts. Examples include the aluminium, arginine, benzathine, calcium, choline, diethylamine, diolamine, glycine, lysine, magnesium, meglumine, olamine, potassium, sodium, tromethamine and zinc salts.

For a review on suitable salts, see “Handbook of Pharmaceutical Salts: Properties, Selection, and Use” by Stahl and Wermuth (Wiley-VCH, Weinheim, Germany, 2002).

A pharmaceutically acceptable salt of a compound of formula (I) may be readily prepared by mixing together solutions of the compound of formula (I) and the desired acid or base, as appropriate. The salt may precipitate from solution and be
collected by filtration or may be recovered by evaporation of the solvent. The degree
of ionisation in the salt may vary from completely ionised to almost non-ionised.

The compounds of the invention may exist in both unsolvated and solvated forms.

The term 'solvate' is used herein to describe a molecular complex comprising the
compound of the invention and one or more pharmaceutically acceptable solvent
molecules, for example, ethanol. The term 'hydrate' is employed when said solvent
is water.

Included within the scope of the invention are complexes such as clathrates, drug-
host inclusion complexes wherein, in contrast to the aforementioned solvates, the
drug and host are present in stoichiometric or non-stoichiometric amounts. Also
included are complexes of the drug containing two or more organic and/or inorganic
components which may be in stoichiometric or non-stoichiometric amounts. The
resulting complexes may be ionised, partially ionised, or non-ionised. For a review of
such complexes, see J Pharm Sci, 64 (8), 1269-1288 by Halebian (August 1975).

Hereinafter all references to compounds of formula (I) include references to salts,
solvates and complexes thereof and to solvates and complexes of salts thereof.

The compounds of the invention include compounds of formula (I) as hereinbefore
defined, polymorphs, prodrugs, and isomers thereof (including optical, geometric
and tautomeric isomers) as hereinafter defined and isotopically-labeled compounds
of formula (I).

Also within the scope of the invention are so-called 'prodrugs' of the compounds of
formula (I). Thus certain derivatives of compounds of formula (I) which may have
little or no pharmacological activity themselves can, when administered into or onto
the body, be converted into compounds of formula (I) having the desired activity, for
example, by hydrolytic cleavage. Such derivatives are referred to as 'prodrugs'.
Further information on the use of prodrugs may be found in 'Pro-drugs as Novel

Prodrugs in accordance with the invention can, for example, be produced by replacing appropriate functionalities present in the compounds of formula (I) with certain moieties known to those skilled in the art as 'pro-moieties' as described, for example, in "Design of Prodrugs" by H Bundgaard (Elsevier, 1985).

Some examples of prodrugs in accordance with the invention include:

(i) where the compound of formula (I) contains a carboxylic acid functionality (-COOH), an ester thereof, for example, replacement of the hydrogen with (C_{1-6})alkyl;

(ii) where the compound of formula (I) contains an alcohol functionality (-OH), an ether thereof, for example, replacement of the hydrogen with (C_{1-6})alkanoyloxymethyl; and

(iii) where the compound of formula (I) contains a primary or secondary amino functionality (-NH_{2} or -NHR where R ≠ H), an amide thereof, for example, replacement of one or both hydrogens with (C_{1-10})alkanoyl.

Further examples of replacement groups in accordance with the foregoing examples and examples of other prodrug types may be found in the aforementioned references.

Finally, certain compounds of formula (I) may themselves act as prodrugs of other compounds of formula (I).
Compounds of formula (I) containing one or more asymmetric carbon atoms can exist as two or more stereoisomers. Where a compound of formula (I) contains an alkenyl or alkenylene group, geometric cis/trans (or Z/E) isomers are possible. Where the compound contains, for example, a keto or oxime group or an aromatic moiety, tautomeric isomerism ('tautomerism') can occur. It follows that a single compound may exhibit more than one type of isomerism.

Included within the scope of the present invention are all stereoisomers, geometric isomers and tautomeric forms of the compounds of formula (I), including compounds exhibiting more than one type of isomerism, and mixtures of one or more thereof. Also included are acid addition or base salts wherein the counterion is optically active, for example, D-lactate or L-lysine, or racemic, for example, DL-tartrate or DL-arginine.

Cis/trans isomers may be separated by conventional techniques well known to those skilled in the art, for example, chromatography and fractional crystallisation.

Conventional techniques for the preparation/isolation of individual enantiomers include chiral synthesis from a suitable optically pure precursor or resolution of the racemate (or the racemate of a salt or derivative) using, for example, chiral high pressure liquid chromatography (HPLC).

Alternatively, the racemate (or a racemic precursor) may be reacted with a suitable optically active compound, for example, an alcohol, or, in the case where the compound of formula (I) contains an acidic or basic moiety, an acid or base such as tartaric acid or 1-phenylethylamine. The resulting diastereomeric mixture may be separated by chromatography and/or fractional crystallization and one or both of the diastereoisomers converted to the corresponding pure enantiomer(s) by means well known to a skilled person.
Chiral compounds of the invention (and chiral precursors thereof) may be obtained in enantiomerically-enriched form using chromatography, typically HPLC, on an asymmetric resin with a mobile phase consisting of a hydrocarbon, typically heptane or hexane, containing from 0 to 50% isopropanol, typically from 2 to 20%, and from 0 to 5% of an alkylamine, typically 0.1% diethylamine. Concentration of the eluate affords the enriched mixture.

Stereoisomeric conglomerates may be separated by conventional techniques known to those skilled in the art - see, for example, “Stereochemistry of Organic Compounds” by E L Eliel (Wiley, New York; 1994).

The present invention includes all pharmaceutically acceptable isotopically-labelled compounds of formula (I) wherein one or more atoms are replaced by atoms having the same atomic number, but an atomic mass or mass number different from the atomic mass or mass number usually found in nature.

Examples of isotopes suitable for inclusion in the compounds of the invention include isotopes of hydrogen, such as $^2$H and $^3$H, carbon, such as $^{11}$C, $^{13}$C and $^{14}$C, chlorine, such as $^{35}$Cl, fluorine, such as $^{18}$F, iodine, such as $^{125}$I and $^{129}$I, nitrogen, such as $^{15}$N and $^{16}$N, oxygen, such as $^{16}$O, $^{17}$O and $^{18}$O, phosphorus, such as $^{31}$P, and sulphur, such as $^{33}$S.

Certain isotopically-labelled compounds of formula (I), for example, those incorporating a radioactive isotope, are useful in drug and/or substrate tissue distribution studies. The radioactive isotopes tritium, i.e. $^3$H, and carbon-14, i.e. $^{14}$C, are particularly useful for this purpose in view of their ease of incorporation and ready means of detection.

Substitution with heavier isotopes such as deuterium, i.e. $^2$H, may afford certain therapeutic advantages resulting from greater metabolic stability, for example,
increased \textit{in vivo} half-life or reduced dosage requirements, and hence may be preferred in some circumstances.

Substitution with positron emitting isotopes, such as $^{11}$C, $^{18}$F, $^{15}$O and $^{13}$N, can be useful in Positron Emission Topography (PET) studies for examining substrate receptor occupancy.

Isotopically-labeled compounds of formula (I) can generally be prepared by conventional techniques known to those skilled in the art or by processes analogous to those described in the accompanying Examples and Preparations using an appropriate isotopically-labeled reagents in place of the non-labeled reagent previously employed.

Pharmaceutically acceptable solvates in accordance with the invention include those wherein the solvent of crystallization may be isotopically substituted, e.g. D$_2$O, d$_6$-acetone, d$_6$-DMSO.

Compounds of the invention intended for pharmaceutical use may be administered as crystalline or amorphous products. They may be obtained, for example, as solid plugs, powders, or films by methods such as precipitation, crystallization, freeze drying, spray drying, or evaporative drying. Microwave or radio frequency drying may be used for this purpose.

The compounds of formula (I) are inhibitors of PDE5. Accordingly, in a further aspect the present invention provides for the use of a compound of formula (I), or a tautomer, salt or solvate thereof, as a pharmaceutical agent, and particularly as a therapeutic agent for the treatment of a condition where inhibition of PDE5 is known, or can be shown, to produce a beneficial effect.

The term "treatment" includes palliative, curative and prophylactic treatment.
Conditions suitable for treatment with the compounds of the invention include hypertension (including essential hypertension, pulmonary hypertension, secondary hypertension, isolated systolic hypertension, hypertension associated with diabetes, hypertension associated with atherosclerosis, and renovascular hypertension), congestive heart failure, angina (including stable, unstable and variant (Prinzmetal) angina), stroke, coronary artery disease, congestive heart failure, conditions of reduced blood vessel patency (such as post-percutaneous coronary angioplasty), peripheral vascular disease, atherosclerosis, nitrate-induced tolerance, nitrate tolerance, diabetes, impaired glucose tolerance, metabolic syndrome, obesity, sexual dysfunction (including male erectile disorder, impotence, female sexual arousal disorder, clitoral dysfunction, female hypoactive sexual desire disorder, female sexual pain disorder, female sexual orgasmic dysfunction and sexual dysfunction due to spinal cord injury), premature labour, pre-eclampsia, dysmenorrhea, polycystic ovary syndrome, benign prostatic hyperplasia, bladder outlet obstruction, incontinence, chronic obstructive pulmonary disease, acute respiratory failure, bronchitis, chronic asthma, allergic asthma, allergic rhinitis, gut motility disorders (including irritable bowel syndrome), Kawasaki's syndrome, multiple sclerosis, Alzheimer's disease, psoriasis, skin necrosis, scarring, fibrosis, pain (particularly neuropathic pain), cancer, metastasis, baldness, nutcracker oesophagus, anal fissure and haemorrhoids.

In a further aspect, the present invention provides for the use of a compound of formula (I), or a tautomer, salt or solvate thereof, for the manufacture of a medicament for the treatment of such a condition.

The compounds of the present invention may be used alone or in combination with other therapeutic agents. When used in combination with another therapeutic agent the administration of the two agents may be simultaneous or sequential. Simultaneous administration includes the administration of a single dosage form that comprises both agents and the administration of the two agents in separate dosage forms at substantially the same time. Sequential administration includes the
administration of the two agents according to different schedules provided that there is an overlap in the periods during which the treatment is provided. Suitable agents with which the compounds of formula (I) can be co-administered include aspirin, angiotensin II receptor antagonists (such as losartan, candesartan, telmisartan, valsartan, irbesartan and eprosartan), calcium channel blockers (such as amlodipine), beta-blockers (i.e. beta-adrenergic receptor antagonists such as sotalol, propranolol, timolol, antenolol, carvedilol and metoprolol), CI1027, CCR5 receptor antagonists, imidazolines, sGCa’s (soluble guanylate cyclase activators) antihypertensive agents, diuretics (such as hydrochlorothiazide, torsemide, chlorothiazide, chlorthalidone and amiloride), alpha adrenergic antagonists (such as doxazosin), ACE (angiotensin converting enzyme) inhibitors (such as quinapril, enalapril, ramipril and lisinopril), aldosterone receptor antagonists (such as eplerenone and spironolactone), neutral endopeptidase inhibitors, antidiabetic agents (such as insulin, sulfonylureas (such as glyburide, glipizide and glimepiride), glitazones (such as rosiglitazone and pioglitazone) and metformin), cholesterol lowering agents (such as atorvastatin, pravastatin, lovastatin, simvastatin, clofibrate and rosvastatin), and alpha-2-delta ligands (such as gabapentin, pregabalin, [(1R,5R,6S)-6-(aminomethyl)bicyclo[3.2.0]hept-6-yl]acetic acid, 3-(1-aminomethyl-cyclohexylmethyl)-4H-[1,2,4]oxadiazol-5-one, C-[1-(1H-tetrazol-5-yl)methyl]-cycloheptyl]-methylamine, (3S,4S)-(1-aminomethyl-3,4-dimethyl-cyclopentyl)-acetic acid, (1α,3α,5α)-(3-amino-methyl-bicyclo[3.2.0]hept-3-yl)-acetic acid, (3S,5R)-3-aminomethyl-5-methyl-octanoic acid, (3S,5R)-3-amino-5-methyl-heptanoic acid, (3S,5R)-3-amino-5-methyl-nonanoic acid and (3S,5R)-3-amino-5-methyl-octanoic acid).

The compounds of formula (I) may be administered alone or in combination with one or more other compounds of the invention or in combination with one or more other drugs (or as any combination thereof). Generally, they will be administered as a formulation in association with one or more pharmaceutically acceptable excipients. The term “excipient” is used herein to describe any ingredient other than the compound(s) of the invention. The choice of excipient will to a large extent depend
on factors such as the particular mode of administration, the effect of the excipient on solubility and stability, and the nature of the dosage form.

Pharmaceutical compositions suitable for the delivery of compounds of the present invention and methods for their preparation will be readily apparent to those skilled in the art. Such compositions and methods for their preparation may be found, for example, in ‘Remington’s Pharmaceutical Sciences’, 19th Edition (Mack Publishing Company, 1995).

The compounds of the invention may be administered orally. Oral administration may involve swallowing, so that the compound enters the gastrointestinal tract, or buccal or sublingual administration may be employed by which the compound enters the blood stream directly from the mouth.

Formulations suitable for oral administration include solid formulations such as tablets, capsules containing particulates, liquids, or powders, lozenges (including liquid-filled), chews, multi- and nano-particulates, gels, solid solution, liposome, films (including muco-adhesive), ovules, sprays and liquid formulations.

Liquid formulations include suspensions, solutions, syrups and elixirs. Such formulations may be employed as fillers in soft or hard capsules and typically comprise a carrier, for example, water, ethanol, polyethylene glycol, propylene glycol, methylcellulose, or a suitable oil, and one or more emulsifying agents and/or suspending agents. Liquid formulations may also be prepared by the reconstitution of a solid, for example, from a sachet.

The compounds of the invention may also be used in fast-dissolving, fast-disintegrating dosage forms such as those described in Expert Opinion in Therapeutic Patents, 11 (6), 981-986 by Liang and Chen (2001).
For tablet dosage forms, depending on dose, the drug may make up from 1 wt% to 80 wt% of the dosage form, more typically from 5 wt% to 60 wt% of the dosage form. In addition to the drug, tablets generally contain a disintegrant. Examples of disintegrants include sodium starch glycolate, sodium carboxymethyl cellulose, calcium carboxymethyl cellulose, croscarmellose sodium, crospovidone, polyvinylpyrrolidone, methyl cellulose, microcrystalline cellulose, lower alkyl-substituted hydroxypropyl cellulose, starch, pregelatinised starch and sodium alginate. Generally, the disintegrant will comprise from 1 wt% to 25 wt%, preferably from 5 wt% to 20 wt% of the dosage form.

Binders are generally used to impart cohesive qualities to a tablet formulation. Suitable binders include microcrystalline cellulose, gelatin, sugars, polyethylene glycol, natural and synthetic gums, polyvinylpyrrolidone, pregelatinised starch, hydroxypropyl cellulose and hydroxypropyl methylcellulose. Tablets may also contain diluents, such as lactose (monohydrate, spray-dried monohydrate, anhydrous and the like), mannitol, xylitol, dextrose, sucrose, sorbitol, microcrystalline cellulose, starch and dibasic calcium phosphate dihydrate.

Tablets may also optionally comprise surface active agents, such as sodium lauryl sulfate and polysorbate 80, and glidants such as silicon dioxide and talc. When present, surface active agents may comprise from 0.2 wt% to 5 wt% of the tablet, and glidants may comprise from 0.2 wt% to 1 wt% of the tablet.

Tablets also generally contain lubricants such as magnesium stearate, calcium stearate, zinc stearate, sodium stearyl fumarate, and mixtures of magnesium stearate with sodium lauryl sulphate. Lubricants generally comprise from 0.25 wt% to 10 wt%, preferably from 0.5 wt% to 3 wt% of the tablet.

Other possible ingredients include anti-oxidants, colourants, flavouring agents, preservatives and taste-masking agents.
Exemplary tablets contain up to about 80% drug, from about 10 wt% to about 90 wt% binder, from about 0 wt% to about 85 wt% diluent, from about 2 wt% to about 10 wt% disintegrant, and from about 0.25 wt% to about 10 wt% lubricant.

5 Tablet blends may be compressed directly or by roller to form tablets. Tablet blends or portions of blends may alternatively be wet-, dry-, or melt-granulated, melt congealed, or extruded before tableting. The final formulation may comprise one or more layers and may be coated or uncoated; it may even be encapsulated.

Solid formulations for oral administration may be formulated to be immediate and/or modified release. Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted and programmed release.

15 Suitable modified release formulations for the purposes of the invention are described in US Patent No. 6,106,864. Details of other suitable release technologies such as high energy dispersions and osmotic and coated particles are to be found in Verma et al, Pharmaceutical Technology On-line, 25(2), 1-14 (2001). The use of chewing gum to achieve controlled release is described in WO 00/35298.

The compounds of the invention may also be administered directly into the blood stream, into muscle, or into an internal organ. Suitable means for parenteral administration include intravenous, intraarterial, intraperitoneal, intrathecal, intraventricular, intraurethral, intrasternal, intracranial, intramuscular and subcutaneous. Suitable devices for parenteral administration include needle (including microneedle) injectors, needle-free injectors and infusion techniques.
Parenteral formulations are typically aqueous solutions which may contain excipients such as salts, carbohydrates and buffering agents (preferably to a pH of from 3 to 9), but, for some applications, they may be more suitably formulated as a sterile non-aqueous solution or as a dried form to be used in conjunction with a suitable vehicle such as sterile, pyrogen-free water.

The preparation of parenteral formulations under sterile conditions, for example, by lyophilisation, may readily be accomplished using standard pharmaceutical techniques well known to those skilled in the art.

The solubility of compounds of formula (I) used in the preparation of parenteral solutions may be increased by the use of appropriate formulation techniques, such as the incorporation of solubility-enhancing agents.

Formulations for parenteral administration may be formulated to be immediate and/or modified release. Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted and programmed release. Thus compounds of the invention may be formulated as a solid, semi-solid, or thixotropic liquid for administration as an implanted depot providing modified release of the active compound. Examples of such formulations include drug-coated stents and PGLA microspheres.

The compounds of the invention may also be administered topically to the skin or mucosa, that is, dermally or transdermally. Typical formulations for this purpose include gels, hydrogels, lotions, solutions, creams, ointments, dusting powders, dressings, foams, films, skin patches, wafers, implants, sponges, fibres, bandages and microemulsions. Liposomes may also be used. Typical carriers include alcohol, water, mineral oil, liquid petrolatum, white petrolatum, glycerin, polyethylene glycol and propylene glycol. Penetration enhancers may be incorporated - see, for example, J Pharm Sci, 88 (10), 955-958 by Finnin and Morgan (October 1999).
Other means of topical administration include delivery by electroporation, iontophoresis, phonophoresis, sonophoresis and microneedle or needle-free (e.g. Powderject™, Bioject™, etc.) injection.

Formulations for topical administration may be formulated to be immediate and/or modified release. Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted and programmed release.

The compounds of the invention can also be administered intranasally or by inhalation, typically in the form of a dry powder (either alone, as a mixture, for example, in a dry blend with lactose, or as a mixed component particle, for example, mixed with phospholipids, such as phosphatidylcholine) from a dry powder inhaler or as an aerosol spray from a pressurised container, pump, spray, atomiser (preferably an atomiser using electrohydrodynamics to produce a fine mist), or nebuliser, with or without the use of a suitable propellant, such as 1,1,1,2-tetrafluoroethane or 1,1,1,2,3,3,3-heptafluoropropane. For intranasal use, the powder may comprise a bioadhesive agent, for example, chitosan or cyclodextrin.

The pressurised container, pump, spray, atomizer, or nebuliser contains a solution or suspension of the compound(s) of the invention comprising, for example, ethanol, aqueous ethanol, or a suitable alternative agent for dispersing, solubilising, or extending release of the active, a propellant(s) as solvent and an optional surfactant, such as sorbitan trioleate, oleic acid, or an oligolactic acid.

Prior to use in a dry powder or suspension formulation, the drug product is micronised to a size suitable for delivery by inhalation (typically less than 5 microns). This may be achieved by any appropriate comminuting method, such as spiral jet milling, fluid bed jet milling, supercritical fluid processing to form nanoparticles, high pressure homogenisation, or spray drying.
Capsules (made, for example, from gelatin or HPMC), blisters and cartridges for use in an inhaler or insufflator may be formulated to contain a powder mix of the compound of the invention, a suitable powder base such as lactose or starch and a performance modifier such as l-leucine, mannitol, or magnesium stearate. The lactose may be anhydrous or in the form of the monohydrate, preferably the latter. Other suitable excipients include dextran, glucose, maltose, sorbitol, xylitol, fructose, sucrose and trehalose.

A suitable solution formulation for use in an atomiser using electrohydrodynamics to produce a fine mist may contain from 1μg to 10mg of the compound of the invention per actuation and the actuation volume may vary from 1μl to 100μl. A typical formulation may comprise a compound of formula (I), propylene glycol, sterile water, ethanol and sodium chloride. Alternative solvents which may be used instead of propylene glycol include glycerol and polyethylene glycol.

Suitable flavours, such as menthol and levomenthol, or sweeteners, such as saccharin or saccharin sodium, may be added to those formulations of the invention intended for inhaled/intranasal administration.

Formulations for inhaled/intranasal administration may be formulated to be immediate and/or modified release using, for example, poly(DL-lactic-coglycolic acid (PGLA). Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted and programmed release.

In the case of dry powder inhalers and aerosols, the dosage unit is determined by means of a valve which delivers a metered amount. Units in accordance with the invention are typically arranged to administer a metered dose or “puff” containing from 1μg to 20mg of the compound of formula (I). The overall daily dose will typically be in the range 1μg to 80mg which may be administered in a single dose or, more usually, as divided doses throughout the day.
The compounds of the invention may be administered rectally or vaginally, for example, in the form of a suppository, pessary, or enema. Cocoa butter is a traditional suppository base, but various alternatives may be used as appropriate.

Formulations for rectal/vaginal administration may be formulated to be immediate and/or modified release. Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted and programmed release.

The compounds of the invention may also be administered directly to the eye or ear, typically in the form of drops of a micronised suspension or solution in isotonic, pH-adjusted, sterile saline. Other formulations suitable for ocular and aural administration include ointments, biodegradable (e.g. absorbable gel sponges, collagen) and non-biodegradable (e.g. silicone) implants, wafers, lenses and particulate or vesicular systems, such as niosomes or liposomes. A polymer such as crossed-linked polyacrylic acid, polyvinylalcohol, hyaluronic acid, a cellulosic polymer, for example, hydroxypropylmethylcellulose, hydroxyethylcellulose, or methyl cellulose, or a heteropolysaccharide polymer, for example, gellan gum, may be incorporated together with a preservative, such as benzalkonium chloride. Such formulations may also be delivered by iontophoresis.

Formulations for ocular/aural administration may be formulated to be immediate and/or modified release. Modified release formulations include delayed-, sustained-, pulsed-, controlled-, targeted, or programmed release.

The compounds of the invention may be combined with soluble macromolecular entities, such as cyclodextrin and suitable derivatives thereof or polyethylene glycol-containing polymers, in order to improve their solubility, dissolution rate, taste-masking, bioavailability and/or stability for use in any of the aforementioned modes of administration.
Drug-cyclodextrin complexes, for example, are found to be generally useful for most dosage forms and administration routes. Both inclusion and non-inclusion complexes may be used. As an alternative to direct complexation with the drug, the cyclodextrin may be used as an auxiliary additive, i.e. as a carrier, diluent, or solubiliser. Most commonly used for these purposes are alpha-, beta- and gamma-cyclodextrins, examples of which may be found in International Patent Applications Nos. WO 91/11172, WO 94/02518 and WO 98/55148.

Inasmuch as it may desirable to administer a combination of active compounds, for example, for the purpose of treating a particular disease or condition, it is within the scope of the present invention that two or more pharmaceutical compositions, at least one of which contains a compound in accordance with the invention, may conveniently be combined in the form of a kit suitable for coadministration of the compositions.

Thus the kit of the invention comprises two or more separate pharmaceutical compositions, at least one of which contains a compound of formula ... in accordance with the invention, and means for separately retaining said compositions, such as a container, divided bottle, or divided foil packet. An example of such a kit is the familiar blister pack used for the packaging of tablets, capsules and the like.

The kit of the invention is particularly suitable for administering different dosage forms, for example, oral and parenteral, for administering the separate compositions at different dosage intervals, or for titrating the separate compositions against one another. To assist compliance, the kit typically comprises directions for administration and may be provided with a so-called memory aid.

For administration to human patients, the total daily dose of the compounds of the invention is typically in the range 0.1mg to 500 mg depending, of course, on the mode of administration. For example, oral administration may require a total daily
dose of from 0.1 mg to 500 mg, while an intravenous dose may only require from 0.01mg to 50mg. The total daily dose may be administered in single or divided doses.

These dosages are based on an average human subject having a weight of about 65kg to 70kg. The physician will readily be able to determine doses for subjects whose weight falls outside this range, such as infants and the elderly.

Compounds of the invention may be prepared, in known manner in a variety of ways. In the following reaction schemes and hereafter, unless otherwise stated R¹ to R⁶ are as defined in the first aspect. These processes form further aspects of the invention.

a) Compounds of formula (I'), i.e. compounds of formula (I) wherein R² is \(-Y\text{-CO}_2\)R¹⁵ and R¹⁵ is H, may generally be prepared from the corresponding esters of formula (II) wherein R⁴ is an alkyl group (particularly a methyl, ethyl, or tert-butyl group) or a benzyl group, as illustrated in Scheme 1.

**Scheme 1**

![Reaction Scheme](image)

When R¹⁵ is methyl or ethyl the conversion may conveniently be accomplished by treating the compound of formula (II) with an alkaline metal hydroxide such as lithium, sodium or potassium hydroxide in a suitable solvent at a temperature of between about 10°C and the boiling point of the solvent. Suitable solvents include water, methanol, ethanol and mixtures of water with methanol, ethanol, tetrahydrofuran and dioxan. When R¹⁵ is tert-butyl the conversion may be
accomplished by treating the compound of formula (II) with an acid such as hydrogen chloride or trifluoroacetic acid in a suitable solvent at a temperature of between 0°C and ambient temperature. Suitable solvents include dioxan and dichloromethane. When R^{15} is benzyl the conversion may conveniently be accomplished by treating the compound of formula (II) with an alkaline metal hydroxide as discussed above, or by hydrogenolysis using molecular hydrogen or a suitable hydrogen donor such as ammonium formate in the presence of a transition metal or transition metal salt catalyst such as palladium-on-carbon, in a suitable solvent, such as methanol.

When there is a functional group in another part of the structure of (I^0) that is protected, such as an amino group in R^1 or R^3, it may be convenient to select R^{15} and the protecting group such that they may both be removed in a single operation. For example, if there is an amine group protected by a BOC group, then selecting R^{15} to be tert-butyl will allow both unmasking operations to be achieved with a single acid treatment. Similarly, if benzylxycarbonyl is the preferred amine protecting group, the use of benzyl for R^{15} permits simultaneous unmasking in a single hydrogenolysis step. Alternatively, the protecting group and R^{15} may be chosen so as to be 'orthogonal', i.e. each is stable to the conditions used to cleave the other.

Unmasking is then a two stage process, but the intermediate can be subject to a purification step.

b) Compounds of formula (I^0), i.e. compounds of formula (I) wherein R^2 is \(-Y-CO_2R^{15}\) and R^{15} is not hydrogen may be prepared by esterification of the corresponding acid of formula (I^0), as illustrated in Scheme 2, but this step is only necessary if the nature of R^{15} is such that the ester group \(-CO_2R^{15}\) is not compatible with one or more of the synthetic steps used.
Scheme 2

The conversion may conveniently be accomplished by treating a mixture of the acid of formula (I\textsuperscript{C}) and an alcohol R\textsuperscript{15}-OH in a suitable solvent with a condensing agent such as a carbodiimide, e.g. dicyclohexylcarbodiimide or N-(3-dimethylaminopropyl)-N'-ethylcarbodiimide, optionally in the presence of 4-dimethylaminopyridine, at a temperature of between 0°C and the boiling point of the solvent. Suitable solvents include dichloromethane and dimethylformamide. Alternatively, the acid of formula (I\textsuperscript{C}) may be converted to the corresponding acid chloride using thionyl chloride or oxalyl chloride and then treated with the alcohol R\textsuperscript{15}-OH.

c) Compounds of formula (II\textsuperscript{i}) and (II\textsuperscript{ii}), wherein R\textsuperscript{6i} is as defined for R\textsuperscript{6} except that it cannot be hydrogen, i.e. compounds of formula (II) wherein R\textsuperscript{6} is other than H, can be prepared from compounds of formula (II\textsuperscript{i}), i.e. compounds of formula (II) wherein R\textsuperscript{6} is H, as illustrated in Scheme 3.
Scheme 3

The compound of formula (II\(^{c}\)) is treated with a base such as an alkaline metal carbonate or bicarbonate, for example potassium carbonate or caesium carbonate, or a tertiary amine, for example triethylamine, diisopropylethylamine or pyridine, and the appropriate chloride (R\(^{6A}\)-Cl), bromide (R\(^{6A}\)-Br), iodide (R\(^{6A}\)-I), mesylate (R\(^{6A}\)-OSO\(_2\)CH\(_3\)) or tosylate (R\(^{6A}\)-OSO\(_2\)Tol) in a suitable solvent at a temperature of between -70°C and 100°C. Suitable solvents include ethers such as tetrahydrofuran and dioxan, dimethylformamide and acetonitrile. Stronger bases such as sodium hydride, potassium tert-butoxide and sodium or potassium hexamethyldisilazide may also be used. Alternatively, the transformation may be achieved using the Mitsunobu reaction, in which a solution of the compound of formula (II\(^{c}\)) and the appropriate alcohol R\(^{6A}\)-OH in a suitable solvent is treated with triphenylphosphine and a dialkylazodicarboxylate such as diethyl azodicarboxylate or diisopropyl azodicarboxylate. A preferred solvent is tetrahydrofuran. The reaction is preferably performed at a temperature of between -10°C and ambient temperature.
When the reaction gives a mixture of the two products (II^a) and (II^b), these can be separated using standard techniques.

The introduction of R^6 at this stage of the synthetic sequence is not always necessary. It is often more convenient to introduce R^6 at an early stage and carry it through to the final product.

d) Compounds of formula (II) can be prepared from the corresponding monochlorides of formula (III) by reaction with HNR^3R^4 as illustrated in Scheme 4.

![Scheme 4](image)

A solution of the monochloride (III) and the amine HNR^3R^4 in a suitable dipolar aprotic solvent are stirred at elevated temperature for between 1 and 24 hours. Suitable solvents include dimethylsulfoxide, dimethylformamide and N-methylpyrrolidinone. An excess of a tertiary amine such as N-ethyldiisopropylamine, N-methylmorpholine or triethylamine and/or a fluoride source such as caesium fluoride or tetraethylammonium fluoride may optionally be included.

It is sometimes necessary to perform the reaction at elevated pressure in a closed vessel, particularly when the amine HNR^3R^4 or the solvent is volatile. It will be appreciated that any functional groups in HNR^3R^4, and particularly any primary or secondary amine groups, may need to be protected in order to allow this reaction to proceed successfully.
Preferably, the monochloride is treated with 3-5 equivalents of the amine HNR³R⁴ and optionally 2-5 equivalents of N-ethylidisopropylamine in dimethylsulfoxide or N-methylpyrrolidinone, optionally in the presence of caesium fluoride or tetraethylammonium fluoride, at 80-125°C for 12-18 hours, optionally in a closed vessel.

Alternatively, the compounds of formula (III) may be hydrolysed as described in part a) above to provide the corresponding carboxylic acid of formula (IV) which is then treated with amine HNR³R⁴ to provide compounds of formula (I⁵), as illustrated in scheme 4a.

```
Scheme 4a
```

Preferably, the monochloride (IV) is treated with 3-5 equivalents of the amine HNR³R⁴ and optionally 2-5 equivalents of N-ethylidisopropylamine in dimethylsulfoxide or N-methylpyrrolidinone, optionally in the presence of caesium fluoride or tetraethylammonium fluoride, at 80-125°C for 12-18 hours, optionally in a closed vessel.
e) Compounds of formula (III) can be prepared from the corresponding dichlorides of formula (V) by reaction with HNR'R" as illustrated in Scheme 5.

Preferably, the monochloride is treated with 3-5 equivalents of the amine HNR'R" and optionally 2-5 equivalents of N-ethyldiisopropylamine in dimethylsulfoxide or N-methylpyrrolidinone, optionally in the presence of caesium fluoride or tetraethylammonium fluoride, at 80-125°C for 12-18 hours, optionally in a closed vessel.

Scheme 5

A solution of the dichloride (V), the amine HNR'R" and optionally an excess of a tertiary amine such as N-ethyldiisopropylamine, N-methylmorpholine or triethylamine in a suitable solvent are stirred at ambient or elevated temperature for between 1 and 24 hours. Suitable solvents include dichloromethane, dimethylsulfoxide, dimethylformamide, acetonitrile, tetrahydrofuran and N-methylpyrrolidinone. It will be appreciated that any functional groups in HNR'R", and particularly any primary or secondary amine groups, may need to be protected in order to allow this reaction to proceed successfully. Preferably, the monochloride is treated with 3-5 equivalents of the amine HNR'R" and optionally 3-5 equivalents of N-ethyldiisopropylamine in dichloromethane, dimethylsulfoxide or a mixture of dimethylsulfoxide and N-methylpyrrolidinone at 25-90°C for 1-18 hours.
Alternatively, a solution of the amine HNR'R'' in a suitable solvent is treated with butyllithium or sodium hexamethyldisilazide at low temperature, and the dichloride is added to the resulting solution. Suitable solvents include tetrahydrofuran, dioxan and N-methylpyrrolidinone.

In certain cases, particularly when Y is a covalent bond and the amine HNR'R'' is only weakly nucleophilic, the direct transformation of compounds of formula (V) into compounds of formula (III) gives unsatisfactory results and a more indirect alternative route may be employed. This route is described in part w) below.

f) Compounds of formula (V) can be prepared from the corresponding pyrazolopyrimidinediones of formula (VI) as illustrated in Scheme 6.

Scheme 6

The dione is treated with a large excess of a suitable chlorinating reagent such as phosphorus oxychloride (POCl₃) or phenylphosphonyl dichloride (PhP(O)Cl₂) in the presence of a tertiary amine such as N-ethylidiisopropylamine, N-methylmorpholine, triethylamine or N,N-dimethylaniline at elevated temperature for 8-48 hours. Dimethylformamide can optionally be added as a catalyst. Alternatively, the dione is treated with POCl₃ or PhP(O)Cl₂ in a suitable solvent in the presence of a tetraalkylammonium chloride, such as tetraethylammonium chloride, and optionally in the presence of a tertiary amine such as N-ethylidiisopropylamine at elevated temperature. Suitable solvents include acetonitrile and propionitrile. Preferably, the dione is treated with 10-30 equivalents of POCl₃ and 3-5 equivalents of tetraethylammonium chloride in propionitrile or acetonitrile at reflux for 4-24 hours.
g) Compounds of formula (VI) can be prepared from the corresponding aminoamides of formula (VII) as illustrated in Scheme 7.

5 **Scheme 7**

![Chemical Structure](image)

(VII) \[\rightarrow\] (VI)

A solution of the pyrazolecarboxamide (VII) and phosgene or an equivalent thereof, such as 1,1'-carbonyldiimidazole, trichloromethyl chloroformate or bis(trichloromethyl) carbonate, in a suitable solvent is stirred at a temperature of between ambient temperature and the boiling point of the solvent, optionally at elevated pressure, for between 2 and 18 hours. Suitable solvents include acetonitrile, dichloromethane and dimethylformamide. Preferably, a solution of the amine of formula (VII) and 1-2.5 equivalent of 1,1'-carbonyldiimidazole in N,N-dimethylformamide, acetonitrile or dichloromethane is heated at between room temperature and the reflux temperature of the reaction for 1-18 hours.

h) Compounds of formula (VII) can be prepared from the corresponding nitroamides of formula (VIII) as illustrated in Scheme 8.

20 **Scheme 8**

![Chemical Structure](image)

(VIII) \[\rightarrow\] (VII)
Reduction of the nitro group can be achieved by, for example, by transfer or catalytic hydrogenation, or by a dissolving metal reduction.

For transfer hydrogenation, the nitro compound is reacted with a suitable hydrogen donor, such as ammonium formate or cyclohexene, in a polar solvent, such as tetrahydrofuran, methanol or ethanol, in the presence of a transition metal or transition metal salt catalyst, such as palladium or palladium(II) hydroxide, optionally at elevated temperature and pressure.

For catalytic hydrogenation, a solution of the nitro compound in a polar solvent, such as tetrahydrofuran, methanol or ethanol, is stirred under a hydrogen atmosphere in the presence of a transition metal or transition metal salt catalyst, such as palladium or palladium(II) hydroxide, optionally at elevated pressure and temperature. The catalyst may be in solution (homogeneous catalysis) or in suspension (heterogeneous catalysis).

For dissolving metal reduction, the nitro compound is treated with a suitable reactive metal, such as zinc or tin, in the presence of an acid such as acetic acid or hydrochloric acid. Other reducing agents, such as tin(II) chloride, may also be used.

i) Compounds of formula (VIII) can be prepared from the corresponding nitroesters of formula (IX) as illustrated in Scheme 9.
Scheme 9

The methyl ester of the compounds of formula (IX) can be hydrolysed as described in part a) above. The acid is then converted to the corresponding acid chloride by treatment with oxalyl chloride and dimethylformamide in a suitable solvent such as dichloromethane, or with thionyl chloride. Finally, a solution of the acid chloride in a suitable solvent such as dichloromethane, tetrahydrofuran or dioxan is treated with gaseous ammonia or aqueous ammonia at between -78°C and room temperature to provide the amide of formula (VIII).

In the embodiments (IX\textsuperscript{a}) in which Y is a covalent bond and R\textsuperscript{16} is a methyl group, the use of one equivalent of metal hydroxide leads to the chemoselective hydrolysis of the ester group adjacent to the R\textsuperscript{6} substituent (Chambers, D. et al., J. Org. Chem. 50, 4736-4738, 1985), as illustrated in scheme 9A.
j) Compounds of formula (IX\(^6\)), wherein R\(^{6A}\) is any group according to R\(^6\) except hydrogen, i.e. compounds of formula (IX) except those wherein R\(^6\) is hydrogen, can be prepared from the corresponding esters of formula (IX\(^5\)) as illustrated in Scheme 10.

The compounds of formula (IX\(^5\)) are treated with a combination of an alkylating agent and a base, or with an alcohol, triphenylphosphine and a dialkyl azodicarboxylate, as described in part c) above.

k) The compound of formula (IX\(^5\)) wherein R\(^{15}\) is methyl and Y is a covalent bond is described in published international patent application WO00/24745 (see preparation 2, page 48). Other compounds of formula (IX), and particularly compounds of formula (IX\(^5\)), can be prepared in two steps from the diacids of formula (X), as illustrated in scheme 11.
In the first step, the compounds of formula (X) are treated with a nitrating agent such as nitric acid or a mixture of nitric acid and sulphuric acid to provide the compounds of formula (XI). In the second step, the two carboxylic acid groups are esterified. When $R^{15}$ is methyl, this is conveniently achieved in a single operation. When $R^{15}$ is other than methyl, two sub-steps are necessary, and the order in which the two groups are esterified will depend on the nature of $Y$ and $R^6$. Suitable conditions for forming esters are well known in the art. When $R^{15}$ is methyl, a preferred method is to treat the diacid with thionyl chloride so as to form the bis-chloride and then react this with methanol.

I) Certain compounds of formula (X) are commercially available or are described in the literature, in particular those wherein $Y$ is a covalent bond.

Compounds of formula (X) that are not items of commerce can be prepared as illustrated in Schemes 12, 13 and 14.
The method illustrated in Scheme 12 is the Knorr pyrazole synthesis. A 1,3-diketone of formula (XII) is reacted with hydrazine to give a pyrazole of formula (XIII\textsuperscript{A}), or with a substituted hydrazine R\textsuperscript{6A}-NHNH\textsubscript{2}, wherein R\textsuperscript{6A} is as defined in part c) above, to give a pyrazole of formula (XIII\textsuperscript{B}).

Pyrazoles of formula (XIII\textsuperscript{B}) may also be obtained by N-alkylation of the corresponding pyrazoles of formula (XIII\textsuperscript{B}) following the method described in part c) above. Hydrolysis of the ester groups as described in part a) above then provides the compounds of formula (X).

Compounds of formula (XII) can be prepared from the corresponding methyl ketones of formula (XIV) using a crossed Claisen condensation as illustrated in Scheme 13.
Scheme 13

A methyl ketone of formula (XIV) is reacted with dimethyl oxalate in a suitable solvent in the presence of a suitable base. Suitable solvents include ethers, such as tetrahydrofuran. Suitable bases include sodium hydride, potassium tert-butoxide and lithium diisopropylamide. Alternatively, sodium methoxide may be used as the base and methanol as the solvent.

Scheme 14
The method illustrated in scheme 14 is the Pechmann pyrazole synthesis. A diazo compound and an acetylene are combined to produce a pyrazole of formula (XIII\(^a\)). When Y is other than a covalent bond two variants of the method can be considered. An acetylene of formula (XV) can be combined with methyl diazoacetate, or a diazo compound of formula (XVI) can be combined with methyl propiolate. The product of formula (XIII\(^a\)) may be carried forward as described above.

In addition to the methods described above, certain compounds of general formulae (III) and (IV) may be prepared by modification of the substituent at the C-3 position of the pyrazolopyrimidine, as further illustrated below. It will be appreciated that the synthetic transformations discussed may also be used in the elaboration of precursor compounds such as the pyrazoles of formula (IX).

m) Compounds of formula (III\(^a\)), i.e. compounds of formula (III) wherein Y is CH\(_2\), may be prepared from the corresponding compounds of formula (IV\(^a\)), i.e. compounds of formula (IV) wherein Y is a covalent bond, by a one-carbon homologation method such as the Arndt-Eistert reaction illustrated in Scheme 15.

**Scheme 15**

![Scheme 15](image)

The carboxylic acid is converted to a reactive intermediate such as the acid chloride (by reaction with oxalyl chloride) or a mixed anhydride (by reaction with isobutyl chloroformate). The intermediate is reacted with diazomethane to provide an α-
diazoketone. This is treated with silver oxide in the presence of R^{14}-OH to give the homologated ester of formula (III').

n) Compounds of formula (IV'), i.e. compounds of formula (IV) wherein Y is CH₂, may be prepared from the corresponding nitriles of formula (XVII) by the method illustrated in Scheme 16.

Scheme 16

The nitrile can be hydrolysed, e.g. by treatment with aqueous mineral acids, such as hydrochloric acid.

o) Compounds of formula (XVII) can be prepared from the corresponding chlorides of formula (XVIII) by the method illustrated in Scheme 17.

Scheme 17
The chloride is treated with a metal cyanide, such as sodium cyanide or potassium cyanide in a suitable solvent, such as dimethylsulfoxide, dimethylformamide or ethanol.

p) Compounds of formula (XVIII) can be prepared from the corresponding alcohols of formula (XIX) by the method illustrated in Scheme 18.

Scheme 18

The alcohol is treated with a mixture of triphenylphosphine and N-chlorosuccinimide or tetrachloromethane, or with thionyl chloride.

q) Compounds of formula (XIX) can be prepared from the corresponding esters of formula (III^6), i.e. compounds according to formula (III) wherein Y is a covalent bond, or from the corresponding acids of formula (IV^6) by the method illustrated in Scheme 19.
The acids of formula (IVA) and the esters of formula (IVB) can be reduced to the alcohols of formula (XIX) by treatment with lithium aluminium hydride in a suitable solvent at a temperature of between 0°C and the boiling point of the solvent. Suitable solvents include ethers such as tetrahydrofuran. The acids can also be reduced by treatment with isobutyl chloroformate and a tertiary amine base to provide a mixed anhydride, followed by reaction with sodium borohydride. The esters can also be reduced by treatment with disobutylaluminium hydride or lithium borohydride.

Compounds of formula (VII), i.e. compounds of formula (III) wherein X is CH₂CH₂ can be prepared from the corresponding acrylate ester of formula (XX) by the method illustrated in Scheme 20.
Scheme 20

The reduction of the carbon-carbon double bond of (XX) to give the compounds of formula (III\(^\circ\)) can be accomplished by catalytic hydrogenation using molecular hydrogen in the presence of a transition metal catalyst such as palladium, platinum or nickel. When \(R^{16}\) is benzyl the conditions can be chosen such that only the double bond is reduced or reduction is accompanied by hydrogenolytic cleavage of the ester to give the carboxylic acid.

The acrylates of formula (XX) can also be treated with alkylcopper reagents to give analogues of the compounds of formula (III\(^\circ\)) in which an alkyl substituent is introduced on the carbon atom adjacent to the pyrazolopyrimidine ring system, or with a sulphonium ylid or a carbene equivalent to give a 2-(pyrazolopyrimidinyl)cyclopropane-1-carboxylate derivative.

s) Compounds of formula (XX) can be prepared from the corresponding aldehydes of formula (XXI) by the method illustrated in Scheme 21.
Scheme 21

The aldehyde of formula (XXI) can be converted to the acrylate ester of formula (XX) by reaction with a phosphorus reagent following the protocols of the Wittig, Horner or Wadsworth-Horner-Emmons reactions. The reagent is prepared by treating a triphenylphosphonium salt Ph₃P⁺CH₂CO₂R¹⁵⁺X⁻ (Wittig), a phosphine oxide Ph₂P(O)CH₂CO₂R¹⁵⁻ (Horner), or a phosphonate (EtO)₂P(O)CH₂CO₂R¹⁵⁻ (Wadsworth-Horner-Emmons), with a base such as butyllithium, a lithium dialkylamide or an alkaline metal alkoxide, in a suitable solvent such as tetrahydrofuran, wherein X⁻ is a suitable anion such as a halide, for example chloride, bromide or iodide.

The method is not limited to the preparation of α-unsubstituted acrylate esters. The use of an alkyl-substituted phosphorus reagent such as Ph₃P⁺CH(R°).CO₂R¹⁵⁻.X⁻ or the equivalent phosphine oxide or phosphonate, wherein R° is alkyl, and further wherein X⁻ is a suitable anion such as a halide, for example chloride, bromide or iodide, gives access to the corresponding α-alkyl acrylate derivative (XX²²).
The conversion of the aldehydes of formula (XXI) to acrylate esters of formula (XX) can also be achieved by reaction with a malonate derivative following the method of the Knoevenagel condensation.

5 t) Compounds of formula (XXI) can be prepared from the esters of formula (III\(^8\)) or more preferably from the corresponding alcohols of formula (XIX) by the methods illustrated in Scheme 22.

Scheme 22

The reduction of the esters of formula (III\(^8\)) can be achieved using diisobutylaluminium hydride (DIBAL) in a suitable solvent at a temperature of less than 0°C, preferably less than -60°C. Suitable solvents include hydrocarbons such as pentane, hexane and toluene, ethers such as tetrahydrofuran, and mixtures thereof.

The oxidation of the alcohols of formula (XIX) can be achieved using a chromium(VI) reagent such as pyridinium chlorochromate, a hypervalent iodine reagent such as
the Dess-Martin periodinane, or a combination of tetra-n-propylammonium perruthenate and N-methylmorpholine-N-oxide in a suitable solvent at a temperature of between 0°C and ambient temperature. Suitable solvents include dichloromethane.

u) The aldehydes of formula (XXI) may be converted to esters of formula (III\textsuperscript{4}) as illustrated in Scheme 23

Scheme 23

The aldehyde is treated with methyl methylmercaptomethyl sulfoxide (CH\textsubscript{3}SCH\textsubscript{2}S(O)CH\textsubscript{3}) and triton B in tetrahydrofuran to give intermediate (XXII) which is treated with the appropriate alcohol R\textsuperscript{15}OH and acetyl chloride to provide the ester of formula (III\textsuperscript{4}). This method is particularly useful when R\textsuperscript{15} is methyl.

v) Compounds of formula (III\textsuperscript{5}) can also be prepared from the corresponding chlorides of formula (XVIII) by the method illustrated in Scheme 24.
Scheme 24

The chloride of formula (XVIII) is reacted with a dialkyl malonate \((R^{15}O_2C)_2CH_2\) and a base in a suitable solvent. Typically, the base is an alkaline metal alkoxide such as sodium ethoxide or potassium tert-butoxide, and the solvent is an alcohol such as ethanol or an ether such as tetrahydrofuran. Preferably the base and the solvent are chosen such as to minimise transesterification with the malonate reagent and the intermediate (XXIII). For example, when the reagent is diethyl malonate the base is preferably sodium ethoxide and the solvent is ethanol. The intermediate (XXIII) is then decarboxylated to give the product (III\(^c\)). This can be achieved by selective hydrolysis using one equivalent of an alkaline metal hydroxide, such as sodium hydroxide, followed by acidification, or by any other method known in the art.

The method is not limited to symmetrical malonates. For example, the use of tert-butyl methyl malonate would give an intermediate (XXIII) in which one \(R^{15}\) is methyl and the other is tert-butyl. By choosing the appropriate conditions, decarboxylation could then be controlled to give a product (III\(^c\)) in which \(R^{15}\) was either tert-butyl or methyl.
The method can be extended to substituted malonates \((R^{15}\text{O}_2\text{C})_2\text{CHR}\), where \(R\) is an alkyl group. This gives access to compounds analogous to (IIF) in which the group \(R\) is a substituent on the carbon atom adjacent to the \(R^{15}\text{O}_2\text{C}\) group. These compounds can also be prepared by alkylating the intermediate (XXIII) with \(R\text{-Br}\) or \(R\text{-I}\) in the presence of an alkaline metal alkoxide base.

As mentioned in part e) above, the reaction of compounds of formula \((V^a)\), i.e. compounds of formula (V) wherein \(Y\) is a covalent bond, with weakly nucleophilic amines \(HNR^1R^2\) is sometimes not high yielding. An alternative route is illustrated in Schemes 25A and 25B.

Scheme 25A

The esters of formula \((V^a)\) can be reduced to the alcohols of formula (XXIV) according to the methods described in part q) above. A preferred method is reduction with diisobutylaluminium hydride at a temperature of between -20°C and 0°C. The primary alcohol is then protected to give compounds of formula (XXV), wherein PG is an alcohol protecting group. A preferred protecting group is a trialkylsilyl group, particularly a tert-butyldimethylsilyl group. The compounds of
formula (XXV) are then reacted with an amine HNR\(^1\)R\(^2\) according to the methods described in part e) above to give compounds of formula (XXVI).

Scheme 25B

![Chemical structures](image)

The compounds of formula (XXVI) are deprotected to provide the primary alcohols of formula (XXVII) using appropriate conditions. When PG is a trialkylsilyl group it may be removed by treatment with a fluoride salt, such as tetrabutylammonium fluoride, or with hydrochloric acid. The \(-\text{NR}^3\text{R}^4\) group is then introduced according to the methods described in part d) above to provide compounds of formula (XXVIII). The primary alcohol is oxidised as described in part t) above to provide the aldehydes of formula (XXIX). A preferred oxidising agent is the Dess-Martin periodinane. Finally
the aldehydes of formula (XXIX) are oxidised to provide the acids of formula (I), i.e. compounds of formula (I) wherein Y is a covalent bond. Suitable oxidising agents include potassium permanganate, Jones’ reagent and sodium chlorite. A preferred method is to treat the aldehydes with sodium chlorite, sodium dihydrogenphosphate and 2-methyl-2-butene in tert-butanol at room temperature for about 1 hour.

Alternatively, it may be preferred to perform the oxidation of the alcohol of formula (XXVII) to the corresponding acid (via the corresponding aldehyde), using the methods previously described, prior to reaction with HNR₃R⁴, to provide the compound of formula (I).

x) Compounds of formula (I), i.e. compounds of formula (I) wherein R⁵ is -Y-R¹⁴ can be prepared from the corresponding monochlorides of formula (XXX) as illustrated in Scheme 26.

Scheme 26

![Scheme 26 Diagram]

The monochlorides of formula (XXX) are reacted with amines HNR₃R⁴ as described in part d) above.

Alternatively, the -NR³R⁴ group may be introduced into a suitable precursor and the -Y-R¹⁴ group elaborated subsequently.
y) Compounds of formula \((XXX')\), i.e. compounds of formula \((XXX)\) wherein \(R^{16}\) is -\(\text{CONHR}^{18}\) can be prepared from the corresponding compounds of formula \((IV)\) as illustrated in Scheme 27.

Scheme 27

The acid of formula \((IV)\) is treated with the appropriate sulfonamide \(R^{18}\)-\(\text{NH}_2\) and a carbodiimide in a suitable solvent in the presence of 4-(dimethylamino)pyridine. A suitable solvent is dimethylformamide or dichloromethane. It is sometimes preferred to introduce the \(R^{18}\)-\(\text{NH}_2\) group in the final step, i.e. after elaboration of the \(-\text{NR}^{2}\text{R}^{4}\) group.

Preferably, the acid is treated with 1.3 equivalents of 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride, 1.3 equivalents of 4-dimethylaminopyrididine and 1.2-1.3 equivalents of the sulphonamide \(R^{19}\text{NH}_2\), in dichloromethane at about room temperature for up to 18 hours.

z) Compounds of formula \((XXX)\) wherein \(R^{16}\) is a heterocyclic carboxylic isostere such as tetrazol-5-yl (compounds of formula \((XXX^6)\)), 5-trifluoromethyl-1,2,4-triazol-3-yl (compounds of formula \((XXX^5)\)) and 2,5-dihydro-5-oxo-1,2,4-oxadiazol-3-yl (compounds of formula \((XXX^5)\)) can be prepared from compounds of formula \((XXXI)\) using standard methods such as those illustrated in Scheme 28A, 28B and 28C.
The nitrile of formula (XXXI) is treated with an azide, such as an alkaline metal azide (M = Na, K), a trialkylsilyl azide (M = alkyl₃Si) or a trialkyltin azide (M = alkyl₃Sn), in a suitable solvent at a temperature of between ambient temperature and the boiling point of the solvent. A preferred azide is tributyltin azide. A preferred solvent is dioxan.
The nitrile of formula (XXXI) is treated with ethanol and hydrogen chloride to form an imidate, which is then treated with ammonia to form an amidine. The amidine is treated with ethyl trifluoroacetate and hydrazine to provide the triazole of formula (XXX^C). The 5-(methylsulfonyl)-substituted triazole can be prepared in an analogous manner.

Scheme 28C

The nitrile of formula (XXXI) is treated with hydroxylamine to form an N-hydroxyamidine, which is then treated with 1,1'-carbonyldiimidazole to provide the oxadiazolone of formula (XXX^D).

aa) Compounds of formula (XXXI) can be prepared using the methods described in part o) above, or from compounds of formula (IV) using the method illustrated in Scheme 29.
The acid of formula (IV) is converted into the corresponding primary amide following the method described in part i) above. The amide is then dehydrated using trifluoroacetic anhydride.

bb) Compounds of formula (III) or (XXXI) wherein Y is $-\text{CH}_2\text{-O-CH}_2-$ may be prepared from the alcohols of formula (XIX) by alkylation with an alkyl $\alpha$-haloacetate or an $\alpha$-haloacetonitrile derivative, as illustrated in scheme 29.
Hal is chlorine, bromine or iodine, preferably chlorine or bromine. The alcohol (XIX) and alkylating agent are combined in a suitable solvent in the presence of a base such as potassium carbonate or sodium hydride. Suitable solvents include tetrahydrofuran and dimethylformamide.

It will be appreciated by those skilled in the art that certain compounds of formula (I) may undergo standard chemical transformations to provide alternative compounds of formula (I), for example the preparation of example 184, by dealkylation of an alkyl ether.

For some of the steps of the here above described process of preparation of the compounds of formula (I), it may be necessary to protect potential reactive functions that are not wished to react, and to cleave said protecting groups in consequence. In such a case, any compatible protecting radical can be used. In particular methods of protection and deprotection such as those described by T.W. GREENE (Protective Groups in Organic Synthesis, A. Wiley-Interscience Publication, 1981) or by P. J. Kocienski (Protecting groups, Georg Thieme Verlag, 1994), can be used.
The following compounds form further aspects of the present invention:

A compound of formula (III)

\[
\begin{align*}
\text{R}^1 & \quad \text{N} \quad \text{R}^2 \\
\text{R}^6 & \quad \text{N} \quad \text{N} \\
\text{N} & \quad \text{N} \\
\text{Cl} & \quad \text{R}^\text{A} \text{O}_2 \text{C} \quad \text{Y} \\
\end{align*}
\]

wherein \(R^1, R^2, R^6, R^A\) and \(Y\) are as defined above.

Preferred is a compound of formula (III\(^D\))

\[
\begin{align*}
\text{R}^1 & \quad \text{N} \quad \text{R}^2 \\
\text{R}^6 & \quad \text{N} \quad \text{N} \\
\text{N} & \quad \text{N} \\
\text{Cl} & \quad \text{R}^\text{A} \text{O}_2 \text{C} \quad \text{Y} \\
\end{align*}
\]

wherein \(R^1, R^2, R^6, R^A\) and \(Y\) are as defined above.

A compound of formula (V)

\[
\begin{align*}
\text{Cl} & \quad \text{R}^6 \text{N} \quad \text{N} \\
\text{N} & \quad \text{N} \\
\text{Cl} & \quad \text{R}^\text{A} \text{O}_2 \text{C} \quad \text{Y} \\
\end{align*}
\]

wherein \(R^6, R^A\) and \(Y\) are as defined above.
Preferred is a compound of formula (Vb)

\[
\begin{align*}
&\text{R}^6 \quad \text{Cl} \\
&\text{N} \quad \text{N} \\
&\text{R}^A \text{O}_2 \text{C} - \text{Y} \\
&\text{Cl}
\end{align*}
\]

(Vb)

wherein \( R^6 \), \( R^A \) and \( Y \) are as defined above.

The invention is further illustrated by the following, non-limiting examples. Melting points were determined on a Gallenkamp melting point apparatus using glass capillary tubes and are uncorrected. Unless otherwise indicated all reactions were carried out under a nitrogen atmosphere, using commercially available anhydrous solvents. ‘0.88 Ammonia’ refers to commercially-available aqueous ammonia solution of about 0.88 specific gravity. Thin-layer chromatography was performed on glass-backed pre-coated Merck silica gel (60 F254) plates, and silica gel column chromatography was carried out using 40-63 \( \mu \)m silica gel (Merck silica gel 60). Ion exchange chromatography was performed using with the specified ion exchange resin which had been pre-washed with deionised water. Proton NMR spectra were measured on a Varian Inova 300, Varian Inova 400, or Varian Mercury 400 spectrometer in the solvents specified. In the NMR spectra, only non-exchangeable protons which appeared distinct from the solvent peaks are reported.

Low resolution mass spectra were recorded on either a Fisons Trio 1000, using thermospray positive ionisation, or a Finnigan Navigator, using electrospray positive or negative ionisation. High resolution mass spectra were recorded on a Bruker Apex II FT-MS using electrospray positive ionisation. Combustion analyses were conducted by Exeter Analytical UK, Ltd., Uxbridge, Middlesex. Optical rotations were determined at 25°C using a Perkin Elmer 341 polarimeter using the solvents
and concentrations specified. Example compounds designated as (+) or (-) optical isomers are assigned based on the sign of optical rotation when determined in a suitable solvent.

The following Examples illustrate the preparation of the compounds of the formula (I):-
Preparation 1

**tert-Butyl (3R)-3-methoxypyrrolidine-1-carboxylate**

![Chemical Structure](image)

*tert*-Butyl (3R)-3-hydroxyprrolidine-1-carboxylate (12.5g, 66.70mmol) was dissolved in tetrahydrofuran (334mL) and the reaction mixture cooled to 0°C in an ice bath. The reaction mixture was treated with 80% sodium hydride in mineral oil (2.20g, 73.3mmol) and stirred until back at room temperature. The reaction mixture was then treated with methyl iodide (14.5g, 100.0mmol) and stirred at room temperature for 18 hours. The reaction mixture was diluted with water (100mL) and concentrated in vacuo until just the aqueous remained. The aqueous solution was treated with ethyl acetate (750mL), the organic layer separated, dried over magnesium sulphate and concentrated in vacuo to yield the title product as a brown oil, 12.48g.

^1^H NMR (CDCl₃, 400MHz) δ: 1.41 (s, 9H), 1.95 (m, 2H), 3.30 (s, 3H), 3.40 (m, 4H), 3.86 (m, 1H)

Preparation 2

**tert-Butyl (3S)-3-methoxypyrrolidine-1-carboxylate**

![Chemical Structure](image)

The title product was prepared by a method similar to that described for preparation 1 using *tert*-butyl (3S)-3-hydroxyprrolidine-1-carboxylate.

^1^H NMR (CDCl₃, 400MHz) δ: 1.41 (s, 9H), 1.95 (m, 2H), 3.30 (s, 3H), 3.40 (m, 4H), 3.86 (m, 1H)
Preparation 3
(3R)-3-Methoxy-pyrrolidine hydrochloride

Hydrogen chloride gas was bubbled through an ice-cooled solution of the compound from preparation 1 (6.02g, 30.0mmol) in dichloromethane (30mL), and the reaction then allowed to warm to room temperature and stirred for 48 hours. The solution was concentrated under reduced pressure and the residue triturated with ether. The resulting crystals were filtered off and dried in vacuo to afford the title compound. \(^1\)H NMR (CD\(_2\)OD, 400MHz) \(\delta\): 2.06 (m, 1H), 2.20 (m, 1H), 3.26-3.42 (m, 7H), 4.17 (m, 1H).

Preparation 4
(3S)-3-Methoxy-pyrrolidine hydrochloride

The title compound was obtained from the compound from preparation 2, following a similar method to that described in preparation 3. \(^1\)H NMR (CD\(_2\)OD, 400MHz) \(\delta\): 2.14 (m, 1H), 2.20 (m, 1H), 3.24-3.44 (m, 7H), 4.18 (m, 1H).

Preparation 5
2-Chloropyrimidin-4-ylamine

2,4-Dichloropyrimidine (625mg, 4.23mmol) was dissolved in n-butanol (3mL) and the solution treated with ammonia (620\(\mu\)L). The reaction mixture was heated to 100°C for 20 minutes before being allowed to cool to room temperature. Methanol was added to help dissolved the precipitate formed on cooling and the solution was
concentrated in vacuo. The residue was purified by column chromatography on silica
gel eluting with dichloromethane:methanol 100:0 to 96:4.

^1H NMR (CD$_3$OD, 400MHz) δ: 6.41 (d, 1H), 7.90 (d, 1H)

**Preparation 6**

2-Methoxypyrimidin-4-ylamine

![Chemical structure](image)

The chloro compound of preparation 5 (1.52g, 11.8mmol) was dissolved in methanol
(17mL) and the solution treated with a 4.62M solution of sodium methoxide in
methanol (2.8mL, 12.9mmol). The reaction mixture was then refluxed under nitrogen
for 6 hours. The reaction mixture was filtered whilst hot and concentrated in vacuo to
a volume of 2mL and the solid allowed to crystallise out. The crude product was
recrystallised from methanol and dried in an oven to yield the title product, 390mg.

^1H NMR (DMSO-D$_6$, 400MHz) δ: 3.75 (s, 3H), 6.05 (d, 1H), 6.80 (m, 2H), 7.80 (d, 1H)

**Preparation 7**

Dimethyl 4-nitro-1-(2-propoxyethyl)-1H-pyrazole-3,5-dicarboxylate

![Chemical structure](image)

Dimethyl 4-nitro-1H-pyrazole-3,5-dicarboxylate (WO00/24745, page 48, preparation
2) (15g, 60mmol), 2-propoxyethanol (8.2mL, 70mmol) and triphenylphosphine
(18.9g, 70mmol) were dissolved in tetrahydrofuran (150mL) and the solution cooled
to 0°C. The solution was treated with diisopropyl azodicarboxylate (14.2mL,
70mmol) and the reaction mixture stirred at 0°C for 3 hours before being allowed to
warm to room temperature. The reaction mixture was concentrated in vacuo and the
residue purified by column chromatography on silica gel eluting with ethyl
acetate: pentane 15:85 and then again eluting with dichloromethane to yield the title product.

^H NMR (CD\textsubscript{3}OD, 400MHz) \( \delta \): 0.82 (t, 3H), 1.47 (q, 2H), 3.34 (t, 2H), 3.78 (t, 2H), 3.91 (s, 6H), 4.76 (t, 2H). MS APCI+ m/z 316 [MH]^+

Preparation 8

\textbf{Dimethyl (2'R)-1-(2'-methoxypropyl)-4-nitro-1H-pyrazole-3,5-dicarboxylate}

The title compound was prepared by a method similar to that described for preparation 7 using (2R)-2-methoxypropanol (Chem. Eur. J., 1997, 3 (12), 2063-2070). The title product was purified by column chromatography on silica gel eluting with pentane:dichloromethane 20:80.

^H NMR (CDCl\textsubscript{3}, 400MHz) \( \delta \): 1.18 (d, 3H), 3.20 (s, 3H), 3.70 (m, 1H), 3.92 (s, 3H), 3.94 (s, 3H), 4.42 (m, 1H), 4.74 (m, 1H). MS APCI+ m/z 302 [MH]^+

Preparation 9

\textbf{Dimethyl 1-(2-isopropoxyethyl)-4-nitro-1H-pyrazole-3,5-dicarboxylate}

Dimethyl 4-nitro-1H-pyrazole-3,5-dicarboxylate (11.4g, 50mmol) was dissolved in tetrahydrofuran (200mL) and the solution treated with triphenylphosphine (14.4g, 55mmol) and 2-isopropoxyethanol (6.36mL, 55mmol). The mixture was cooled on an
ice bath to 0°C and diisopropyl azodicarboxylate (10.8mL, 55mmol) added dropwise over 10 minutes, keeping the temperature between 20°C and 30°C. The reaction mixture was then stirred at room temperature for 30 minutes. The reaction mixture was concentrated in vacuo and the crude product azeotroped with dichloromethane to yield the title product.

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 1.02 (d, 6H), 3.45 (m, 1H), 3.72 (t, 2H), 3.90 (s, 3H), 3.94 (s, 3H), 4.74 (t, 2H). MS ES+ m/z 216 [MH]$^+$

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 9, using the appropriate R$^0$OH alcohol.

Preparation 11 was prepared using 2-(cyclopropylmethoxy)ethanol (FR 2248255, Pg. 2, example 1) as the R^6OH alcohol.

Preparation 12 was prepared using tetrahydro-2H-pyran-4-methanol (DE 4233431, Pg. 4, example 1) as the R^6OH alcohol.

**Preparation 14**

**Dimethyl 1-(2-ethoxyethyl)-4-nitro-1H-pyrazole-3,5-dicarboxylate**

Dimethyl 4-nitro-1H-pyrazole-3,5-dicarboxylate (2.0g, 8.83mmol) was added to a solution of 2-ethoxyethyl bromide (1.18mL, 10.45mmol) and potassium carbonate (1.32g, 9.56mmol) in N,N-dimethylformamide (35mL) and the reaction mixture stirred for 48 hours at room temperature. The reaction mixture was concentrated *in vacuo* and the residue partitioned between ethyl acetate (200mL) and water (100mL). The organic layer was separated, dried over magnesium sulphate and concentrated *in vacuo*. The crude product was purified by column chromatography on silica gel eluting with pentane:ethyl acetate 100:0 to 70:30 to yield the title product, 1.63g.

^1H NMR (CDCl₃, 400MHz) δ: 1.07 (s, 3H), 3.41 (q, 2H), 3.73 (t, 2H), 3.89 (s, 3H), 3.94 (s, 3H), 4.76 (t, 2H). MS APCI+ m/z 302, [MH]^+
Preparation 15

Dimethyl 1-[2-(2-methoxyethoxy)ethyl]-4-nitro-1H-pyrazole-3,5-dicarboxylate

Dimethyl 4-nitro-1H-pyrazole-3,5-dicarboxylate (9.53g, 41.6mmol) and potassium carbonate (3.44g, 25mmol) were dissolved in N,N-dimethylformamide (140mL) under nitrogen. The mixture was then treated with a solution of 1-bromo-2-(2-methoxyethoxy)ethane (9.90g, 54mmol) in N,N-dimethylformamide (10mL). The reaction mixture was stirred at 30°C for 18 hours and then allowed to cool to room temperature. Additional 1-bromo-2-(2-methoxyethoxy)ethane (9.90g, 54mmol) and potassium carbonate (3.44g, 25mmol) were added and the reaction mixture allowed to stir at 30°C for 4 hours. The reaction mixture was concentrated in vacuo and the residue taken up in ethyl acetate (200mL) and water (200mL). The aqueous was separated and washed with ethyl acetate (200mL), the organics were combined and washed with water. The organic layer was dried over magnesium sulphate and concentrated in vacuo to yield the title product.

1H NMR (CDCl₃, 400MHz) δ: 3.25 (s, 3H), 3.38 (m, 2H), 3.50 (m, 2H), 3.80 (t, 2H), 3.92 (s, 3H), 3.93 (s, 3H), 4.77 (t, 2H). MS APCl+ m/z 333 [MH]+

Preparation 16

Dimethyl 1-(2-methoxyethyl)-4-nitro-1H-pyrazole-3,5-dicarboxylate

The title compound was prepared by a method similar to that described for preparation 15 using 1-bromo-2-methoxyethane.
\(^1\)H NMR (CDCl\(_3\), 400MHz) \(\delta\): 3.22 (s, 3H), 3.67 (m, 2H), 3.89 (m, 6H), 4.77 (m, 2H)  
MS ES+ m/z 288 [MH]^+

### Preparation 17

4-Nitro-1-(2-propoxyethyl)-1H-pyrazole-3,5-dicarboxylic acid 3-methyl ester

The ester of preparation 7 (150mg, 0.5mmol) and potassium hydroxide (29mg, 0.55mmol) were dissolved in methanol (2mL) and the reaction mixture stirred at room temperature for 48 hours. The reaction mixture was concentrated in vacuo and the residue taken up in water. The aqueous was washed with ether (x2) and extracted with dichloromethane. The organic phase was then washed with 2M hydrochloric acid (x2) and water (x2), dried over magnesium sulphate and concentrated in vacuo to yield the title product.

\(^1\)H NMR (CD\(_3\)OD, 400MHz) \(\delta\): 0.83 (t, 3H), 1.49 (q, 2H), 3.36 (t, 2H), 3.80 (t, 2H), 3.90 (s, 3H), 4.78 (t, 2H). MS APCI+ m/z 302 [MH]^+

### Preparation 18

4-Nitro-1-(2-ethoxyethyl)-1H-pyrazole-3,5-dicarboxylic acid 3-methyl ester

The ester of preparation 14 (1.63g, 5.4mmol) was added to a solution of potassium hydroxide (330mg, 5.9mmol) in methanol (20mL) and the reaction mixture stirred at room temperature for 18 hours. The reaction mixture was concentrated in vacuo and the crude product dissolved in water and washed with ether. The aqueous phase
was acidified with 2M hydrochloric acid and extracted into dichloromethane (3x100mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo to yield the title product.

\(^1\text{H} \text{NMR (CD}_3\text{OD, 400MHz)} \delta: 1.07 (s, 3H), 3.47 (q, 2H), 3.80 (t, 2H), 3.88 (s, 3H), 4.77 (t, 2H). \text{ MS APCI}^+ m/z 288 [MH]^+\)

**Preparation 19**

1-(2-Isopropoxyethyl)-4-nitro-1H-pyrazole-3,5-dicarboxylic acid 3-methyl ester

![Chemical Structure](image)

The ester of preparation 9 (15.8g, 50mmol) was dissolved in methanol (200mL) and the solution cooled in an ice bath before being treated with potassium hydroxide (2.8g, 50mmol). The reaction mixture was then stirred at room temperature for 18 hours. The reaction mixture was concentrated in vacuo and the residue partitioned between dichloromethane (500mL) and water (250mL). The aqueous phase was separated, acidified with hydrochloric acid and then extracted with dichloromethane (2x500mL). The combined dichloromethane extracts were dried over magnesium sulphate and concentrated in vacuo to yield the title product as a white solid, 11.4g.

\(^1\text{H} \text{NMR (DMSO-}D_6, 400MHz) \delta: 0.92 (d, 6H), 3.45 (m, 1H), 3.67 (t, 2H), 3.82 (s, 3H), 4.66 (t, 2H). \text{ MS ES}^+ m/z 302 [MH]^+\)

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 19 using the appropriate ester of preparations 8, 10, 11, 13, 15 and 16

Preparation 26

4-Nitro-1-((tetrahydropyran-4-ylmethyl)-1H-pyrazole-3,5-dicarboxylic acid 3-methyl ester

The ester of preparation 12 (13.7g, 42mmol) was added to a solution of potassium hydroxide (2.59g, 46.2mmol) in methanol (200mL) and the reaction mixture stirred at room temperature for 18 hours. The reaction mixture was concentrated \textit{in vacuo} and the residue partitioned between dichloromethane (300mL) and water (200mL). The dichloromethane layer was concentrated \textit{in vacuo} and the residue partitioned between ether (200mL) and water (200mL). The aqueous was added to the first aqueous extract, washed with ether (2x200mL) and acidified with hydrochloric acid. The solution was extracted with dichloromethane (3x400mL), dried over magnesium sulphate and concentrated \textit{in vacuo} to yield the title product.

$^1$H NMR (DMSO-$d_6$, 400MHz) δ: 1.24 (m, 2H), 1.36 (m, 2H), 2.10 (m, 1H), 3.20 (m, 2H), 3.78 (m, 2H), 3.84 (s, 3H), 4.43 (d, 2H),

MS APCI+ m/z 314 [MH]+

Preparation 27

Methyl 5-carbamoyl-4-nitro-1-(2-propoxyethyl)-1H-pyrazole-3-carboxylate

The carboxylic acid of preparation 17 (13.2g, 44mmol) was dissolved in dichloromethane (140mL) and the solution treated with N,N-dimethylformamide
(150 μL). The mixture was cooled in an ice bath with acetone to -5°C and oxalyl chloride (11.48 mL, 132 mmol) added dropwise over 30 minutes. The reaction mixture was stirred at -5°C for 1 hour and then allowed to warm to room temperature and stirred for a further 90 minutes. The reaction mixture was concentrated in vacuo and the residue azeotroped with dichloromethane (x2). The crude product was dissolved in tetrahydrofuran and cooled in an ice bath. 0.88 Ammonia (60 mL) was added to the reaction mixture over 10 minutes, the ice bath removed and the reaction mixture stirred for 1 hour until at room temperature. The reaction mixture was concentrated in vacuo and the residue taken up in water. The precipitate formed was filtered off and dried for 18 hours in an oven at 70°C to yield the title product, 10.22 g.

^1^H NMR (DMSO-D$_6$, 400 MHz) δ: 0.81 (t, 3H), 1.45 (q, 2H), 3.32 (t, 2H), 3.74 (t, 2H), 3.90 (s, 3H), 4.40 (t, 2H), 8.33 (s, 1H), 8.48 (s, 1H)

**Preparation 28**

**Methyl 5-carbamoyl-1-(2-methoxyethyl)-4-nitro-1H-pyrazole-3-carboxylate**

The title compound was prepared by a method similar to that described for preparation 27 using the carboxylic acid of preparation 24.

^1^H NMR (DMSO-D$_6$, 400 MHz) δ: 3.18 (s, 3H), 3.65 (m, 2H), 4.82 (s, 3H), 4.38 (m, 2H), 8.33 (m, 1H), 8.47 (m, 1H). MS ES+ m/z 273 [MH]^+
Preparation 29

Methyl 5-carbamoyl-1-(2-ethoxyethyl)-4-nitro-1H-pyrazole-3-carboxylate

Oxalyl chloride (1.2mL, 13.76mmol) and N,N-dimethylformamide (39µL) were added to a solution of the carboxylic acid of preparation 18 (1.33g, 4.63mmol) in dichloromethane (20mL) and the reaction mixture stirred at room temperature for 2 hours. The reaction mixture was concentrated in vacuo and azeotroped from dichloromethane (3x50mL). The product was dissolved in tetrahydrofuran (50mL), cooled in an ice bath, treated with 0.88 ammonia solution (10mL) and stirred for 18 hours at room temperature. The mixture was concentrated in vacuo and the residue partitioned between dichloromethane (200mL) and water (50mL). The organics phase was dried over magnesium sulphate and concentrated in vacuo to yield the title product.

\(^1\)H NMR (DMSO-\(D_6\), 400MHz) \(\delta\): 1.06 (t, 3H), 2.48 (m, 2H), 3.77 (m, 2H), 3.84 (s, 3H), 4.38 (m, 2H), 8.35 (m, 1H), 8.46 (m, 1H). MS APCI+ m/z 287 [MH]+

Preparation 30

Methyl 5-carbamoyl-1-[2-(2-methoxy-ethoxy)-ethyl]-4-nitro-1H-pyrazole-3-carboxylate

The title product was prepared by a method similar to that described for preparation 29 using the carboxylic acid of preparation 21.
\[^1\text{H}\text{NMR (CDCl}_3\text{, 400MHz) }\delta: 3.30\text{ (s, 3H), 3.50 (m, 2H), 3.58 (m, 2H), 3.90 (m, 2H), 3.99 (s, 3H), 4.50 (t, 2H), 6.25 (m, 1H), 7.80 (m, 1H).} \]\text{MS APCI+ m/z 317 [MH]^+}

**Preparation 31**

Methyl 5-carbamoyl-1-(2-cyclopropylmethoxy-ethyl)-4-nitro-1H-pyrazole-3-carboxylate

The title compound was prepared by a method similar to that described for preparation 29 using the carboxylic acid of preparation 23.

\[^1\text{H}\text{NMR (CDCl}_3\text{, 400MHz) }\delta: 0.12\text{ (m, 2H), 0.52 (m, 2H), 0.95 (m, 1H), 3.27 (m, 2H), 3.87 (t, 2H), 3.96 (s, 3H), 4.61 (t, 2H), 6.09 (m, 1H), 7.72 (m, 1H).} \]\text{MS ES+ m/z 335 [MNa]^+}

**Preparation 32**

Methyl 5-carbamoyl-1-(2-isopropanoyl-ethyl)-4-nitro-1H-pyrazole-3-carboxylate

The carboxylic acid of preparation 19 (11.9, 37.8mmol) was dissolved in dichloromethane (140mL) and the solution treated with oxalyl chloride (4.0mL, 45.4mmol) and N,N-dimethylformamide (310μL, 4mmol). The reaction mixture was stirred at room temperature for 18 hours, then concentrated \textit{in vacuo} and the residue azeotroped with dichloromethane (2×100mL). The product was dissolved in
tetrahydrofuran (200mL) and the solution cooled in an ice bath and then treated with 0.88 ammonia (50mL). The reaction mixture was stirred for 15 minutes before being concentrated in vacuo and partitioned between dichloromethane (1000mL) and water (500mL). The aqueous was separated and extracted with dichloromethane (3x300mL), the organics were combined, dried over magnesium sulphate and concentrated in vacuo to yield the title product, 10.4g.

^1H NMR (DMSO-D_6, 400MHz) δ: 0.95 (d, 6H), 3.44 (m, 1H), 3.68 (t, 2H), 3.83 (s, 3H), 4.66 (t, 2H). MS APCI+ m/z 301 [MH]^+

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 32, using the appropriate carboxylic acid of preparations 20 and 22.

Preparation 35

Methyl 5-carbamoyl-4-nitro-1-(tetrahydropyran-4-ylmethyl)-1H-pyrazole-3-carboxylate

5 The carboxylic acid of preparation 26 (11.3g, 36mmol) was dissolved in dichloromethane (150mL) and the solution treated with oxalyl chloride (38mL, 43.2mmol) and N,N-dimethylformamide (280μL, 3.6mmol). The reaction mixture was stirred at room temperature for 18 hours and then concentrated in vacuo. The residue was azeotroped from dichloromethane (2x200mL) and the resulting solid dissolved in tetrahydrofuran and cooled to -30°C. The solution was treated with 0.88 ammonia (3.85mL, 79.2mmol) and stirred at -30°C for 1 hour. The reaction mixture was concentrated in vacuo, diluted with water (100mL) and extracted with ethyl acetate (2x400mL). The combined organics were dried over magnesium sulphate and concentrated in vacuo. The residue was triturated with methanol and ether and dried in vacuo to yield the title product.

1H NMR (DMSO-D₆, 400MHz) δ: 1.20 (m, 2H), 1.40 (m, 2H), 2.10 (m, 1H), 3.22 (m, 2H), 3.81 (m, 2H), 3.86 (s, 3H), 4.19 (d, 2H), 8.37 (m, 1H), 8.53 (m, 1H), MS APCI+ m/z 313 [MH]+
Preparation 36

Methyl 5-carbamoyl-4-nitro-1-(tetrahydrofuran-2-ylmethyl)-1H-pyrazole-3-carboxylate

The title compound was prepared by a method similar to that described for preparation 35 using the carboxylic acid of preparation 25.

$^1$H NMR (DMSO-D$_6$, 400MHz) $\delta$: 1.18 (m, 1H), 1.40 (m, 3H), 1.58 (m, 1H), 1.78 (m, 1H), 3.22 (m, 1H), 3.65 (m, 1H), 3.78 (m, 1H), 3.85 (s, 3H), 4.22 (m, 2H), 8.27 (m, 1H), 8.46 (m, 1H). MS APCI+ m/z 313 [MH]$^+$

Preparation 37

Methyl 4-amino-5-carbamoyl-1-(2-propoxyethyl)-1H-pyrazole-3-carboxylate

The nitro compound of preparation 27 (10g, 33mmol) was dissolved in ethanol (180mL) and the solution treated with palladium(II) hydroxide (933mg, 6.7mmol) and heated to 75°C. Ammonium formate (21g, 330mmol) was added and the reaction mixture was stirred at 75°C for 3 hours. The reaction mixture was filtered through Arbocel® under nitrogen washing through with ethanol. The filtrate was concentrated *in vacuo* to yield the title product as a pale pink solid, 9.1g.

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 0.84 (t, 3H), 1.51 (q, 2H), 3.40 (t, 2H), 3.83 (t, 2H), 3.89 (s, 3H), 4.56 (t, 2H). MS APCI+ m/z 271 [MH]$^+$
Palladium(II) hydroxide (100mg) was added to a solution of the nitro compound of preparation 29 (970mg, 3.39mmol) in methanol (20mL) and the mixture warmed to reflux. Ammonium formate (1.07g, 16.97mmol) was added and the reaction mixture stirred at reflux for 2 hours. The catalyst was removed by filtration through Arbocel® and the reaction mixture concentrated in vacuo to yield the title product.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 1.02 (t, 3H), 3.33 (m, 2H), 3.66 (m, 2H), 4.80 (s, 3H), 4.57 (m, 2H), 5.11 (m, 2H), 7.49 (m, 2H), MS APCI+ m/z 257 [MH]$^+$

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 38 using the appropriate nitro-pyrazoles of preparations 30, 31, 32, 33, 34, 35 and 36.

**Preparation 46**

Methyl 4-amino-5-carbamoyl-1-(2-methoxyethyl)-1H-pyrazole-3-carboxylate

![Chemical Structure](image)
The nitro compound of preparation 28 (1.00g, 3.7mmol) was dissolved in ethyl acetate (15mL) and treated with 10% Pd/C (100mg). The reaction mixture was stirred at room temperature under 15psi of hydrogen for 18 hours. The reaction mixture was filtered through Arbocel®, washing with ethyl acetate and the filtrate concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with pentane:ethyl acetate 50:50 to 34:66 to 0:100 to yield the title product.

\(^1\)H NMR (DMSO-D\(_6\), 400MHz) \(\delta\): 3.16 (s, 3H), 3.60 (m, 2H), 3.76 (s, 3H), 4.45 (m, 2H), 5.07 (m, 2H), 7.42 (m, 2H). MS ES+ m/z 244 [MH]^+

**Preparation 47**

Methyl 5,7-dioxo-1-(2-propoxyethyl)-4,5,6,7-tetrahydropyrazolo[4,3-d]pyrimidine-3-carboxylate

The amide of preparation 37 (9g, 33mmol) and N,N'-carbonyldiimidazole (5.4g, 33mmol) were dissolved in N,N-dimethylformamide (400mL) and the reaction mixture stirred at room temperature for 30 minutes and then at 75°C for 18 hours. Addtional N,N'-carbonyldiimidazole (400mg, 2.69mmol) was added and the reaction mixture stirred for a further 90 minutes. The reaction mixture was concentrated in vacuo and the residue taken up in water and stirred for 30 minutes. The precipitate formed was filtered off to yield the title product as a pale pink solid, 6.05g.

\(^1\)H NMR (DMSO-D\(_6\), 400MHz) \(\delta\): 0.72 (t, 3H), 1.37 (q, 2H), 3.28 (t, 2H), 3.76 (t, 2H), 3.82 (s, 3H), 4.64 (t, 2H), 10.77 (s, 1H), 11.37 (s, 1H). MS APCI- m/z 295, [M-H]^−
Preparation 48

Methyl 1-(2-ethoxyethyl)-5,7-dioxo-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the amide of preparation 38 (570mg, 3.38mmol) in N,N-dimethylformamide (30mL) was treated with N,N'-carbonyldiimidazole (658mg, 4.06mmol) and the reaction mixture stirred at room temperature for 1 hour and then at 90°C for 18 hours. The reaction mixture was concentrated in vacuo and the crude product suspended in acetone and sonicated for 30 minutes. The solid product was filtered off and dried in vacuo to yield the title product.

H NMR (DMSO-D₆, 400MHz) δ: 1.02 (t, 3H), 3.37 (m, 2H), 3.77 (m, 2H), 4.83 (s, 3H), 4.63 (m, 2H), 10.75 (s, 1H), 11.40 (s, 1H). MS ES- m/z 281 [M-H]⁻

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 48, using the appropriate amide of preparations 39, 40, 41, 42, 43 and 46.

\]
The amide of preparation 44 (9.8g, 34.9mmol) was dissolved in acetonitrile (100mL) and the solution treated with N,N'-carbonyldiimidazole (6.8g, 42mmol). The reaction mixture was heated to reflux for 18 hours before being allowed to return to room temperature. The white precipitate formed was removed by filtration, washed with acetonitrile and dried in vacuo to yield the title product.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 1.24 (m, 2H), 1.36 (m, 2H), 2.08 (m, 1H), 3.21 (m, 2H), 3.80 (m, 2H), 3.83 (s, 3H), 4.40 (d, 2H), 10.78 (m, 1H), 11.37 (m, 1H)

MS APCI- m/z 307 [M-H]$

Preparation 56

Methyl 5,7-dioxo-1-(tetrahydropyran-2-ylmethyl)-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The title compound was prepared by a method similar to that described for preparation 55 using the amide of preparation 45.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 1.20 (m, 1H), 1.40 (m, 3H), 1.52 (d, 1H), 1.75 (m, 1H), 3.22 (m, 1H), 3.74 (m, 2H), 3.80 (s, 3H), 4.40 (m, 1H), 4.58 (m, 1H), 10.75 (m, 1H), 11.35 (m, 1H). MS APCI+ m/z 309 [M+H]$^+$

Preparation 57

Methyl 5,7-dichloro-1-(2-propoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
The dione of preparation 47 (3g, 10mmol), phosphorous oxychloride (14.2mL, 152mmol) and tetraethylammonium chloride (3.95g, 30mmol) were dissolved in propionitrile (80mL) and the reaction mixture heated at 115°C for 18 hours. The reaction mixture was concentrated in vacuo and the residue dissolved in additional propionitrile (80mL) and treated with additional phosphorous oxychloride (15mL, 145mmol). The reaction mixture was then heated to 115°C for a further 18 hours. The reaction mixture was concentrated in vacuo and the residue azeotroped with toluene. The crude product was taken up in ethyl acetate and cautiously treated with water. The two layers were separated and the aqueous layer re-extracted with ethyl acetate (x3). The combined organics were washed with brine, dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with pentane:ethyl acetate 75:25 to yield the title product, 3.1g.

$^1$H NMR (DMSO-$d_6$, 400MHz) δ: 0.65 (t, 3H), 1.33 (q, 2H), 3.26 (t, 2H), 3.82 (t, 2H), 3.93 (s, 3H), 4.94 (t, 2H). MS APCI+ m/z 333, [MH]+

Preparation 58

Methyl 5,7-dichloro-1-(2-ethoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

Phosphorous oxychloride (934μL, 10.0mmol) and tetraethylammonium chloride (195mg, 1.50mmol) were added to a solution of the dione of preparation 48 (140mg, 0.50mmol) in propionitrile (5mL) and the reaction mixture refluxed for 18 hours. The reaction mixture was concentrated in vacuo and the crude product partitioned between ethyl acetate (50mL) and water (50mL). The organic layer was dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with pentane:ethyl acetate 100:0 to 75:25 to yield the title product.
'H NMR (CDCl₃, 400MHz) δ: 1.05 (t, 3H), 3.41 (m, 2H), 3.84 (m, 2H), 4.06 (s, 3H), 5.00 (m, 2H). MS APCI+ m/z 319 [MH]+

Preparation 59

Methyl 5,7-dichloro-1-(2-isoproxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dione of preparation 49 (2.37g, 8.00mmol) was suspended in acetonitrile (30mL) and the solution treated with phosphorous oxychloride (15mL, 160mmol) and tetraethyl ammonium chloride (3.97g, 24mmol). The reaction mixture was stirred at reflux for 18 hours. The reaction mixture was allowed to cool and then concentrated in vacuo before being partitioned between dichloromethane (300mL) and water (200mL). The dichloromethane layer was separated, dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with pentane:ethyl acetate 100:0 to 75:25 to yield the title product as a white solid, 1.54g.

'H NMR (CDCl₃, 400MHz) δ 0.96 (d, 6H), 3.43 (m, 1H), 3.86 (t, 2H), 4.08 (s, 3H), 4.96 (t, 2H). MS ES+ m/z 355 [MNa]+

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 59 using the appropriate dione of preparations 50, 51, 52, 54, 55 and 56.

Preparation 66

Methyl 5,7-dichloro-1-(2-(cyclopropylmethoxy)ethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dione of preparation 53 (2.52g, 8.17mmol) was suspended in acetonitrile (40mL) and the suspension treated with phosphorous oxychloride (15mL, 163.4mmol) and tetraethylammonium chloride (4.08g, 24.51mmol). The reaction mixture was heated at reflux for 24 hours. The reaction mixture was concentrated in vacuo and the residue triturated with ether. The filtrate was concentrated in vacuo and purified by column chromatography on silica gel eluting with dichloromethane:ethyl acetate 50:50 to yield the title product as a colourless oil, 907mg.

\(^1\)H NMR (CDCl\(_3\), 400MHz) \(\delta\): 0.03 (m, 2H), 0.40 (m, 2H), 0.82 (m, 1H), 3.18 (d, 2H), 3.92 (t, 2H), 4.07 (s, 3H), 4.99 (t, 2H). MS ES+ m/z 345 [MH]^+

Preparation 67

Methyl 5-chloro-7-(4-methylpyridin-2-ylamino)-1-(2-propoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dichloro compound of preparation 57 (400mg, 1.2mmol) and 2-amino-4-methylpyridine (649mg, 6.0mmol) were dissolved in dimethyl sulphoxide (5mL) and the reaction mixture stirred at 30°C for 1 hour. The reaction mixture was partitioned
between dichloromethane and water and the aqueous layer extracted with
dichloromethane (x2). The combined organics were washed with water (x2),
aqueous citric acid and brine before being dried over magnesium sulphate and
concentrated in vacuo to yield the title product as a yellow solid, 800mg.

- Preparation 73 used tetrahydropyran-4-ylamine (WO 98/08855, Pg. 17, e.g. 3) as the HNR'R\text{\textsuperscript{2}} amine
- Preparation 75 used 6-methoxy-pyridin-2-ylamine (US 01/0047013, pg. 3, example 2) as the HNR'R\text{\textsuperscript{2}} amine
- Preparation 83 used (3R)-tetrahydrofuran-3-ylamine tosylate as the HNR'R\text{\textsuperscript{2}} amine with 1eq of N-ethyldiisopropylamine.
Preparation 86

Methyl 5-chloro-1-(3-methoxybutyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dichloro compound of preparation 60 (700mg, 2.11mmol) and 4-methylpyridin-2-ylamine (1.14g, 10.54mmol) were dissolved in dimethyl sulphoxide (10mL) and the reaction mixture heated to 30°C under nitrogen for 3 hours. The reaction mixture was concentrated *in vacuo* and the residue taken up in dichloromethane (100mL) and water (150mL). The layers were separated and the aqueous layer washed with dichloromethane (50mL). The organics were combined, washed with water (100mL) and citric acid (50mL) solution, dried over magnesium sulphate and concentrated *in vacuo*.

The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 99:1 to yield the title product as a yellow solid, 330mg.

\[ ^1H \text{NMR (CD}_2\text{OD, 400MHz)} \delta: 1.20 \text{ (m, 3H), 2.10 \text{ (m, 2H), 2.45 \text{ (s, 3H), 3.30 \text{ (s, 3H), 3.40 \text{ (m, 1H), 3.98 \text{ (s, 3H), 5.00 \text{ (m, 2H), 6.90 \text{ (m, 1H), 7.30 \text{ (m, 1H), 8.00 \text{ (m, 1H)})}}}} } \]

MS ES+ m/z 405 [MH]+

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 86 using the appropriate HNR'R² amine and dichloro compound of preparations 58, 59, 62, 64 and 65.

- Preparation 95 was prepared using 2-amino-4,5-dimethylpyridine (J. Het. Chem., 1981, 18 (8), 1613-1618, page 1616 as the HNR'R' amine.

Preparation 102

Methyl 5-chloro-1-(2-(cyclopropylmethoxy)ethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dichloro compound of preparation 66 (900mg, 2.61mmol) was dissolved in dimethyl sulphoxide (10mL) and the solution treated with 4-methylpyridin-2-ylamine (1.13g, 10.46mmol). The reaction mixture was then stirred at 35°C in an oil bath for 1 hour. The reaction mixture was allowed to cool and treated with water to induce precipitation of a solid. The crude product was filtered off and dried in vacuo at 50°C for 18 hours. The mother liquors were extracted with dichloromethane (2x50mL) and then concentrated in vacuo. The combined solids were purified by column
chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 98:2.
The crude product was then re-purified by column chromatography on silica gel
eluting with dichloromethane:ethyl acetate 70:30 to yield the title product, 160mg.
$^1$H NMR (CDCl$_3$, 400MHz) δ: 0.05 (d, 2H), 0.27 (m, 2H), 0.92 (m, 1H), 2.48 (s, 3H),
3.38 (d, 2H), 4.02 (m, 2H), 4.03 (s, 3H), 5.08 (m, 2H), 6.80 (m, 1H), 7.00 (m, 1H),
7.80 (m, 1H), 8.18 (m, 1H). MS ES+ m/z 439 [MNa]$^+$

Preparation 103
Methyl 5-chloro-7-(cyclohexyl)amino-1-(2-ethoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The dichloro compound of preparation 58 (2.50g, 7.84mmol) was dissolved in
tetrahydrofuran (10mL) and the solution treated dropwise with a solution of
cyclohexylamine (4.48mL, 39.20mmol) whilst being cooled on an ice bath. The reaction mixture was stirred for 15 minutes at room temperature. The reaction mixture was diluted with water (50mL) and ethyl acetate (50mL) and the reaction mixture stirred for 1 hour. The solid present was collected by filtration, washed with water and dried in vacuo. The ethyl acetate layer was separated and washed with water, dried over magnesium sulphate and concentrated in vacuo. The residue was triturated with ether to yield further solid. A total of 2.25g of the desired product was collected.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 1.18 (t, 3H), 1.27 (m, 2H), 1.47 (m, 2H), 1.53-1.75 (m, 2H), 1.78 (m, 2H), 2.12 (m, 2H), 3.76 (q, 2H), 3.92 (t, 2H), 4.00 (s, 3H), 4.12 (m, 1H), 4.70 (t, 2H), 7.20 (d, 1H). MS ES+ m/z 382 [MH]$^+$
Preparations 104 to 117

The appropriate monochloro compound (1eq), the appropriate HNR³R⁴ amine (3-5eq), N-ethylidisopropylamine (5eq) and tetraethylammonium fluoride hydrate (1eq) were dissolved in 1-methyl-2-pyrrolidinone (5.3mL.mmol⁻¹) and the reaction vessel sealed and heated in a microwave oven for 45 minutes. The reaction mixture was allowed cool to room temperature before being partitioned between ethyl acetate (50mL) and water (50mL). The organic layer was washed with water (25mL), dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:ethyl acetate 50:50 to yield the desired product.

The monochloro compounds of preparations 73, 74, 75, 76, 77, 81, 86, 87, 88, 92, 97 and 102 were used.

Preparation 118

**Methyl 5-((N-isopropyl-N-methylamino)-1-[2-(2-methoxyethoxy)ethoxy]-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate**

The monochloro compound of preparation 85 (150mg, 0.36mmol), N-ethyldiisopropylamine (186μL, 1.07mmol) and N-methyl-isopropylamine (50μL,
0.43mmol) were dissolved in dimethyl sulphoxide (1.5mL) and the reaction mixture stirred at 120°C for 18 hours. Additional N-methyl-isopropylamine (62μL, 0.36mmol) was added and the reaction stirred at 120°C for a further 4 hours. The reaction mixture was concentrated \textit{in vacuo} and the residue taken up in a mixture of dichloromethane (50mL) and water (100mL). The two layers were separated and the aqueous layer washed with dichloromethane (50mL). The organics were combined and washed with water (2x50mL) before being dried over magnesium sulphate and concentrated \textit{in vacuo}. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 95:5 to yield the title product as a yellow oil, 65mg.

$^1$H NMR (CD$_3$OD, 400MHz) δ: 1.25 (d, 6H), 2.39 (s, 3H), 2.93 (m, 3H), 3.05 (s, 3H), 3.45 (t, 2H), 3.62 (m, 2H), 3.95 (s, 3H), 4.00 (t, 2H), 4.78 (m, 2H), 5.10 (m, 1H), 6.90 (m, 1H), 8.15 (d, 1H), 8.25 (m, 1H). MS APCI+ m/z 458 [MH]$^+$

**Preparation 119**

Methyl 5-((dimethylamino)-1-(2-ethoxyethyl)-7-(6-ethylpyridin-2-ylamo)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the monochloro compound of preparation 94 (200mg, 0.50mmol) and N-ethylidiisopropylamine (172μL, 0.99mmol) in dimethyl sulphoxide (2mL) was treated with a 5.6M solution of dimethylamine in ethanol (180μL, 1.0mmol) and the reaction mixture stirred at 120°C for 18 hours. The reaction mixture was concentrated \textit{in vacuo} and the residue taken up in ether (100mL) and washed with water (50mL). The aqueous was extracted with ether (25mL) and the combined organics washed with water (2x100mL) and brine (50mL), dried over magnesium sulphate and concentrated \textit{in vacuo}. The residue was purified by column
chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 95:5. The crude product was recrystallised from ethanol to yield the title product.

¹H NMR (CDCl₃, 400MHz) δ: 1.30 (m, 6H), 2.76 (q, 2H), 3.30 (s, 6H), 3.70 (q, 2H), 4.01 (m, 2H), 4.02 (s, 3H), 4.80 (t, 2H), 6.83 (d, 1H), 7.60 (t, 1H), 8.10 (d, 1H), 9.80 (s, 1H). MS APCI- m/z 412 [M-H]⁻

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 119 using the appropriate HNR³R⁴ amine and monochloro compound of preparations 72, 78, 79, 80, 92, 94, 96, 97, 98, 99, 100 and 101.

Preparation 134

Methyl 1-(2-(cyclopropylmethoxy)ethyl)-5-(N-ethyl-N-methyl-amino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the chloro compound of preparation 102 (40mg, 0.096mmol) and N-ethyldiisopropylamine (83μL, 0.48mmol) in dimethyl sulphoxide (2mL) was treated with N-methylethylamine (41μL, 0.48mmol) and the reaction mixture stirred at 120°C for 18 hours. The reaction mixture was allowed to cool and partitioned between water (25mL) and ethyl acetate (25mL). The organic layer was washed with water (25mL), dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with ethyl acetate to yield the title product.

1H NMR (CD3OD, 400MHz) δ: 0.02 (m, 2H), 0.23 (m, 2H), 0.95 (m, 1H), 1.24 (t, 3H), 2.37 (s, 3H), 3.21 (s, 3H), 3.35 (d, 2H), 3.76 (m, 2H), 3.95 (s, 3H), 3.98 (t, 2H), 4.79 (m, 2H), 6.94 (m, 1H), 8.13 (d, 1H), 8.32 (s, 1H). MS ES+ m/z 462 [MNa]+

Preparation 135

5-Chloro-7-(4-methylpyridin-2-ylamino)-1-(2-propoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The ester of preparation 67 (500mg, 1.24mmol) was dissolved in dioxan (5mL) and the solution treated with a 1M aqueous solution of sodium hydroxide (6.20mL,
6.2 mmol). The reaction mixture was then stirred for 18 hours at room temperature. The reaction mixture was treated with 1 M citric acid solution (10 mL) and a yellow precipitate formed. The mixture was stirred for 15 minutes before being filtered and the solid product dried in vacuo to yield the title product, 360 mg.

$^1$H NMR (CDCl$_3$, 400 MHz) $\delta$: 0.73 (t, 3H), 1.52 (m, 2H), 2.51 (s, 3H), 3.51 (t, 2H), 4.01 (t, 2H), 5.05 (m, 2H), 6.98 (m, 1H), 7.24 (m, 1H), 8.14 (m, 1H). MS APCI+ m/z 391 [MH$^+$]

The following compounds were prepared by a method similar to that described for preparation 135 using the appropriate ester of preparations 68, 69, 70, 71, 72, 80, 82, 83, 84, 87, 88, 89, 90, 91, 92, 93 and 103

Preparation 153

[5,7-Dichloro-1-(2-hydroxyethyl)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]methanol

The dichloro compound of preparation 58 (2.4g, 7.52mmol) was dissolved in tetrahydrofuran (60mL) and the solution cooled to -78°C. Diisobutylaluminium hydride (37.6mL, 37.6mmol) in tetrahydrofuran (20mL) was added dropwise over 10 minutes and the reaction mixture stirred at -78°C for 10 minutes and then at -10°C for 1 hour. The reaction mixture was cooled to -78°C, quenched with ammonium chloride solution (25mL) and allowed to return to room temperature. The reaction mixture was diluted with dichloromethane (200mL) and water (100mL) and the solution filtered through Arbocel®, washing through with dichloromethane (3x100mL). The organic phase was separated, dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography.
on silica gel eluting with dichloromethane:methanol 99:1 to yield the title product, 1.67g.

\(^1\)HNMR (CDCl\(_3\), 400MHz) \(\delta\): 1.08 (t, 3H), 3.42 (m, 2H), 3.80 (m, 2H), 4.90 (m, 2H), 5.10 (s, 2H). MS APCI+ m/z 291 [MH]^+

**Preparation 154**

3-\((t-\text{Butyldimethylsilyloxy)methyl}\)-5,7-dichloro-1-(2-ethoxyethyl)-1\(H\)-pyrazolo[4,3-\(d\)]pyrimidine

The alcohol of preparation 153 (1.32g, 4.53mmol) was dissolved in dichloromethane (25mL) and the solution treated with imidazole (339mg, 4.98mmol) and then \(t-\text{butyldimethylsilyl}\) chloride (750mg, 4.98mmol). The reaction mixture was then stirred at room temperature for 18 hours. The reaction mixture was diluted with dichloromethane (200mL) and washed with 10% potassium carbonate solution (100mL). The organic phase was dried over sodium sulphate and concentrated *in vacuo*. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 99:1 to yield the title product, 1.56g.

\(^1\)HNMR (CDCl\(_3\), 400MHz) \(\delta\): 0.00 (s, 6H), 0.78 (s, 9H), 0.93 (t, 3H), 3.29 (m, 2H), 3.71 (t, 2H), 4.72 (m, 2H), 4.94 (s, 2H). MS APCI+ m/z 405 [MH]^+
Preparation 155

\[ \text{N-[3-(tert-Butyldimethylsilyloxyethyl)-5-chloro-1-(2-ethoxyethyl)-1H-pyrazolo[4,3-d]pyrimidin-7-yl]pyrimidin-4-ylamine} \]

Pyrimidin-4-ylamine (1.10g, 11.55mmol) was dissolved in tetrahydrofuran (30mL) and the solution treated with sodium hexamethyldisilazide (2.12g, 11.55mmol) and stirred at room temperature for 20 minutes. The solution was then treated with a solution of the dichloro compound of preparation 154 (1.56g, 3.85mmol) in tetrahydrofuran (10mL) and the reaction mixture stirred for 90 minutes at room temperature. The reaction mixture was quenched with ammonium chloride solution (100mL) and extracted with dichloromethane (200mL). The organic phase was separated, dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 97:3 to yield the title product, 830mg.

\[ ^1\text{HNMNR (CDCl}_3, \text{400MHz)}: 0.00 (s, 6H), 0.77 (s, 9H), 1.08 (t, 3H), 3.54 (m, 4H), 4.63 (m, 2H), 4.90 (s, 2H), 8.33 (d, 1H), 8.51 (d, 1H), 8.77 (s, 1H) \]

MS APCI+ m/z 464 [MH]+

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 155 using the appropriate HNR¹R² amine.

- Preparation 157 used the amine of preparation 6 as the HNR¹R² amine.
- Preparation 158 used 2-methylpyrimidin-4-ylamine (J. Het. Chem, 1987, 24, 1377-1380) as the HNR¹R² amine.
Preparation 160

[5-Chloro-1-(2-ethoxyethyl)-7-(pyrimidin-4-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]methanol

The protected alcohol of preparation 155 (815mg, 1.76mmol) was dissolved in tetrahydrofuran (40mL) and the solution treated with a 1M solution of tetrabutylammonium fluoride in tetrahydrofuran (8.63mL, 8.63mmol). The reaction mixture was stirred for 90 minutes at room temperature and was then treated with additional tetrabutylammonium fluoride solution (4.32mL) and stirred for another hour. The reaction mixture was diluted with water (50mL) and the aqueous extracted with ethyl acetate (3x50mL). The combined organics were dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 99:1 to 95:5 to yield the title product, 1.25g.

### Preparation 165

**5-Chloro-1-(2-ethoxyethyl)-7-(pyrazin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbaldehyde**

![Pyrazole Structure](image)

The alcohol of preparation 161 (251mg, 0.72mmol) was dissolved in dichloromethane (12mL) and the solution cooled to 0°C in an ice bath. 1,1,1-Triacetoxy-1,1-dihydro-1,2-benziodoxol-3 (1H)-one (Dess-Martin periodinane, 456mg, 1.08mmol) was added and the reaction mixture stirred at room temperature for 2 hours. The reaction mixture was treated with a saturated solution of sodium thiosulphate in water (7.8mL) and then with saturated sodium hydrogencarbonate...
solution (7.8mL) and ether (7.8mL). The mixture was stirred at room temperature for 15 minutes, the organic phase separated and the aqueous extracted with dichloromethane (x3). The organics were combined, dried over sodium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 99:1 to yield the title product, 200mg.

^1^HNMR (CDCl3, 400MHz) δ: 1.22 (t, 3H), 3.69 (m, 2H), 4.06 (m, 2H), 4.92 (m, 2H), 7.22 (m, 1H), 8.32 (m, 1H), 8.40 (m, 1H), 9.77 (m, 1H), 10.35 (m, 1H)

The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 165 using the appropriate alcohol of preparations 160, 162, 163, 164.

Preparation 170

5-Chloro-1-(2-ethoxyethyl)-7-(pyrimidin-4-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The aldehyde of preparation 166 (220mg, 0.63mmol) was dissolved in tert-butanol (40mL) and the solution treated with a 2M solution of 2-methylbut-2-ene in tetrahydrofuran (44mL). The solution was stirred at room temperature and then treated dropwise with a solution of sodium chlorite (683mg, 7.59mmol) and sodium dihydrogen orthophosphate (699mg, 5.82mmol) in water (8mL) over 5 minutes. The reaction mixture was stirred at room temperature for 30 minutes. Water (40mL) and dichloromethane (40mL) were added to the reaction mixture and the phases separated. The aqueous layer was extracted with dichloromethane (2x40mL) and the aqueous was then acidified to pH 3 and extracted once more with dichloromethane (2x40mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo. The crude product was purified by column chromatography on silica gel eluting with first dichloromethane:methanol 97:3 and then dichloromethane:methanol:acetic acid 85:15:1 to yield the title product, 194mg.

$^1$H NMR (CD$_3$OD, 400MHz) δ: 1.20 (t, 3H), 3.68 (m, 2H), 4.01 (t, 2H), 4.92 (t, 2H), 8.42 (m, 1H), 8.68 (m, 1H), 8.87 (m, 1H). MS APCI+ m/z 364 [MH]$^+$
The following compounds, of the general formula shown below, were prepared by a method similar to that described for preparation 170 using the appropriate aldehyde of preparations 165, 167, 168, 169.

Preparation 175

Ethyl 5-chloro-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

5 The carboxylic acid of preparation 137 (565mg, 1.5mmol) was suspended in 1-methyl-2-pyrrolidinone (5mL) and the solution treated with N-ethylidissopropylamine (313μL, 1.8mmol) and N,N'-carbonyldimidazole (364mg, 2.25mmol) and stirred for 30 minutes at room temperature. The solution was treated with sodium ethoxide (408mg, 6.0mmol) and the reaction mixture stirred for a further 30 minutes at room temperature. The reaction mixture was quenched with citric acid solution (5mL) and concentrated in vacuo. The residue was partitioned between dichloromethane (100mL) and water (50mL) and the organic phase separated, dried over magnesium sulphate and concentrated in vacuo. The residue was triturated with ethyl acetate (10mL) and dried in vacuo to yield the title product.

15 "H NMR (DMSO-D₆, 400MHz) δ: 0.96 (t, 3H), 1.32 (t, 3H), 2.40 (s, 3H), 3.44 (q, 2H), 3.86 (t, 2H), 4.36 (q, 2H), 4.93 (t, 2H), 7.06 (m, 1H), 7.87 (s, 1H), 8.23 (d, 1H), MS APCI+ m/z 405 [MH]+
Preparation 176

2-(Dimethylamino)ethyl 5-chloro-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The carboxylic acid of preparation 137 (282mg, 0.75mmol) was suspended in 1-methyl-2-pyrrolidinone (2.5mL) and the solution treated with N-ethyl-diisopropylamine (157µL, 0.9mmol) and N,N'-carbonyldiimidazole (182mg, 1.13mmol) and stirred at room temperature for 30 minutes. The solution was treated with 2-(dimethylamino)ethanol (309µL, 3.0mmol) and 4-(N,N-dimethylamino)pyridine (12mg, 0.1mmol) and the reaction mixture heated to 50°C for 18 hours. The reaction mixture was concentrated in vacuo and the residue purified by column chromatography on silica gel eluting with dichloromethane:methanol:0.88 ammonia 100:0:0 to 90:10:1 to yield the title product, 170mg.

¹H NMR (CD₂OD, 400MHz) δ: 1.08 (t, 3H), 2.40 (s, 6H), 2.45 (s, 3H), 2.84 (t, 2H), 3.60 (m, 2H), 3.98 (t, 2H), 4.57 (t, 2H), 5.01 (m, 2H), 6.98 (d, 1H), 8.12 (m, 1H).

Preparation 177

5-Chloro-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

The carboxylic acid of preparation 137 (376mg, 1.0mmol) was added to a solution of N-[(dimethylamino)-1H-1,2,3-triazolo-[4,5-b]pyridin-1-yl-methylene]-N-methylmethanaminium hexafluorophosphate N-oxide (HATU, 380mg, 1.0mmol) and N-ethylisopropylamine (1mL, 5.6mmol) in N,N-dimethylformamide (15mL). The mixture was then treated with a saturated solution of ammonia in tetrahydrofuran (600µL) and the reaction mixture stirred at room temperature for 48 hours. The reaction mixture was concentrated in vacuo and the residue partitioned between ethyl acetate (50mL) and water (50mL). The aqueous was extracted with ethyl acetate (2x50mL) and dichloromethane (50mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 95:5 to yield the title product.

$^1$H NMR (CDCl₃, 400MHz) δ: 1.17 (t, 3H), 2.47 (s, 3H), 3.68 (m, 2H), 4.01 (t, 2H), 4.92 (m, 2H), 6.94 (m, 1H), 8.08 (m, 1H), 8.22 (m, 1H). MS APCI+ m/z 376 [MH]^+
Preparation 178

5-Chloro-1-(2-ethoxyethyl)-7-(4-fluoro-3-methylphenylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

The title compound was prepared by a method similar to that described for preparation 177 using the carboxylic acid of preparation 152.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 0.96 (t, 3H), 2.26 (s, 3H), 3.45 (q, 2H), 3.82 (m, 2H), 4.93 (m, 2H), 7.23 (t, 1H), 7.50 (m, 2H), 7.64 (s, 1H), 7.81 (s, 1H), 9.37 (s, 1H)

MS APCI+ m/z 393 [MH]$^+$

Preparation 179

5-Chloro-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonitrile

The amide of preparation 177 (140mg, 0.37mmol) was dissolved in a solution of trifluoroacetic anhydride (53µL, 0.37mmol) and pyridine (59mg, 0.75mmol) in tetrahydrofuran (5mL) and the reaction mixture stirred at room temperature for 18 hours. The reaction mixture was concentrated in vacuo and the residue purified by column chromatography on silica gel eluting with dichloromethane to yield the title product.

\textbf{Preparation 186}

\textit{N}-[5-Chloro-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-\textit{d}]pyrimidine-3-carbonyl]methanesulfonamide

\begin{center}
\includegraphics[width=0.5\textwidth]{chemical_structure.png}
\end{center}

The carboxylic acid of preparation 137 (1.0g, 2.70mmol), methanesulphonamide (330mg, 3.5mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (660mg, 3.5mmol) and 4-dimethylaminopyridine (390mg, 3.5mmol) were dissolved in N,N-dimethylformamide (10mL) and the reaction mixture stirred at room temperature for 60 hours. Additional methanesulphonamide (165mg, 1.7mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (330 1.7mmol) and 4-dimethylaminopyridine (195 1.7mmol) were added and the reaction mixture stirred for a further 20 hours. Further methanesulphonamide (165 1.7mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (330 1.7mmol) and 4-dimethylaminopyridine (195 1.7mmol) were added and the reaction mixture stirred for a final 18 hours. The reaction mixture was concentrated \textit{in vacuo} and the residue partitioned between dichloromethane (25mL) and water (25mL). The organic phase was separated, washed with water (2x25mL), dried over magnesium sulphate and concentrated \textit{in vacuo}. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol:acetic acid 100:0:0 to 96:3.5:0.5. The
crude product was triturated in warm ethyl acetate (10mL) to yield the title product, 290mg.

MS ES- m/z 452 [M-H]

Preparation 187

3-(Methoxycarbonyl)-1-[(2S)-2-methoxypropyl]-4-nitro-1H-pyrazole-5-carboxylic acid

Diisopropyl azodicarboxylate (14.9mL, 76mmol) was added dropwise to a solution of dimethyl 4-nitropyrazole-3,5-dicarboxylate (15.73g, 69mmol), (S)-(+-)-2-methoxypropanol (6.81g, 76mmol) and triphenylphosphine (19.9g, 76mmol) in tetrahydrofuran (220mL) with stirring under nitrogen, keeping the reaction temperature between 0°C and 10°C by cooling in an ice bath. Once addition was complete the reaction was allowed to stir at room temperature for 18 hours. The reaction mixture was concentrated under reduced pressure and the residual oil re-dissolved in methanol (200mL). Potassium hydroxide (3.88g, 69mmol) was added and the reaction was allowed to stir at room temperature for 18 hours. The mixture was concentrated under reduced pressure and the residue suspended in water (50mL), and washed with dichloromethane (2x100mL). The aqueous solution was acidified to pH 1 using concentrated hydrochloric acid, and then extracted with dichloromethane (3x100mL). The combined organic extracts from extraction of the acidic solution were evaporated to dryness, then taken up in saturated aqueous sodium bicarbonate solution (100mL). The aqueous solution was washed sequentially with dichloromethane (100mL), and ethyl acetate (2x100mL), then acidified to pH1 with concentrated hydrochloric acid and extracted with ethyl acetate.
(3x100ml). The combined organic extracts from extraction of the acidic solution were dried over magnesium sulphate and concentrated under reduced pressure to afford the title compound as a yellow oil.

\[ ^{1}H \text{ NMR (DMSO-D}_6, 400MHz) \delta: 1.05 (d, 3H), 3.10 (s, 3H), 3.70 (m, 1H), 3.85 (d, 3H), 4.45-4.70 (m, 2H). \]

MS APCI+ m/z 288 [MH]^+

**Preparation 188**

2-(Cyclobutyloxy)ethanol

Butyl lithium (2.5M in hexanes, 61mL, 0.152mol) was added dropwise to an ice-cold solution of cyclobutanol (10g, 0.139mol) in tetrahydrofuran (250mL) so as to maintain the reaction temperature below 10°C. The mixture was then stirred for a further 2 hours at 5-10°C, and a solution of 1,3,2-dioxathiolane 2,2-dioxide (18.90g, 0.152mol) in tetrahydrofuran (50mL) was added dropwise so as to maintain the reaction temperature below 15°C. Once addition was complete the reaction was stirred for a further 3 hours at room temperature, water (3mL) followed by concentrated sulphuric acid (7.5mL) then added and the reaction stirred for an additional 18 hours. The reaction was carefully neutralised by the addition of solid sodium carbonate and sodium bicarbonate, and the mixture concentrated under reduced pressure at room temperature. The residue was diluted with water, saturated with sodium chloride added until saturation was achieved and the solution then extracted with ethyl acetate (4x100mL). The combined organic extracts were dried over magnesium sulphate and evaporated under reduced pressure at room temperature. The residual orange oil was purified by Kugelrohr distillation to afford the title compound, 7.7g. bp 70-80°C at 10mmHg.

\[ ^{1}H \text{ NMR (CDCl}_3, 400 MHz) \delta: 1.38-1.57 (m, 1H), 1.63 (m, 1H), 1.80-1.98 (m, 2H), 2.06-2.15 (m, 2H), 3.40 (t, 2H), 3.65 (t, 2H), 3.95 (m, 1H). \]

**Preparation 189**
1-[2-(Cyclobutylxoxy)ethyl]-3-(methoxycarbonyl)-4-nitro-1H-pyrazole-5-carboxylic acid

The title compound was obtained as a white solid from the alcohol from preparation 188 and dimethyl 4-nitropyrazole-3,5-dicarboxylate following a similar procedure to that described in preparation 187.

1H NMR (CDCl₃, 400MHz) δ: 1.38-1.50 (m, 1H), 1.62 (m, 1H), 1.70-1.81 (m, 2H), 2.10 (m, 2H), 3.76 (m, 2H), 3.90 (m, 4H), 4.78 (t, 2H), 9.68 (br s, 1H).

MS ES+ m/z 331 [MNH⁺]

Preparation 190

2-(2,2-Difluoroethoxy)ethanol

Tetra-butyl ammonium bromide (1.96g, 6.08mmol) was added portionwise to a solution of 2,2-difluoroethanol (25g, 304.9mmol) in triethylamine (45mL, 322.9mmol) and the mixture stirred for 5 minutes. Ethylene carbonate (29.53g, 335.3mmol) was added and the reaction mixture was heated at 100°C for 18 hours. The cooled mixture was then distilled under reduced pressure, and the distillate containing the desired product was redistilled at atmospheric pressure to provide the title compound as a yellow liquid, 4.95g (b.p.127-128°C).

¹H NMR (CDCl₃, 400MHz) δ: 2.04 (br s, 1H), 3.65 (m, 2H), 3.72 (m, 4H), 5.70-6.02 (m, 1H).

Preparation 191
1-(2-(2,2-Difluoroethoxy)ethyl)-3-(methoxycarbonyl)-4-nitro-1H-pyrazole-5-carboxylic acid

The title compound was obtained as a white solid, from the alcohol from preparation 190 and dimethyl 4-nitropyrazole-3,5-dicarboxylate, using a similar procedure to that described in preparation 187.

\(^1\)H NMR (CDCl\(_3\), 400MHz) \(\delta\): 3.61 (m, 2H), 3.92 (m, 5H), 4.80 (t, 2H), 5.60-5.88 (m, 1H).

MS ES+ \(m/z\) 324 [MH]+

Preparation 192

3-(Methoxycarbonyl)-4-nitro-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazole-5-carboxylic acid

A solution of diisopropyl azodicarboxylate (71.9mL, 366mmol) in tetrahydrofuran (80mL) was added dropwise to a solution of dimethyl 4-nitropyrazole-3,5-dicarboxylate (60g, 260mmol), 2,2,2-trifluoroethoxyethanol (Journal of Fluorine Chemistry (1992), 59(3), 387-96), (45.2g, 314mmol) and triphenylphosphine (96.15g, 366mmol) in tetrahydrofuran (650mL) with stirring under nitrogen, maintaining the reaction temperature between 0°C and 10°C by cooling in an ice
bath. After the addition was complete, the mixture was allowed to warm to room
temperature and stirred for 2 days. The solvent was removed under reduced
pressure and the residue was dissolved in methanol (800mL) and cooled to 0°C. A
solution of potassium hydroxide (16.16g, 288mmol) in methanol (200mL) was added
at 0°C and the reaction was allowed to warm to room temperature and stirred for 16
hours. The solvent was removed under reduced pressure and the residue was
partitioned between water (600mL) and ethyl acetate (600mL). The aqueous layer
was washed with ethyl acetate (2 × 200mL) and the aqueous phase then acidified
with hydrochloric acid to pH1. The aqueous solution was extracted with ethyl
acetate (3 × 400mL), the combined extracts were dried over sodium sulphate and
concentrated under reduced pressure to afford a colourless solid (52.86g, 59%).
The product was a mixture of 3-methoxycarbonyl-4-nitro-1-(2,2,2-
trifluoroethoxy)ethylpyrazole-5-carboxylic acid (major) and 5-methoxycarbonyl-4-
nitro-1-(2,2,2-trifluoroethoxy)ethylpyrazole-3-carboxylic acid (minor) and was used
directly for the next step.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 3.77 (q, 2H), 3.93 (s, 3H), 4.00 (t, 2H), 4.84 (t, 2H).

**Preparation 193**

2-(3,3,3-Trifluoropropoxy)ethanol

![Structural formula of 2-(3,3,3-Trifluoropropoxy)ethanol]

n-Butyl lithium (39mL, 2.5M in hexanes, 97.5mmol) was added dropwise to an ice-
cooled solution of 3,3,3-trifluoropropan-1-ol (10g, 87.7mmol) in tetrahydrofuran
(130mL), so as to maintain the temperature below 5°C, and once addition was
complete the reaction was stirred for a further hour at 0°C.

A solution of 1,3,2-dioxathiolane 2,2-dioxide (11.97g, 96.5mmol) in tetrahydrofuran
(35mL) was then added dropwise so as to maintain the internal temperature below
5°C, and once addition was complete the reaction was stirred at room temperature
for 18 hours. Water (2mL) followed by concentrated sulphuric acid (5mL) were
added and the reaction stirred for a further 6 hours at room temperature. The
mixture was neutralised by the addition of sodium carbonate, then diluted with water (20mL) and the resulting solid filtered off and washed with ethyl acetate. The filtrate was concentrated under reduced pressure and the residue suspended in brine and extracted with ethyl acetate (3x). The combined organic extracts were dried over magnesium sulphate and evaporated under reduced pressure. The residual gum was distilled under high vacuum to afford the title compound as a colourless liquid, 6.75g (b.p.57-80°C).

\(^1\)H NMR (CDCl\(_3\), 400 MHz) \( \delta \): 2.38 (m, 2H), 2.57 (m, 2H), 3.69 (m, 4H).

**Preparation 194**

3-(Methoxycarbonyl)-4-nitro-1-[2-(3,3,3-trifluoropropoxy)ethyl]-1H-pyrazole-5-carboxylic acid

The title compound was obtained as a white solid, from the alcohol from preparation 193 and dimethyl 4-nitropyrazole-3,5-dicarboxylate, following the procedure described in preparation 187.

\(^1\)H NMR (CDCl\(_3\), 400 MHz) \( \delta \): 2.39 (m, 2H), 3.54 (t, 2H), 3.78 (m, 2H), 3.80 (s, 3H), 4.69 (t, 2H).

MS ES+ m/z 356 [MH]^+

**Preparation 195**

2-(3-Fluoropropoxy)ethanol
The title compound was obtained in 71% yield, from 3-fluoropropan-1-ol and 1,3,2-dioxathiolane 2,2-dioxide, following a similar procedure to that described in preparation 193.

$^1$H NMR (CDCl$_3$, 400 MHz) $\delta$: 1.96 (m, 2H), 2.10 (bs, 1H), 3.58 (t, 2H), 3.62 (t, 2H), 3.75 (t, 2H), 4.50 (dd, 1H), 4.62 (dd, 1H).

Preparation 196

1-[2-(3-Fluoroproxy)ethyl]-3-(methoxycarbonyl)-4-nitro-1H-pyrazole-5-carboxylic acid

The title compound was obtained in 92% yield from dimethyl 4-nitropyrazole-3,5-dicarboxylate and the alcohol from preparation 195 following the procedure described in preparation 187.

$^1$H NMR (CDCl$_3$, 400 MHz) $\delta$: 1.81-1.95 (m, 2H), 3.56 (t, 2H), 3.83 (t, 2H), 3.97 (s, 3H), 4.38 (m, 1H), 4.48 (m, 1H), 4.82 (m, 2H).

MS ES+ m/z 320 [MH]$^+$

Preparation 197

Methyl 5-(aminocarbonyl)-1-[(2S)-2-methoxypropyl]-4-nitro-1H-pyrazole-3-carboxylate
Oxalyl chloride (6.83mL, 78.3mmol) was added to a solution of the acid from preparation 187 (15g, 52.2mmol) in dichloromethane (250mL) at 0°C. N,N-Dimethylformamide (0.15mL) was added and the mixture was allowed to stir for 18 hours at room temperature. Tlc analysis (dichloromethane:methanol:0.88 ammonia, 95:5:1) showed starting material remaining, so additional oxalyl chloride (0.91mL, 10mmol) was added dropwise and the reaction stirred for a further 18 hours at room temperature. The solution was evaporated under reduced pressure and the residue was dissolved in tetrahydrofuran (250mL). The solution was cooled to 0°C, 0.88 ammonia (20mL) added dropwise, and once addition was complete, the reaction was stirred at room temperature for 1 hour. The reaction was concentrated under reduced pressure and the residue partitioned between dichloromethane (200mL) and water (50mL) and the layers separated. The aqueous solution was extracted with further dichloromethane (200mL), the organic solutions combined, dried over magnesium sulphate and evaporated under reduced pressure to give the title compound as a white solid.

$^1$H NMR (DMSO-D$_6$, 400MHz) $\delta$: 1.25 (d, 3H), 3.30 (s, 3H), 3.85 (m, 1H), 4.00 (s, 3H), 4.40-4.50 (m, 2H), 6.20 (s, 1H), 7.50 (s, 1H).

MS APCI+ m/z 287 [MH]$^+$

Preparation 198

Methyl 5-(aminocarbonyl)-1-[2-(cyclobutyloxy)ethyl]-4-nitro-1H-pyrazole-3-carboxylate

A solution of oxalyl chloride (6.71mL, 76.7mmol) in dichloromethane (30mL) was added slowly to a solution of the acid from preparation 189 (20g, 63.9mmol) and
N,N-dimethylformamide (0.28mL) in dichloromethane (140mL) with stirring and the mixture stirred at room temperature for 2 hours. The mixture was concentrated under reduced pressure and the residue azeotroped with dichloromethane (4x200mL) to give an orange oil that was dried in vacuo. The residue was dissolved in tetrahydrofuran (170mL), the solution cooled to -78°C and concentrated aqueous ammonia (23.2 mL, 0.42mol) was added dropwise. Once addition was complete, the reaction was stirred for a further 2 hours at -78°C. The reaction was quenched by the addition of excess 6N hydrochloric acid (17mL) at -78°C. The mixture was allowed to warm to room temperature and the tetrahydrofuran was removed under reduced pressure. The resulting aqueous suspension was filtered, and the resulting solid washed with saturated sodium bicarbonate solution (2x50mL). The solid was then washed with water until the filtrate was neutral, then dried in vacuo.

The solid was stirred for 1 hour in a solution of ether:methanol (10:1 by volume, at 5mL/g solid), then filtered and dried. The solid was then stirred in a solution of ether:methanol (5:1 by volume, 5mL/g solid), filtered and dried in vacuo to afford the title compound, 10.34g.

1H NMR (CDCl₃, 400 MHz) δ: 1.41-1.82 (m, 4H), 2.17 (m, 2H), 3.74 (t, 2H), 3.86 (m, 1H), 3.97 (s, 3H), 4.60 (t, 2H), 6.06 (br s, 1H), 7.54 (br s, 1H).

**Preparation 199**

**Methyl 5-(aminocarbonyl)-4-nitro-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazole-3-carboxylate**

![Chemical Structure](image)

The carboxylic acid from preparation 192 (70.0g, 204mmol) was dissolved in a mixture of dichloromethane (1000mL) and N,N-dimethylformamide (1mL) under nitrogen at 20°C. Oxalyl chloride (25mL, 366mmol) was added dropwise with
stirring. The mixture was stirred for 16 hours then concentrated under reduced pressure. Three portions of dichloromethane (200mL) were added and evaporated sequentially to remove excess oxalyl chloride. The residue was dissolved in tetrahydrofuran (1000mL) and cooled to -78°C. Concentrated aqueous 0.88 ammonia (70mL) was added dropwise maintaining the mixture at -78°C. After the addition was complete the mixture was stirred for 1 hour, and then an excess of hydrochloric acid was added at -78°C (to give pH1). The mixture was allowed to warm to room temperature and the solvent was removed under reduced pressure. The resulting cream-coloured solid was collected by filtration and washed with water (3 x 100mL) to give a colourless solid (47.01 g). Trituration of the solid with a mixture of diethyl ether and methanol (20:1, 20mL/g) gave the title compound as a colourless solid (40.0g, 61%).

\(^1\)H NMR (CDCl\(_3\), 400 MHz) 3.78 (q, 2H), 3.95 (s, 3H), 3.98 (t, 2H), 4.76 (t, 2H), 5.91 (br s, 1H), 7.03 (br s, 1H).

**Preparation 200**

**Methyl 5-(aminocarbonyl)-1-[2-(2,2-difluoroethoxy)ethyl]-4-nitro-1H-pyrazole-3-carboxylate**

The title compound was obtained as a white solid from the compound from preparation 191, following the procedure described in preparation 199.

\(^1\)H NMR (DMSO-d\(_6\), 400 MHz) 3.63 (m, 2H), 3.85 (m, 5H), 4.39 (t, 2H), 5.84-6.19 (m, 1H), 8.38 (s, 1H), 8.45 (s, 1H).

Methyl 5-(aminocarbonyl)-1-[2-(3-fluoropropoxy)ethyl]-4-nitro-1H-pyrazole-3-carboxylate

The title compound was obtained as a white solid from the acid from preparation 196, following a similar procedure to that described in preparation 199.

$^1$H NMR (CDCl$_3$, 400 MHz) δ: 1.83-1.99 (m, 2H), 3.58 (t, 2H), 3.84 (t, 2H), 3.98 (s, 3H), 4.40 (m, 1H), 4.54 (m, 1H), 4.70 (t, 2H).

MS APCI+ 319 [MH]^+

**Preparation 203**

Methyl 4-amino-5-(aminocarbonyl)-1-[(2S)-2-methoxypropyl]-1H-pyrazole-3-carboxylate
A solution of the compound from preparation 197 (7.1g, 25mmol) and palladium hydroxide (500mg) in methanol (200mL) was warmed to gentle reflux, and then ammonium formate (5.95g, 94mmol) added portionwise (care exotherm). Once the addition was complete the reaction was stirred under reflux for 18 hours under nitrogen. The cooled mixture was filtered through wet Arbocel®, and the filtrate evaporated under reduced pressure to give the title compound as a yellow oil, 5.4g. 

$^1$H NMR (CDCl$_3$, 400 MHz) δ: 1.25 (d, 3H), 3.30 (s, 3H), 3.90 (m, 4H), 4.21-4.50 (m, 2H).

MS APCI+ m/z 279 [MNa]$^+$

Preparation 204

Methyl 4-amino-5-(aminocarbonyl)-1-[2-(cyclobutyl oxy)ethyl]-1H-pyrazole-3-carboxylate

A solution of the compound from preparation 198 (10.34g, 33mmol) in methanol (400mL) was hydrogenated over 10% palladium on charcoal (Degussa 101 type, 2.1g) at 50psi H$_2$ and 50°C for 5 hours. The solution was filtered through Arbocel®
filter aid. The filtrate was concentrated under reduced pressure, to afford the title compound as a colourless liquid, 9.32g.

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 1.39-1.52 (m, 1H), 1.60-1.80 (m, 3H), 2.12 (m, 2H), 3.80 (t, 2H), 3.90 (m, 4H), 4.32-4.70 (m, 2H).

MS ES+ m/z 305 [MNa]$^+$

**Preparation 205**

Methyl 4-amino-5-(aminocarbonyl)-1-[2-(2,2-difluorooxy)ethyl]-1H-pyrazole-3-carboxylate

A mixture of the compound from preparation 200 (4.83g, 15mmol) and 10% palladium on charcoal (1.2g) in methanol (250mL) was hydrogenated at 3 Bar of hydrogen and room temperature for 24 hours. The mixture was warmed to 50°C, filtered through Arbocel®, washing through with warm methanol (500mL). The filtrate was concentrated under reduced pressure, and the residue azeotroped with acetonitrile to afford the title compound as a white solid, 3.8g.

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 3.68 (m, 2H), 3.91 (s, 3H), 4.03 (t, 2H), 4.61 (t, 2H), 5.61-5.96 (m, 1H), 6.20-6.39 (br s, 2H).

MS ES+ m/z 293 [MH]$^+$

**Preparation 206**

Methyl 4-amino-5-(aminocarbonyl)-1-[2-(2,2-trifluorooxy)ethyl]-1H-pyrazole-3-carboxylate
A solution of the compound from preparation 199 (40.0g, 118mmol) in methanol (640mL) was hydrogenated over 10% palladium on charcoal (10.0g) at 3 bar and 50°C for 3 hours. The hot solution was filtered through Arbocel® filter aid and the filter cake was washed with dichloromethane. The filtrate was concentrated under reduced pressure. The residue was kept under vacuum overnight at room temperature to provide the title product as an off-white solid, (34.2g, 94%).

^1H NMR (CDCl₃, 400MHz) δ: 3.80 (q, 2H), 3.91 (s, 3H), 4.07 (t, 2H), 4.63 (t, 2H), 6.29 (br s, 2H).

**Preparation 207**

Methyl 4-amino-5-(aminocarbonyl)-1-[2-(3,3,3-trifluoropropoxy)ethyl]-1H-pyrazole-3-carboxylate

The title compound was obtained as an off-white solid, from the compound from preparation 201 following a similar procedure to that described in preparation 205.

^1H NMR (DMSO-d₆, 400MHz) δ: 2.41 (m, 2H), 3.52 (t, 2H), 3.68 (t, 2H), 3.74 (s, 3H), 4.49 (t, 2H), 5.09 (s, 2H), 7.40 (s, 2H).

MS APCI+ m/z 325 [MH]^+

**Preparation 208**

Methyl 4-amino-5-(aminocarbonyl)-1-[2-(3-fluoropropoxy)ethyl]-1H-pyrazole-3-carboxylate
The title compound was prepared in quantitative yield from the compound from preparation 202, following the procedure described in preparation 206. 

$^1$H NMR (CDCl$_3$, 400 MHz) $\delta$: 1.83-1.99 (m, 2H), 3.61 (t, 2H), 3.95 (m, 5H), 4.38 (m, 1H), 4.50 (m, 1H), 4.58 (m, 2H).

Preparation 209

Methyl 1-[(2S)-2-methoxypropyl]-5,7-dioxo-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A mixture of the amine from preparation 203 (2.7g, 9.7mmol) and 1,1'-carbonyldiimidazole (1.89g, 11.7mmol) in N,N-dimethylformamide (80mL) was stirred at room temperature for 1 hour. The mixture was concentrated under reduced pressure and the residue dissolved in acetone. The mixture was sonicated for 30 minutes, and the resulting precipitate filtered off and dried. The filtrate was sonicated again, the precipitate was filtered, dried and combined to afford the title compound, 740mg.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 1.05 (m, 3H), 3.15 (s, 3H), 3.75-3.85 (m, 1H), 3.88 (s, 3H), 4.40, 4.60 (2xm, 2H).

MS APCI+ 305 [MNa]$^+$

Preparation 210
Methyl 1-[2-(cyclobutyl oxy)ethyl]-5,7-dioxo-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the amide from preparation 204 (9.32g, 33mmol) in acetonitrile (70mL) was added dropwise to a refluxing solution of 1,1'-carbonyldiimidazole (13.38g, 82.5mmol) in acetonitrile (230mL). The reaction was then stirred for a further 18 hours under reflux, and then cooled to 0°C. The resulting yellow precipitate was filtered off, washed with ice-cold acetonitrile and dried *in vacuo* to afford the title compound, 7.28g.

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 1.26-1.40 (m, 1H), 1.54 (m, 1H), 1.63 (m, 2H), 2.01 (m, 1H), 3.63 (t, 2H), 3.81 (m, 4H), 4.59 (t, 2H), 11.78 (br s, 1H), 11.38 (br s, 1H).

MS ES$^+$ m/z 307 [M-H]$^-$

**Preparation 211**

Methyl 1-[2-(2,2-difluoroethoxy)ethyl]-5,7-dioxo-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of 1,1'-carbonyldiimidazole (3.16g, 19.5mmol) in acetonitrile (60mL) was added portionwise over 3 hours to a solution of the compound from preparation 205 (3.8g, 13.0mmol) in acetonitrile (150mL) stirring under reflux. The reaction was then stirred under reflux for a further 3 hours and allowed to cool. The reaction mixture was concentrated under reduced pressure and the residue triturated with water, the
resulting solid filtered off, washed with water and dried in vacuo to afford the title compound as a pale grey solid, 3.17g.

$^1$H NMR (DMSO-d$_6$, 400MHz) δ: 3.61 (m, 2H), 3.79 (s, 3H), 3.90 (t, 2H), 3.64 (t, 2H), 5.99 (m, 1H), 10.78 (bs, 1H), 11.35 (bs, 1H).

MS ES+ m/z 318 [MH]$^+$

Preparation 212

Methyl 5,7-dioxo-1-[2-(2,2,2-trifluoroethoxy)ethyl]-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the amine from preparation 206 (21.7g, 70.0mmol) in acetonitrile (150mL) was added dropwise over 2 hours to a stirred solution of 1,1'-carbonyldiimidazole (17.02g, 105mmol) in refluxing acetonitrile (850mL) under nitrogen. The mixture was heated under reflux for 2 hours, cooled and the solvent was removed under reduced pressure. The residue was treated with water (150mL).

The resulting pale grey solid was filtered off, washed with water (3 x 100mL), and dried in vacuo at 80°C to provide the title compound, 21.26g.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 3.79 (q, 2H), 3.98 (s, 3H), 4.07 (t, 2H), 4.77 (t, 2H), 7.87 (br s, 1H), 8.41 (br s, 1H).

MS ES- m/z 335 [M-H]-

Preparation 213

Methyl 5,7-dioxo-1-[2-(3,3,3-trifluoropropoxy)ethyl]-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
The title compound was obtained as a pale yellow solid from the compound from preparation 207 and 1,1'-carbonyldimidazole, following a similar procedure to that described in preparation 212.

$^1\text{H NMR (CDCl}_3, 400\text{MHz)} \delta$: 2.26 (m, 2H), 3.61 (t, 2H), 3.88 (t, 2H), 3.98 (s, 3H), 4.75 (t, 2H), 8.05 (s, 1H), 8.49 (s, 1H).

Preparation 214

Methyl 5,7-dioxo-1-[2-(3-fluoropropoxy)ethyl]-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A solution of the amine from preparation 208 (2.3g, 8.0mmol) in acetonitrile (35mL) was added dropwise to a stirred solution of 1,1'-carbonyldimidazole (2.0g, 12.3mmol) in refluxing acetonitrile (35mL) under nitrogen. The mixture was then heated under reflux for 2 hours, and cooled to room temperature. The resulting solid was filtered off, washed with acetonitrile and the filtrate evaporated under reduced pressure. The residue was triturated with water, the solid filtered off and the two isolated solids combined and dried in vacuo to afford the title compound, 2.3g.

$^1\text{H NMR (DMSO-D}_6, 400\text{ MHz)} \delta$: 1.70-1.92 (m, 2H), 3.42 (t, 2H), 3.79 (t, 2H), 3.83 (s, 3H), 4.27 (dd, 1H), 4.40 (dd, 1H), 4.65 (m, 2H).

MS APCI+ m/z 315 [MH]$^+$

Preparation 215

Methyl 5,7-dichloro-1-[(2S)-2-methoxypropyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
Phosphorous oxychloride (3.46mL, 37.2mmol) was added to a solution of the compound from preparation 209 (700mg, 2.48mmol) and tetraethylammonium chloride hydrate (616mg, 3.72mmol) in acetonitrile (8mL) and the reaction mixture heated under reflux for 24 hours. The cooled mixture was concentrated under reduced pressure and the residue azeotroped with toluene (3x) to provide the title compound as a white solid.

\(^1\text{H} \text{NMR (CDCl}_3, 400MHz) \delta: \ 1.30 \ (d, 3H), \ 3.15 \ (s, 3H), \ 3.90 \ (m, 1H), \ 4.10 \ (s, 3H), \ 4.68 \ (dd, 1H), \ 4.98 \ (dd, 1H).\)

**Preparation 216**

*Methyl 5,7-dichloro-1-[2-(cyclobutyloxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate*

\[ \text{H}_3\text{C}-\text{O} \]

\[ \text{Cl} \]

\[ \text{N} \]

N,N-Diisopropylethylamine (3.4mL, 19.5mmol) was added dropwise to a solution of the compound from preparation 210 (2g, 6.5mmol), phosphorous oxychloride (9.04mL, 97.3mmol) and tetraethylammonium chloride (2.15g, 13.0mmol) in acetonitrile (25mL) and the reaction heated under reflux for 18 hours. Tlc analysis showed starting material remaining, so additional phosphorous oxychloride (10mL,
107 mmol) was added and the reaction heated under reflux for a further 24 hours. The cooled mixture was concentrated under reduced pressure and the residue azeotroped with toluene (2x100 mL). The product was dissolved in dichloromethane (500 mL), washed with water (3x200 mL), dried over magnesium sulphate and evaporated under reduced pressure. The crude product was purified by column chromatography using an Isolute® silica gel cartridge and an elution gradient of ethyl acetate:pentane (20:80 to 100:0) to provide the title compound as a white solid, 1.0 g.

\(^1\text{H NMR (CDCl}_3, \text{400MHz) \delta: 1.40 (m, 1H), 1.55-1.75 (m, 3H), 2.10 (m, 2H), 3.80 (m, 3H), 4.10 (s, 3H), 5.00 (t, 2H).}"

**Preparation 217**

**Methyl 5,7-dichloro-1-[2-(2,2-difluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate**

Phosphorous oxychloride (14 mL, 148 mmol) was added portionwise to a solution of the compound from preparation 211 (3.13 g, 9.84 mmol) and tetraethylammonium chloride (4.08 g, 2.46 mmol) in propionitrile (50 mL) and the reaction then stirred under reflux for 18 hours. The cooled mixture was concentrated under reduced pressure and the residue azeotroped with toluene (2x). The residual solid was triturated with pentane:ether (40 mL:10 mL), and the resulting solid filtered off. This was pre-adsorbed onto silica gel and purified by column chromatography on silica gel using ethyl acetate:pentane (34:66) to afford the title compound as a white solid, 2.69 g.

\(^1\text{H NMR (CDCl}_3, \text{400MHz) \delta: 3.55 (m, 2H), 4.03 (t, 2H), 4.06 (s, 3H), 5.00 (t, 2H), 5.66 (m, 1H).}"

Microanalysis found: C, 37.14; H, 2.85; N, 15.68. \(\text{C}_{11}\text{H}_{10}\text{Cl}_2\text{F}_2\text{N}_4\text{O}_3\) requires C, 37.20; H, 2.84; N, 15.78%.
Preparation 218

**Methyl 5,7-dichloro-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate**

A mixture of the compound from preparation 212 (10g, 29.8mmol), phosphorous oxychloride (42mL, 447mmol) and tetraethylammonium chloride hydrate (14.8g, 89.4mmol) in propionitrile (125mL) was stirred under reflux for 8 hours. The cooled mixture was concentrated under reduced pressure and the residue azeotroped with toluene. The product was partitioned between dichloromethane (600mL) and water (500mL) and the layers separated. The aqueous solution was further extracted with dichloromethane (2x500mL) and the combined organic solutions washed with water (500mL) and brine (200mL), then dried over magnesium sulphate and concentrated under reduced pressure. The crude product was purified by column chromatography on silica gel using an elution gradient of ethyl acetate:pentane (33:67 to 50:50) to afford the title compound as a white solid, 5.4g.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 3.75 (q, 2H), 4.10 (s, 3H), 4.15 (t, 2H), 5.05 (t, 2H).

**Preparation 227**

Methyl 5-chloro-7-[(3-methylphenyl)amino]-1-[-2-(2,2,2-trifluoroethoxy)ethy]-1$H$-pyrazolo[4,3-$d$]pyrimidine-3-carboxylate

A mixture of the chloro compound from preparation 218 (746mg, 2mmol) and 3-methylaniline (650$\mu$L, 6mmol) in dimethylsulphoxide (8mL) was stirred at room temperature for 3 hours. The mixture was partitioned between dichloromethane (200mL) and water (50mL), and the layers separated. The organic phase was washed with 1M hydrochloric acid (20mL) and water (2x50mL), then dried over magnesium sulphate and evaporated under reduced pressure to afford the title compound as a white solid, 880mg.

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 2.38 (s, 3H), 3.98 (q, 2H), 4.05 (s, 3H), 4.30 (t, 2H), 4.90 (t, 2H), 7.00 (d, 1H), 7.31 (m, 1H), 7.35 (s, 1H), 7.55 (d, 1H), 8.45 (s, 1H).

MS APCI+ m/z 444 [MH]$^+$

**Preparation 228**
Methyl 5-chloro-7-[(4-fluoro-3-methylphenyl)amino]-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The title compound was obtained from the chloro compound from preparation 218 and 4-fluoro-3-methylamine, following the procedure described in preparation 227. 

$^1$H NMR (CDCl$_3$, 400MHz) δ: 2.30 (s, 3H), 3.98 (q, 2H), 4.05 (s, 3H), 4.27 (t, 2H), 4.90 (s, 2H), 7.06 (m, 1H), 7.38 (m, 1H), 7.47 (m, 1H), 8.36 (s, 1H).

**Preparation 231**

5-Chloro-1-(2-ethoxyethyl)-7-[(4-(hydroxymethyl)pyridin-2-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

![Chemical Structure](image)
A solution of the compound from preparation 222 (229mg, 0.44mmol) in 1N sodium hydroxide solution (2.2mL) and dioxan (10mL) was stirred at room temperature for 72 hours. The mixture was acidified to pH 4 using 1N hydrochloric acid and extracted with a solution of 10% methanol in dichloromethane. The combined organic extracts were dried over magnesium sulphate and evaporated under reduced pressure to afford the title compound as a yellow solid, 140mg.

$^1$H NMR (DMSO-$d_6$, 400MHz) δ: 1.07 (t, 3H), 3.55 (q, 2H), 3.93 (t, 2H), 4.65 (t, 2H), 4.99 (s, 2H), 5.60 (m, 1H), 7.10 (m, 1H), 8.29 (m, 1H).

Preparation 232

5-Chloro-1-[2-(cyclobutyloxy)ethyl]-7-[(4-methylpyridin-2-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

A solution of the ester from preparation 224 (600mg, 1.44mmol) in dioxane (5mL) and 1N sodium hydroxide solution (5mL) was stirred at room temperature for 18 hours. The solution was concentrated under reduced pressure and diluted with 1M citric acid solution (25mL). The resulting precipitate was filtered off, washed with ether and dried in vacuo at 50°C to afford the title compound as a yellow solid, 566mg.

$^1$H NMR (DMSO-$d_6$+TFA-d, 400MHz) δ: 1.35 (m, 1H), 1.55 (m, 1H), 1.75 (t, 2H), 2.05 (m, 2H), 2.40 (s, 3H), 3.79 (t, 2H), 3.95 (m, 1H), 4.90 (t, 2H), 6.98 (d, 1H), 7.85 (s, 1H), 8.20 (d, 1H).

MS APCI+ m/z 403 [MH]$^+$

Preparation 233
5-Chloro-7-[(4-methylpyridin-2-yl)amino]-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

A mixture of the ester from preparation 226 (1.2g, 2.70mmol) and 1M sodium hydroxide solution (4.1mL, 4.1mmol) in dioxane (17.4mL) was stirred at room temperature for 18 hours. The reaction mixture was concentrated under reduced pressure and the residue dissolved in water (50mL). The solution was washed with dichloromethane (10mL), and then acidified using 1M citric acid. The resulting solid was filtered off and dried in vacuo to afford the title compound, 925mg.

1H NMR (DMSO-D₆, 400MHz) δ: 2.50 (s, 3H), 3.32 (q, 2H), 4.07 (t, 2H), 5.06 (t, 2H), 6.93 (d, 1H), 7.73 (s, 1H), 8.13 (d, 1H).

Preparation 234

3-[[tert-Butyl(dimethyl)silyl]oxy)methyl]-5-chloro-1-(2-ethoxyethyl)-N-(6-methylpyrimidin-4-yl)-1H-pyrazolo[4,3-d]pyrimidin-7-amine
A solution of 4-amino-6-methylpyrimidine (1.13g, 10.4mmol) and sodium bis(trimethylsilyl)amide (3.80g, 20.74mmol) in tetrahydrofuran (40mL) was stirred at room temperature for 15 minutes. A solution of the dichloro compound from preparation 154 (3.5g, 8.64mmol) in tetrahydrofuran (50mL) was added and the reaction stirred at room temperature for 1.5 hours. The reaction mixture was concentrated under reduced pressure and the residue partitioned between dichloromethane and saturated ammonium chloride solution and the layers separated. The organic phase was dried over magnesium sulphate and evaporated under reduced pressure to give a red solid. The product was purified by column chromatography using an Isolute® silica gel cartridge and an elution gradient of methanol:dichloromethane (0:100 to 3:97) to provide the title compound as an orange solid, 3.7g.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 0.02 (s, 6H), 0.79 (s, 9H), 1.06 (t, 3H), 2.44 (s, 3H), 3.53 (q, 2H), 3.82 (t, 2H), 4.71 (t, 2H), 4.89 (s, 2H), 8.19 (s, 1H), 8.59 (s, 1H).

Preparation 236

5-Chloro-1-(2-ethoxyethyl)-7-[(6-methyl[pyrimidin-4-yl]amino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbaldehyde

![Chemical Structure]

Dess-Martin periodinane (4.56g, 10.73mmol) was added portionwise to an ice-cooled solution of the alcohol from preparation 235 (2.6g, 7.15mmol) in dichloromethane (150mL) and the reaction then stirred at room temperature for a further 2 hours. A solution of sodium thiosulphate (7.5g, 30mmol) in water (75mL) was added dropwise, followed by saturated sodium bicarbonate solution (75mL) and then ether (75mL). The mixture was stirred for 15 minutes, and the layers separated. The aqueous solution was extracted with further dichloromethane (2x40mL) and the combined organic solutions dried over magnesium sulphate and evaporated under reduced pressure. The residual brown solid was purified by column chromatography using an Isolute® silica gel cartridge and an elution gradient of ethyl acetate:pentane (0:100 to 100:0) to provide the title compound as a solid, 1.66g.

\(^1^H\ NMR\ (CDCl_3,\ 400MHz)\ \delta:\ 1.25\ (t,\ 3H),\ 2.63\ (s,\ 3H),\ 3.72\ (q,\ 2H),\ 4.06\ (t,\ 2H),\ 4.91\ (t,\ 2H),\ 8.29\ (s,\ 1H),\ 8.81\ (s,\ 1H),\ 10.34\ (s,\ 1H),\ 10.42\ (s,\ 1H).

Preparation 237

5-Chloro-1-(2-ethoxyethyl)-7-[(6-methylpyrimidin-4-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

2-Methyl-2-butene (160mL, 0.32mol) was added to a solution of the aldehyde from preparation 236 (1.66g, 4.59mmol) in t-butanol (300mL). A solution of sodium chlorite (4.96g, 55.1mmol) and sodium dihydrogen phosphate (5.07g, 42.2mmol) in water (60mL) was added dropwise over 5 minutes, and the reaction then stirred at room temperature for 1 hour. The reaction mixture was diluted with dichloromethane (300mL) and water (150mL) and the layers separated. The aqueous layer was allowed to evaporate and the resulting precipitate was filtered off and dried in vacuo to give the title compound, 1.02g.

$^1$H NMR (400 MHz, DMSO-$d_6$) δ: 1.07 (t, 3H), 2.48 (s, 3H), 3.51 (m, 2H), 3.88 (t, 2H), 4.90 (t, 2H), 8.02 (br s, 1H), 8.78 (s, 1H).

MS APCI$^+$ m/z 378 [MH]$^+$

Preparation 238

5-Chloro-1-(2-ethoxyethyl)-7-[(3-methylphenyl)amino]-1H-indazole-3-carboxylic acid
A mixture of the ester from preparation 81 (800mg, 2.06mmol) and 1N sodium hydroxide solution (5mL, 5mmol) in dioxan (3mL) was stirred at room temperature for 18 hours. The reaction was concentrated under reduced pressure and the residue diluted with 1M citric acid solution and the mixture sonicated. The resulting precipitate was filtered off, washed with water and ether and dried \textit{in vacuo} to give the title compound as a white solid, 600mg.

$^1$H NMR (DMSO-$d_6$, 400MHz) $\delta$: 1.00 (t, 3H), 2.35 (s, 3H), 3.50 (q, 2H), 3.82 (t, 2H), 4.95 (t, 2H), 7.01 (d, 1H), 7.35 (t, 1H), 7.41 (s, 1H), 7.50 (d, 1H), 9.39 (s, 1H).

MS APCI+ m/z 376 [MH$^+$]

**Preparation 239**

5-Chloro-1-(2-ethoxyethyl)-7-[(1-methyl-6-oxo-1,6-dihydropyridin-3-yl)amino]-1H-indazole-3-carboxylic acid

The compound from preparation 58 (10.85g, 34mmol) was added portionwise to a solution of 3-amino-1-methyl-1,6-dihydropyridin-6-one (EP 677519) (4.6g, 37mmol) and N-ethylidiisopropylamine (5.92mL, 34mmol) in dimethylsulphoxide (40mL), and the reaction then stirred at room temperature for 4 hours. The mixture was diluted with water (600mL), and the resulting solid filtered off, washed with water and dried \textit{in vacuo}, 10.8g.

A portion of this solid (6.75g, 16.59mmol) was dissolved in dioxan (65mL) and the solution treated with 1N sodium hydroxide (33mL, 1M, 33mmol), and the reaction stirred at room temperature for 18 hours. The reaction was concentrated under reduced pressure, the residue dissolved in water (120mL), washed with dichloromethane (15mL), then acidified to pH 3 using solid citric acid. The resulting
precipitate was filtered off, washed with water (3x20mL) and dried in vacuo to afford the title compound as a yellow solid, 6.19g.

\[ ^1H \text{ NMR (DMSO-} \text{D}_6, 400\text{MHz)} \delta: 0.95 (t, 3H), 3.40 (q, 2H), 3.47 (s, 3H), 3.79 (t, 2H), 4.92 (t, 2H), 6.49 (d, 1H), 7.58 (dd, 1H), 7.90 (s, 1H), \]

MS APCI+ m/z 376 [MH]+

**Preparation 240**

**Benzyl cyclobutylcarbamate**

\[
\begin{align*}
\text{H} & \text{N} \quad \text{O} \\
\text{O} & \text{N} \quad \text{O}
\end{align*}
\]

Benzyl chloroformate (5.2mL, 36.4mmol) was added dropwise to an ice-cold solution of cyclobutylamine (2g, 28.1mmol) in dichloromethane (20mL), with stirring.

Triethylamine (4.7mL, 33.7mmol) was added dropwise to the ice-cold solution, and once the addition was complete the reaction was allowed to warm to room temperature and stirred for 18 hours. The reaction was washed with saturated sodium bicarbonate solution (x2), dried over sodium sulphate and concentrated under reduced pressure. The residue was purified by column chromatography on silica gel using dichloromethane as eluant to afford the title compound, 3.72g.

\[ ^1H \text{ NMR (CDCl}_3, 300\text{MHz)} \delta: 1.68 (m, 2H), 1.82 (m, 2H), 2.35 (m, 2H), 4.19 (m, 1H), 4.92 (m, 1H), 5.14 (s, 2H), 7.25-7.39 (m, 5H). \]

MS TSP+ m/z 223.2 [MH]+

**Preparation 241**

**N-Cyclobutyl-N-methylamine hydrochloride**

\[
\begin{align*}
\text{HCl} & \text{H} \\
\text{H} & \text{N} \quad \text{CH}_3
\end{align*}
\]

A solution of the compound from preparation 240 (500mg, 2.43mmol) was added dropwise to an ice-cold solution of lithium aluminium hydride (12.18mL, 1M in tetrahydrofuran, 12.18mmol) in tetrahydrofuran (12mL), and the reaction mixture
stirred at room temperature for 24 hours. The mixture was cooled to 0°C, water (0.46mL), followed by 15% sodium hydroxide solution (0.46mL) and finally further water (1.4mL) were added dropwise. The resulting precipitate was filtered off and washed with ether. The filtrate was washed with water and acidified to pH 2 using 1M hydrochloric acid in ether. The solution was allowed to evaporate at room temperature, the residual oil dissolved in methanolic ether, dried over sodium sulphate and evaporated under reduced pressure to provide the title compound. 

$^1$H NMR (CDCl$_3$, 400MHz) $\delta$: 1.78-2.04 (m, 2H), 2.34 (m, 2H), 2.44 (m, 2H), 2.54 (s, 3H), 3.58 (m, 1H), 9.60 (br s, 2H).

**Preparations 242 to 244**

The appropriate amine (HNR$^2$R$^3$) (2mmol) and cesium fluoride (100mg, 0.67mmol) were added to a solution of the chloride from preparation 233 (260mg, 0.67mmol) in dimethylsulphoxide (2mL) in a Reactivial®. The reaction mixture was then sealed and heated at 120°C for 18 hours. The cooled solution was partitioned between dichloromethane (50mL) and water (50mL) and the layers separated. The organic phase was washed with water (50mL), dried over magnesium sulphate and evaporated under reduced pressure. The crude products were purified by column chromatography on silica gel using dichloromethane:methanol (98:2) as eluant to afford the title compounds.

Preparation 259

Methyl 1-((2-ethoxyethyl)-7-[(4-methylpyridin-2-yl)amino]-5-pyrrolidin-1-yl-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
The title compound was obtained as a yellow oil, from the chloride from preparation 72 and pyrrolidine, following a similar procedure to that described in preparation 245-249, except 5 eq N-ethylidiisopropylamine was added to the reaction, and the product was purified by column chromatography using an Isolute® silica gel cartridge and dichloromethane:methanol:0.88 ammonia (100:0:0 to 95:5:0.5) as eluant.

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 1.05 (t, 3H), 2.02 (m, 4H), 2.40 (s, 3H), 3.60 (q, 2H), 3.65 (m, 4H), 3.90 (m, 5H), 4.80 (t, 2H), 6.95 (d, 1H), 8.18 (d, 1H), 8.50 (s, 1H).

MS APCI+ m/z 426 [MH]$^+$

Preparation 260

Methyl 5-[isopropyl(methyl)amino]-1-[(2S)-2-methoxypropyl]-7-[(4-methylpyridin-2-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A mixture of the chloride from preparation 221 (110mg, 0.28mmol), N-ethylidiisopropylamine (0.25mL, 1.40mmol), N-methylidiisopropylamine (0.15mL,
1.40mmol) and tetraethylammonium fluoride (37mg, 0.28mmol) in 1-methyl-2-pyrrolidinone (1mL) was heated in a Reactivial® at 120°C for 18 hours. The cooled mixture was concentrated under reduced pressure and the residue partitioned between dichloromethane (50mL) and water (50mL) and the layers separated. The aqueous phase was extracted with additional dichloromethane (50mL), and the combined organic solutions washed with water (100mL) dried over magnesium sulphate and evaporated under reduced pressure. The crude product was purified by column chromatography using an Isolute® silica gel cartridge using dichloromethane as eluant to provide the title compound as a yellow oil, 43mg.

'1H NMR (CD₃OD, 400MHz) δ: 1.21 (m, 6H), 1.28 (d, 3H), 2.39 (s, 3H), 3.03 (s, 3H), 3.40 (s, 3H), 3.98 (m, 4H), 4.50-4.70 (m, 2H), 5.17 (m, 1H), 6.92 (d, 1H), 8.18 (m, 2H). MS APCI+ m/z 428 [MH]+

Preparation 261

5-Chloro-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-c]pyrimidine-3-carboxamide

A mixture of the acid from preparation 233 (300mg, 0.70mmol), methanesulphonamide (87mg, 0.91mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (175mg, 0.91mmol) and 4-dimethylamino pyridine (102mg, 0.91mmol) in N,N-dimethylformamide (3mL) was stirred at room temperature for 18 hours. Tlc analysis showed starting material remaining, so
additional methanesulphonamide (43mg, 0.45mmol), 1-(3-dimethylaminopropyl)-3-
ethylcarbodiimide hydrochloride (87mg, 0.45mmol) and 4-dimethylamino pyridine
(51mg, 0.45mmol) were added and the mixture stirred for a further 4 hours. The
mixture was partitioned between dichloromethane (50mL) and water (50mL) and the
layers separated. The organic solution was washed with 1N hydrochloric acid (5mL)
and water (3x50mL) then dried over sodium sulphate and evaporated under reduced
pressure, to give the title compound, 100mg.

$^1$H NMR (CD$_3$OD, 400MHz) δ: 2.42 (s, 3H), 3.39 (s, 3H), 4.02 (q, 2H), 4.17 (t, 2H),
5.07 (t, 2H), 6.99 (d, 1H), 7.81 (s, 1H), 8.18 (d, 1H).

MS ES- m/z 506 [M-H]

**Example 1**

Methyl 1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-
ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The chloro compound of preparation 72 (130mg, 0.33mmol) was dissolved in
dimethyl sulphoxide (1mL) and the solution treated with tetraethylammonium fluoride
(50mg, 0.33mmol) and N-methylisopropylamine (104μL, 1.0mmol). The reaction
mixture was stirred in a ReactiVial™ at 120°C for 18 hours before being allowed to
cool and concentrated *in vacuo*. The residue was partitioned between ethyl acetate
(50mL) and water (50mL) and the organic phase dried over magnesium sulphate
and concentrated *in vacuo*. The residue was purified by column chromatography on
silica gel eluting with dichloromethane:methanol 100:0 to 97:3 to yield the title
product.
'H NMR (CDCl₃, 400MHz) δ: 1.18 (t, 3H), 1.24 (s, 6H), 2.40 (m, 3H), 3.11 (s, 3H), 3.60 (q, 2H), 3.96 (t, 2H), 4.02 (s, 3H), 4.80 (t, 2H), 5.10 (m, 1H), 6.91 (d, 1H), 8.18 (m, 1H), 8.37 (d, 1H). MS APCI+ m/z 428 [MH]+

Example 2

Methyl 1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The chloro compound of preparation 72 (130mg, 0.33mmol) was dissolved in dimethyl sulfoxide (1mL) and the solution treated with tetraethylammonium fluoride (50mg, 0.33mmol) and N-methylethylamine (86μL, 1.0mmol). The reaction mixture was heated to 110°C in a ReactiVial™ for 18 hours and then allowed to cool to room temperature. The reaction mixture was partitioned between dichloromethane (50mL) and water (50mL) and the organic phase washed with water (2x30mL), dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 90:10 to yield the title product.

'1H NMR (CD₂OD, 400MHz) δ: 1.10 (t, 3H), 1.25 (m, 3H), 2.40 (s, 3H), 3.25 (s, 3H), 3.60 (q, 2H), 3.78 (q, 2H), 3.86 (m, 5H), 4.80 (t, 2H), 6.93 (d, 1H), 8.15 (d, 1H), 8.32 (s, 1H). MS APCI+ m/z 414 [MH]+

The following compounds, of the general formula shown below, were prepared by a method similar to that described for example 2 using the appropriate HNR₃R₄ amine.

- Example 4 was prepared using tert-butyl (1S,4S)-2,5-diaza-bicyclo[2.2.1]heptane-2-carboxylate (Aldrich Chem.) as the HNR²R¹ amine. Prior to being purified by column chromatography, the crude product was dissolved in dichloromethane (5mL) and the solution treated with trifluoroacetic acid (5mL) at room temperature for 4 hours. The reaction mixture was concentrated in vacuo and the residue partitioned between dichloromethane (50mL) and saturated sodium hydrogen carbonate solution (50mL). The organic phase was separated, dried over magnesium sulphate and concentrated in vacuo.
Example 6

Methyl 1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(6-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The chloro compound of preparation 93 (200mg, 0.51mmol) was added to a solution of N-ethylidisopropylamine (440μL, 2.55mmol), isopropylmethylamine (260μL, 2.55mmol) and caesium fluoride (77mg, 0.51mmol) in dimethyl sulphoxide (1mL) and the reaction mixture heated to 120°C in a ReactiVial™ for 18 hours. The reaction mixture was concentrated in vacuo and the residue taken up in 1M citric acid solution (5mL) and extracted with dichloromethane (3x25mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo to yield the title product.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 1.16 (t, 3H), 1.24 (d, 6H), 2.37 (s, 3H), 3.11 (s, 3H), 3.62 (q, 2H), 3.98 (t, 2H), 4.01 (s, 3H), 4.77 (m, 2H), 5.15 (m, 1H), 6.82 (d, 1H), 8.18 (d, 1H), 8.26 (s, 1H), 9.76 (s, 1H).

Example 7

Ethyl 1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
The ethyl ester of preparation 175 (100mg, 0.25mmol) was dissolved in dimethyl sulfoxide (1mL) and the solution treated with N-methyl-ethylamine (78µL, 0.75mmol) and tetraethylammonium fluoride (37mg, 0.25mmol). The reaction mixture was then heated to 120°C in a ReactiVial™ for 18 hours before being allowed to cool. The reaction mixture was concentrated in vacuo, the residue partitioned between ethyl acetate (50mL) and water (50mL) and the organic phase dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:acetonitrile 100:0 to 90:10. The crude product was partitioned between dichloromethane (30mL) and saturated sodium hydrogen carbonate solution (10mL). The organic phase was separated, dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol:0.88 ammonia 95:5:0.5 to yield the title product. 

$^1$H NMR (CDCl$_3$, 400MHz) δ: 1.14 (t, 3H), 1.24 (t, 3H), 1.46 (t, 3H), 2.39 (s, 3H), 3.25 (s, 3H), 3.62 (q, 2H), 3.80 (q, 2H), 3.95 (t, 2H), 4.52 (q, 2H), 4.78 (t, 2H), 6.82 (d, 1H), 8.20 (d, 1H), 8.30 (s, 1H), 9.75 (m, 1H). MS APCI+ m/z 428 [MH]$^+$

The following compounds, of the general formula shown below, were prepared by a method similar to that described for example 7 using the appropriate HNR$^3$R$^4$ amine.

Example 9 – This compound was isolated without purification by column chromatography.

Example 10

2-(Dimethylamino)ethyl 5-dimethylamino-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

The title compound was prepared by a method similar to that described for example 7, using the ester of preparation 176 and a 2M solution of dimethylamine in methanol.

Example 11 to 41

The appropriate monochloro precursor (1eq) was dissolved in dimethyl sulfoxide (1-2mLmmol⁻¹) and the solution treated with the appropriate HNR²Rʰ amine (3eq) and N-ethylidiisopropylamine (3eq). The reaction mixture was then stirred at 120°C for 18 hours, allowed to cool to room temperature and concentrated in vacuo. The residue was dissolved in dichloromethane and the organic phase washed with citric acid.
solution (20mL), dried over magnesium sulphate and concentrated *in vacuo*. The crude product was purified by column chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 94:6 to yield the desired product.

Monochloro precursors from preparations 135, 136, 137, 140, 141, 142, 143, 144, 146, 147, 148, 149, 170 and 171 were used.

Examples 14 and 24-31 were performed without N-ethylidissopropylamine.

Examples 38-41 were performed using caesium fluoride instead of N-ethylidissopropylamine.

Example 12 used the amine of preparation 4 as the HNR3R4 amine.

Example 13 used the amine of preparation 3 as the HNR3R4 amine.

Examples 42 to 48

The monochloro compound of preparation 144 (99mg, 0.27mmol) was dissolved in dimethyl sulfoxide (3mL) and the solution treated with the appropriate HNR3R4 amine (1.08mmol). The reaction mixture was heated to 120°C for 18 hours before being allowed to cool to room temperature. The reaction mixture was diluted with dichloromethane and washed with water, brine (x2) and citric acid. The dichloromethane phase was dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with
dichloromethane:methanol 100:0 to 85:15. The crude product was triturated with ether to give the desired product.

Example 51 was prepared using cyclobutyl-methyl-amine (J. Med. Chem., 1994, 37, 3482-3491) as the HNR\(^3\)R\(^4\) amine.

Examples 67, 68 and 69 were purified by column chromatography on silica gel eluting with dichloromethane:methanol:acetic acid 90:10:1.

Examples 70 and 71 were prepared without the use of N-ethylidiisopropylamine.

Example 75

3-{1-[(2-Ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]-2H-1,2,4-oxadiazol-5-one

The oxadiazolone of preparation 183 (50mg, 0.12mmol) was added to a solution of methylisopropylamine (44mg, 0.60mmol) and N-ethylidiisopropylamine (83μL, 0.60mmol) in dimethyl sulphoxide (1mL) and the reaction mixture stirred at 120°C for 18 hours. The reaction mixture was diluted with ethyl acetate (20mL) and washed with water (15mL). The aqueous phase was then extracted with ethyl acetate (2x20mL), acidified with acetic acid solution and extracted with further ethyl acetate (2x20mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol:acetic acid 100:0:0 to 97.5:2.5:0.25 to yield the title product.

\(^1\)H NMR (CD\(_2\)OD, 400MHz) δ: 1.11 (t, 3H), 1.25 (d, 6H), 2.41 (s, 3H), 3.09 (s, 3H), 3.60 (m, 2H), 3.95 (t, 2H), 4.83 (t, 2H), 5.16 (m, 1H), 6.95 (d, 1H), 8.16 (m, 1H), 8.25 (m, 1H)

MS ES+ m/z 454 [MH]\(^+\)
The following compounds, of the general formula shown below, were prepared by a method similar to that described for example 75 using the monochloro precursor from preparations 183, 184 and 185.

\[ \text{Example 81} \]

1-(2-Ethoxyethyl)-7-(5-fluoropyridin-2-ylamino)-5-(N-isopropyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid
The ester of preparation 108 (30mg, 0.07mmol) and a 1M aqueous solution of sodium hydroxide (105μL, 0.105mmol) were dissolved in dioxane (1mL) and the reaction mixture stirred at room temperature for 18 hours. The reaction mixture was concentrated in vacuo and the residue treated with 1M citric acid solution (5mL) and extracted with dichloromethane (3x50mL). The organics were combined, dried over sodium sulphate and concentrated in vacuo. The crude product was triturated with ether and then filtered to yield the title product as a white solid, 27mg.

$^1$H NMR (CD$_3$OD, 400MHz) δ: 1.22 (t, 3H), 1.30 (d, 6H), 3.12 (s, 3H), 3.70 (q, 2H), 3.98 (t, 2H), 4.84 (t, 2H), 5.01 (m, 1H), 7.71 (m, 1H), 8.29 (m, 1H), 8.31 (d, 1H)

MS ES- m/z 416 [M-H]

The following compounds, of the general formula shown below, were prepared by a method similar to that described for example 81 using the appropriate ester of preparations 103, 106, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 121, 122, 123, 124, 125, 126, 128, 129, 130, 131, 132, 133, 134 and example 6.

1-(2-Ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The ester of preparation 121 (219mg, 0.51mmol) was dissolved in a solution of 1M aqueous sodium hydroxide solution (3mL) in dioxane (1.5mL) and the reaction mixture stirred at room temperature for 18 hours. The reaction mixture was diluted with 1M citric acid solution (50mL) and the mixture washed with dichloromethane (3x100mL). The combined dichloromethane extracts were dried over magnesium sulphate and concentrated *in vacuo*. The residue was purified by column
chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 92:8 to yield the title product as a yellow oil, 80mg (38%).

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 1.12 (t, 3H), 1.30 (d, 6H), 2.45 (s, 3H), 3.12 (s, 3H), 3.60 (m, 2H), 3.96 (t, 2H), 4.88 (m, 2H), 4.98 (m, 1H), 7.04 (d, 1H), 8.14 (s, 1H), 8.18 (d, 1H). MS APCI- m/z 412 [M-H]$

Example 111

1-(2-Isopropoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

\[ \text{Structure Image} \]

The ester of preparation 106 (140mg, 0.32mmol) was dissolved in methanol (2mL) and the solution treated with 1M aqueous sodium hydroxide solution (640µL). The reaction mixture was stirred at room temperature for 18 hours before being concentrated in vacuo. The residue was dissolved in water (20mL), washed with ethyl acetate (10mL), acidified with citric acid and extracted with dichloromethane (2x20mL). The organics were combined, dried over magnesium sulphate and concentrated in vacuo. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol 100:0 to 95:5. The product was triturated with ether to yield the title product as a white solid, 45mg.

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 1.10 (d, 6H), 1.32 (d, 6H), 2.42 (s, 3H), 3.12 (s, 3H), 3.66 (m, 1H), 3.94 (t, 2H), 4.83 (t, 2H), 5.05 (m, 1H), 7.04 (d, 1H), 8.16 (s, 1H), 8.20 (d, 1H). MS ES+ m/z 428 [MH]+
Example 112

(2'R)-5-(N-Isopropyl-N-methylamino)-1-(2'-methoxypropyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The title compound was prepared by a method similar to that described for example 111 using the ester of preparation 105.

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 1.32 (m, 9H), 2.44 (s, 3H), 3.10 (s, 3H), 3.42 (s, 3H), 3.97 (m, 1H), 4.73 (m, 2H), 4.99 (m, 1H), 7.08 (m, 1H), 8.08 (s, 1H), 8.20 (d, 1H).

MS APCI+ m/z 414 [MH$^+$]

Example 113

N-[1-(2-Ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxyl]methanesulfonamide

The chloro compound of preparation 186 (90mg, 0.20mmol), N-methylisopropylamine (73mg, 1.0mmol), N-ethyldiisopropylamine (170µL, 1.0mmol) and caesium fluoride (30mg, 0.20mmol) were dissolved in dimethyl sulphoxide (1mL) and the reaction mixture stirred at 110$^\circ$C for 5 hours. The reaction mixture was allowed to cool and was then diluted with ethyl acetate (10mL) and water (10mL). The organic phase was separated and washed with water (2x10mL), dried over
magnesium sulphate and concentrated in vacuo. The residue was purified twice by column chromatography on silica gel eluting with dichloromethane:methanol 99:1 to 97:3. The crude product was dissolved in ethyl acetate (2mL) and treated with pentane. The precipitate formed was filtered off and dried in vacuo to yield the title product, 42mg.

$^1$H NMR (DMSO-$d_6$ + CF$_3$CO$_2$D, 400MHz) δ: 0.98 (t, 3H), 1.18 (d, 6H), 2.44 (s, 3H), 3.02 (s, 3H), 3.40 (s, 3H), 3.44 (d, 2H), 3.86 (t, 2H), 4.75 (m, 1H), 4.94 (t, 2H), 7.18 (d, 1H), 8.06 (s, 1H), 8.25 (d, 1H). MS ES- m/z 489 [M-H]

**Example 114**

$N$-[5-(Dimethylamino)-1-(2-ethoxyethyl)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

The title product was prepared by a method similar to that described for example 113 using a 33% solution of dimethylamine in ethanol as the source of the $HN$R$^2$R$^4$ amine. 55mg of the desired product was produced.

$^1$H NMR (DMSO-$d_6$ + CF$_3$CO$_2$D, 400MHz) δ: 0.97 (t, 3H), 2.45 (s, 3H), 3.20 (s, 6H), 3.40 (s, 3H), 3.44 (d, 2H), 3.88 (t, 2H), 4.95 (t, 2H), 7.18 (d, 1H), 8.07 (s, 1H), 8.25 (d, 1H), 13.40 (s, 1H). MS ES+ m/z 485 [MNa]$^+$
Example 115

\[ N-[1-(2-Ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide \]

5 The chloro compound of preparation 186 (110mg, 0.24mmol), N-methyl-ethylamine (79mg, 1.2mmol), N-ethyl-diisopropylamine (210μL, 1.20mmol) and caesium fluoride (37mg, 0.24mmol) were dissolved in dimethyl sulphoxide (1mL) and the reaction mixture heated to 110°C for 5 hours in a ReactiVial™. The reaction mixture was partitioned between ethyl acetate (10mL) and water (10mL) and the organic phase separated and washed with water (2x10mL). The organic phase was then dried over magnesium sulphate and concentrated \textit{in vacuo}. The residue was purified by column chromatography on silica gel eluting with dichloromethane:methanol 99:1 to 97:3 to yield the title product as a pale yellow solid, 66mg.

Alternatively, example 115 may be prepared using the carboxylic acid of Example 96. The carboxylic acid of example 96 (1.0g, 2.50mmol), methanesulphonamide (356mg, 3.75mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (1.0g, 5.2mmol) and 4-dimethylaminopyridine (305mg, 2.5mmol) were dissolved in dichloromethane (5mL) and the reaction mixture stirred at room temperature for 16 hours. The reaction mixture was diluted with 10% aqueous citric acid (3mL) and the organic phase was separated, washed with water (3mL), dried over magnesium sulphate and concentrated \textit{in vacuo}.

\(^1\)H NMR (DMSO-\text{D}_6 + CF₃CO₂D, 400MHz) δ: 0.99 (t, 3H), 1.17 (t, 3H), 2.44 (s, 3H), 3.18 (s, 3H), 3.41 (s, 3H), 3.44 (d, 2H), 3.66 (d, 2H), 3.88 (t, 2H), 4.93 (t, 2H), 7.16 (d, 1H), 8.09 (s, 1H), 8.26 (d, 1H). MS ES- m/z 475 [M-H]
Methyl 1-(2-ethoxyethyl)-5-[ethyl(methyl)amino]-7-[(4-fluoro-3-methylphenyl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate

A mixture of the chloride from preparation 92 (200mg, 0.49mmol), N-ethylmethylamine (0.084mL, 0.98mmol) and N-ethyl-diisopropylamine (0.17mL, 0.98mmol) in dimethylsulfoxide (2mL) was heated in a Reactivial® at 120°C for 18 hours. The cooled mixture was concentrated under reduced pressure and the residue partitioned between dichloromethane (100mL) and water (100mL) and the layers separated. The aqueous solution was extracted with further dichloromethane (50mL) and the combined organic solutions were washed with water (100mL), brine (50mL), dried over magnesium sulphate and evaporated under reduced pressure. The crude product was purified by column chromatography on an Isolute® silica gel cartridge using dichloromethane:methanol (100:0 to 95:5) as an elution gradient to provide the title compound as a white crystalline solid, 70mg.

1H NMR (CD3OD, 400MHz) δ: 1.15 (t, 3H), 1.20 (t, 3H), 2.30 (s, 3H), 3.19 (s, 3H), 3.60 (q, 2H), 3.70 (q, 2H), 3.96 (s, 3H), 3.98 (m, 2H), 4.80 (t, 2H), 7.01 (m, 1H), 7.42 (m, 1H), 7.67 (m, 1H).

MS APCI+ m/z 431 [MH]+

Example 117

Methyl 5-(diethylamino)-1-(2-ethoxyethyl)-7-[(4-fluoro-3-methylphenyl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylate
The title compound was obtained as a white crystalline solid from the compound from preparation 92, after re-crystallisation from methanol, following a similar procedure to that described in example 116.

$^1$H NMR (CDCl$_3$, 400MHz) δ: 1.20 (m, 9H), 2.30 (s, 3H), 3.65 (m, 6H), 4.00 (m, 5H), 4.75 (t, 2H), 6.95 (m, 1H), 7.35 (m, 1H), 7.60 (m, 1H).

MS APCI+ m/z 445 [MH]$^+$

**Example 118**

1-(2-Ethoxyethyl)-5-[ethyl(methyl)amino]-7-[(3-methylphenyl)amino]-1$H$-pyrazolo[4,3-\(d\)]pyrimidine-3-carboxylic acid

A mixture of the chloride from preparation 238 (200mg, 0.53mmol), cesium fluoride (81mg, 0.53mmol) and N-ethylmethylamine (0.25mL, 2.65mmol) in dimethylsulphoxide (1.5mL) was heated in a Reactivial® at 110°C for 18 hours. The cooled mixture was partitioned between dichloromethane (50mL) and 1N citric acid solution (100mL) and the layers separated. The aqueous solution was extracted with further dichloromethane (50mL) and the combined organic solutions washed with water (2x100mL) and then brine (50mL). The solution was dried over magnesium
sulphate and concentrated under reduced pressure to provide the title compound as a white solid, 150mg.

$^1$H NMR (400 MHz, CD$_3$OD) $\delta$: 1.10 (t, 3H), 1.25 (t, 3H), 2.40 (s, 3H), 3.25 (s, 3H), 3.65 (q, 2H), 3.75 (q, 2H), 4.00 (t, 2H), 4.85 (t, 2H), 7.10 (d, 1H), 7.35 (m, 1H), 7.50 (d, 1H), 7.61 (s, 1H).

MS APCI+ m/z 399 [MH]$^+$

**Examples 119 to 124**

The following compounds of the general formula shown below:

were prepared from the corresponding chloride compounds from preparations 149, 231, 232 and 237, following a similar procedure to that described in example 118.

A-The product was recrystallised from dichloromethane, then sonicated in ether and dried in vacuo.

**Example 125**

5-(Diethylamino)-1-(2-ethoxyethyl)-7-[(1-methyl-6-oxo-1,6-dihydropyridin-3-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

A mixture of the chloro compound from preparation 239 (170mg, 0.43mmol), diethylamine (0.18mL, 1.73mmol) and cesium fluoride (66mg, 0.43mmol) in dimethylsulphoxide (1mL) was stirred at 110°C for 2 hours. Additional diethylamine
(0.18mL, 1.73mmol) in dimethylsulphoxide (0.5mL) was added, the mixture transferred to a Reactivial® and stirred at 110°C for a further 2 hours. The cooled mixture was diluted with dichloromethane (40mL) and washed with 1M citric acid solution (3x20mL). The combined aqueous solutions were washed with dichloromethane (20mL), then basified to pH 6 using solid sodium bicarbonate. This solution was extracted with dichloromethane (3x30mL) and the combined organic solutions washed with water (20mL) and brine (20mL) then dried (using a phase separation cartridge) and concentrated under reduced pressure. The resulting oil was suspended in water (30mL) and the mixture sonicated for 30 minutes. The resulting solid was filtered off and dried in vacuo to provide the title compound as a solid.

^1^H NMR (CD₃OD, 400MHz) δ: 1.12 (t, 3H), 1.25 (t, 6H), 3.59 (q, 2H), 3.62 (s, 3H), 3.65 (m, 4H), 3.92 (t, 2H), 4.90 (m, 2H), 6.65 (d, 1H), 7.75 (m, 1H), 8.10 (s, 1H).

Example 126

5-[isopropyl(methyl)amino]-7-[4-methylpyridin-2-yl)amino]-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

![Structure](image)

A mixture of the chloride from preparation 233 (75mg, 0.17mmol), N-ethyldiisopropylamine (0.15mL, 0.85mmol), cesium fluoride (26mg, 0.17mmol) and N-methylisopropylamine (0.09mL, 0.85mmol) in 1-methyl-2-pyrrolidinone (1mL) was stirred at 110°C in a Reactivial® for 4 hours. The cooled reaction mixture was purified directly using a Phenomenex Luna C18 reverse phase silica gel column and acetonitrile:95% water/5% methanol/0.1%
trifluoroacetic acid (5:95 to 95:5) as elution gradient. The product was dissolved in dichloromethane and the solution washed with sodium bicarbonate solution, dried over magnesium sulphate and evaporated under reduced pressure to provide the title compound, 24mg.

\[ ^1 \text{H NMR} \begin{array}{c} (\text{CD}_3\text{OD}, 400\text{MHz}) \delta: 1.31 \text{ (d, 6H)}, 2.48 \text{ (s, 3H)}, 3.11 \text{ (s, 3H)}, 3.98 \text{ (q, 2H)}, 4.15 \text{ (t, 2H)}, 4.95 \text{ (m, 1H)}, 4.99 \text{ (t, 2H)}, 7.08 \text{ (d, 1H)}, 8.00 \text{ (s, 1H)}, 8.12 \text{ (d, 1H)}. \end{array} \]

MS ES- m/z 466 [M-H]

Example 127

5-[Ethyl(methyl)amino]-7-[4-methylpyridin-2-yl)amino]-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The title compound was prepared from the compound from preparation 233 and N-ethylmethylamine, following a similar procedure to that described in example 126, except only 2 equivalents of N-ethylmethylamine and N-ethylidiosopropylamine were used.

\[ ^1 \text{H NMR} \begin{array}{c} (\text{CD}_3\text{OD}, 400\text{MHz}) \delta: 1.30 \text{ (t, 3H)}, 2.49 \text{ (s, 3H)}, 3.26 \text{ (s, 3H)}, 3.73 \text{ (q, 2H)}, 3.98 \text{ (q, 2H)}, 4.16 \text{ (t, 2H)}, 4.98 \text{ (t, 2H)}, 7.05 \text{ (d, 1H)}, 8.00 \text{ (s, 1H)}, 8.10 \text{ (d, 1H)}. \end{array} \]

Example 128
5-(Diethylamino)-7-[(4-methylpyridin-2-yl)amino]-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

A mixture of the chloride from preparation 233 (100mg, 0.23mmol), cesium fluoride (35mg, 0.23mmol) and diethylamine (0.07mL, 0.69mmol) in dimethylsulphoxide (1mL) was stirred at 120°C in a Reactivial® for 18 hours. TLC analysis showed starting material remaining, so additional diethylamine (0.07mL, 0.69mmol) was added and the reaction heated for a further 3 hours at 135°C. The cooled mixture was suspended in 1M citric acid solution (200mL) and extracted with dichloromethane (3x50mL). The combined organic extracts were washed with water (50mL), brine (25mL) and dried over sodium sulphate then concentrated under reduced pressure. The crude product was purified by column chromatography using a silica gel Isolute® cartridge and an elution gradient of 10% acetic acid in methanol:dichloromethane: (1:99 to 7:93). The product was triturated with ether and dried in vacuo to afford the title compound as a yellow powder, 44mg.

^H NMR (CD₃OD, 400MHz) δ: 1.35 (t, 6H), 2.50 (s, 3H), 3.70 (q, 4H), 4.00 (q, 2H), 4.18 (t, 2H), 5.00 (t, 2H), 7.10 (d, 1H), 8.05 (s, 1H), 8.13 (d, 1H).

MS ES+ m/z 468 [MH]^+

Example 129
7-[(4-Methylpyridin-2-yl)amino]-5-(2-methylpyrrolidin-1-yl)-1-[[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

\text{O} \quad \text{OH}
\]

The title compound was obtained as a solid in 45% yield from 2-methylpyrrolidine and the chloride from preparation 233, following the procedure described in example 128.

\(^1\)H NMR (CD\(_3\)OD, 400MHz) \(\delta\): 1.38 (d, 3H), 1.85 (m, 1H), 2.10 (m, 1H), 2.25 (m, 2H), 2.50 (s, 3H), 3.60 (m, 1H), 3.79 (m, 1H), 3.98 (q, 2H), 4.15 (t, 2H), 4.45 (m, 1H), 5.00 (t, 2H), 7.10 (d, 1H), 7.98 (s, 1H), 8.15 (d, 1H).

MS ES\(^+\) m/z 480 [MH]\(^+\)

Example 130

5-[Cyclobutyl(methyl)amino]-7-[(4-methylpyridin-2-yl)amino]-1-[[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid

The title compound was obtained in 42% yield as a yellow solid, from the amine from preparation 241 and the chloro compound from preparation 233, following a similar
procedure to that described in example 128, except 5 eq N-ethylidniosopropylamine was also added.

$^1$H NMR (CD$_3$OD, 400MHz) $\delta$: 1.80 (m, 2H), 2.35 (m, 4H), 2.50 (s, 3H), 3.21 (s, 3H), 3.99 (q, 2H), 4.18 (t, 2H), 4.80 (m, 1H), 4.99 (t, 2H), 7.10 (d, 1H), 8.05 (s, 1H), 8.18 (d, 1H).

MS APCI+ m/z 480 [MH]$^+$

A solution of the appropriate esters from preparations 240-242 (0.5mmol) in sodium hydroxide (1N, 4mL, 4mmol) and dioxan (2 mL) was stirred at room temperature for 18 hours. The solution was concentrated under reduced pressure and the residue partitioned between dichloromethane (20mL) and 1M citric acid solution (10mL). The layers were separated and the organic phase dried over magnesium sulphate and evaporated under reduced pressure to give the title compounds.

Example 135

5-[Isopropyl(methyl)amino]-1-[(2S)-2-methoxypropyl]-7-[(4-methylpyridin-2-yl)amino]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid
A solution of the ester from preparation 260 (43mg, 0.1mmol) in dioxan (2mL) and sodium hydroxide (1N, 4mL) was stirred at room temperature for 18 hours. The mixture was concentrated under reduced pressure and the residue diluted with citric acid solution (1M, 50mL). This solution was extracted with dichloromethane (3x50mL), the combined organic solutions washed with sodium bicarbonate solution (3x15mL), dried over magnesium sulphate and evaporated under reduced pressure. The crude product was purified by column chromatography using an Isolute® silica gel cartridge and an elution gradient of dichloromethane:methanol (100:0 to 94:6) to give a yellow oil. This was triturated with ether and the resulting solid filtered off and dried to give the title compound as a white solid, 26mg.

^H NMR (CD3OD,400MHz) δ: 1.30 (m, 9H), 2.42 (s, 3H), 3.10 (s, 3H), 3.43 (s, 3H), 4.00 (m, 1H), 4.75 (m, 2H), 4.99 (m, 1H), 7.02 (d, 1H), 8.08 (s, 1H), 8.10 (d, 1H).

MS APCl+ m/z 414 [MH]^+

Examples 136 to 140
A solution of the appropriate esters from preparations 245-249 (1eq) in sodium hydroxide (1N, 1.5-3eq) and dioxan (6.5-7.5 mLmmol⁻¹) was stirred at room temperature for 18 hours. The solution was concentrated under reduced pressure and the residue partitioned between dichloromethane and 1M citric acid solution and the layers separated. The aqueous phase was extracted with additional dichloromethane, the combined organic solutions dried over magnesium sulphate and evaporated under reduced pressure. The products were triturated with ethyl acetate, and the solids filtered and dried to afford the title compounds as white crystalline solids.

A-crude compounds were purified by column chromatography on an Isolute® silica gel cartridge using dichloromethane:methanol as eluant.

B—an additional 0.5eq of sulphonamide and 4-dimethylaminopyridine were added after 18 hours, and the reaction stirred for a further 6 hours.

C—1.5 eq of 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride, 4-dimethylaminopyridine and ethylsulphonamide were used.

D—the compound was isolated after trituration with methanol.

E—4-dimethylaminopyridine (0.5eq), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (2eq) and the appropriate sulphonamide (2eq) were used.

**Examples 165 to 171**

4-Dimethylaminopyridine (1.3 eq) was added to a solution of the appropriate acid from examples 20 and 131-133 (1eq), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (1.3eq) and the appropriate sulphonamide (1.2-1.3eq) in dichloromethane (13-30mLmmol⁻¹) and the reaction stirred at room temperature for 18 hours. The mixture was washed with 1M citric acid solution (5mL), the organic phase separated and purified directly by column chromatography on silica gel using an elution gradient of dichloromethane:methanol (100:0 to 95:5) to afford the title compounds as yellow solids.

Example 178

5-[Ethyl(methyl)amino]-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide
A mixture of the chloride from preparation 261 (50mg, 0.1mmol), N-ethyl-diisopropylamine (0.05mL, 0.3mmol), N-ethylmethylamine (0.026mL, 0.3mmol) and cesium fluoride (15mg, 0.1mmol) in 1-methyl-2-pyrrolidinone (1mL) was heated in a Reactivial® at 110°C for 90 minutes. The cooled reaction mixture was purified directly using a Phenomenex Luna C18 column reverse phase column and acetonitrile:95% water/5% methanol/0.1% trifluoroacetic acid (5:95 to 95:5) as elution gradient. The product was dissolved in dichloromethane and the solution washed with sodium bicarbonate solution, dried over magnesium sulphate and evaporated under reduced pressure to provide the title compound, 24mg.

Alternatively, example 178 may be prepared by the method of examples 172-177. 4-Dimethylaminopyridine (22mg, 0.20mmol) was added to a solution of the acid from example 127 (70mg, 0.15mmol), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (38mg, 0.20mmol) and methanesulphonamide (19mg, 0.20mmol) in dichloromethane (2ml) and the reaction stirred at room temperature for 18 hours. The mixture was diluted with dichloromethane (20mls) and 1M citric acid solution (10ml), then the phases separated. The organic phase was purified directly by column chromatography on silica gel (using a Parallel Flashmaster system) using an elution gradient of methanol:dichloromethane (0:100 to 2:98) to provide the title compound as a yellow solid.
\(^1\)H NMR (DMSO-\(D_6\) + 1 drop TFA\(_d\), 400MHz) \(\delta\): 1.19 (t, 3H), 2.49 (s, 3H), 3.20 (s, 3H), 3.41 (s, 3H), 3.66 (q, 2H), 4.06 (q, 2H), 4.14 (t, 2H), 5.03 (t, 2H), 7.20 (d, 1H), 8.12 (s, 1H), 8.27 (d, 1H).

5-[Isopropyl(methyl)amino]-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1-[2-(2,2,2-trifluoroethoxy)ethyl]-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

The title compound was obtained from the chloride from preparation 261 and N-methylisopropylamine, following the procedure described in example 178.

\(^1\)H NMR (DMSO-\(D_6\) + 1 drop TFA\(_d\), 400MHz) \(\delta\): 1.20 (d, 6H), 2.49 (s, 3H), 3.03 (s, 3H), 3.41 (s, 3H), 4.08 (q, 2H), 4.15 (t, 2H), 4.78 (m, 1H), 5.03 (t, 2H), 7.20 (d, 1H), 8.10 (s, 1H), 8.26 (d, 1H).

MS ES- m/z 543 [M-H]

**Examples 180 to 182**
Sodium hydroxide solution (1M, 1mL, 1mmol) was added to a solution of the appropriate ester from preparation 250-252 (0.33mmol) in dioxan (3mL) and the solution stirred at room temperature for 18 hours. The reaction was evaporated under reduced pressure and the mixture partitioned between dichloromethane (50mL) and 1M citric acid solution. The layers were separated and the organic solution dried over magnesium sulphate and evaporated under reduced pressure. The product was dissolved in dichloromethane (5mL) and 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (82mg, 0.43mmol), methanesulphonamide (41mg, 0.43mmol) and 4-dimethylaminopyridine (48mg, 0.43mmol) added and the reaction stirred at room temperature for 72 hours. The mixture was diluted with dichloromethane (10mL), 1M citric acid solution and the mixture stirred for 30 minutes. The phases were separated and the organic solution purified directly by column chromatography on silica gel using dichloromethane:methanol (98:2) as eluant to afford the title compounds.

\text{Example 183}

5-(Diethylamino)-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1-(2-propoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

A mixture of the chloride from preparation 67 (135mg, 0.33mmol), cesium fluoride (50mg, 0.33mmol) and diethyamine (103\mu L, 1mmol) in dimethylsulphoxide (1mL) was heated in a Reactivial® at 120°C for 18 hours. The cooled mixture was partitioned between dichloromethane (20mL) and water (20mL) and the layers separated. The organic phase was washed with water (2x10mL), dried over magnesium sulphate and evaporated under reduced pressure. Sodium hydroxide solution (1M, 0.5mL, 0.5mmol) and dioxan (1mL) were added to the residue and the
solution stirred at room temperature for 18 hours. The reaction was evaporated under reduced pressure and the mixture partitioned between dichloromethane (20mL) and 1M citric acid solution (2mL) and water (20mL). The layers were separated and the organic solution dried over magnesium sulphate and evaporated under reduced pressure. The product was dissolved in dichloromethane (5mL) and 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (82mg, 0.43mmol), methanesulphonamide (41mg, 0.43mmol) and 4-dimethylaminopyridine (48mg, 0.43mmol) added and the reaction stirred at room temperature for 18 hours. The mixture was diluted with dichloromethane (30mL), washed with 1M citric acid solution (5mL) then dried over magnesium sulphate and evaporated under reduced pressure. The crude product was purified by column chromatography on silica gel using dichloromethane:methanol (100:0 to 97:3) as eluant to afford the title compound, 75mg.

^1H NMR (DMSO-d_6 +TFA/d, 400MHz) δ: 0.62 (t, 3H), 1.20 (t, 6H), 1.40 (m, 2H), 2.41 (s, 3H), 3.38 (t, 2H), 3.41 (s, 3H), 3.60 (m, 4H), 3.85 (t, 2H), 4.90 (m, 2H), 7.14 (d, 1H), 8.05 (s, 1H), 8.24 (d, 1H).

MS APCI+ m/z 505 [MH]^+

**Example 184**

5-[Isopropyl(methyl)amino]-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1-(2-propoxyethyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

![Chemical Structure](image)

The title compound was obtained in 51% yield as a yellow solid, from the chloride of preparation 67, following a similar procedure to that described in example 183.
Example 185

5-[Ethyl(methyl)amino]-1-(2-hydroxyethyl)-7-[(4-methylpyridin-2-yl)amino]-N-(methylsulfonyl)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxamide

Boron tribromide (1M in dichloromethane, 1.95mL, 1.95mmol) was added dropwise to a solution of the compound from example 119 (100mg, 0.22mmol) in dichloromethane (5mL) cooled to -25°C, so as to maintain the temperature below -20°C. The reaction was stirred at -25°C for 3 hours, then quenched by the dropwise addition of saturated sodium bicarbonate solution until pH 7 was achieved. The mixture was allowed to warm to room temperature, then partitioned between water (10mL) and dichloromethane (20mL). The organic phase was washed with water, dried over magnesium sulphate and evaporated under reduced pressure to provide the title compound as a yellow solid, 31mg.

1H NMR (CD3OD + drop TFAd, 400MHz) δ: 1.31 (t, 3H), 2.54 (s, 3H), 3.30 (s, 3H), 3.41 (s, 3H), 3.76 (q, 2H), 4.08 (t, 2H), 4.98 (t, 2H), 7.19 (d, 1H), 8.04 (s, 1H), 8.15 (d, 1H).

MS m/z 449 [MH]+
Assay

The compounds of the invention are inhibitors of cyclic guanylate monophosphate (cGMP)-specific phosphodiesterase type 5 (PDE-5 inhibitors). Preferred compounds suitable for use in accordance with the present invention are potent and selective PDE5 inhibitors. In vitro PDE inhibitory activities against cyclic guanosine 3',5'-monophosphate (cGMP) and cyclic adenosine 3',5'-monophosphate (cAMP) phosphodiesterases can be determined by measurement of their IC_{50} values (the concentration of compound required for 50% inhibition of enzyme activity).

The required PDE enzymes can be isolated from a variety of sources, including human corpus cavernosum, human and rabbit platelets, human cardiac ventricle, human skeletal muscle and bovine retina, essentially by a modification of the method of Thompson, WJ et al.; Biochemistry 18(23), 5228-5237, 1979, as described by Ballard SA et al.; J. Urology 159(6), 2164-2171, 1998. In particular, cGMP-specific PDE5 and cGMP-inhibited cAMP PDE3 can be obtained from human corpus cavernosum tissue, human platelets or rabbit platelets; cGMP-stimulated PDE2 was obtained from human corpus cavernosum; calcium/calmodulin (Ca/CAM)-dependent PDE1 from human cardiac ventricle; cAMP-specific PDE4 from human skeletal muscle; and photoreceptor PDE6 from bovine retina. Phosphodiesterases 7-11 can be generated from full length human recombinant clones transfected into SF9 cells.

Assays can be performed either using a modification of the “batch” method of Thompson WJ and Appleman MM; Biochemistry 10(2),311-316, 1971, essentially as described by Ballard SA et al.; J. Urology 159(6), 2164-2171, 1998, or using a scintillation proximity assay for the direct detection of [³H]-labelled AMP/GMP using a modification of the protocol described by Amersham plc under product code TRKQ7090/7100. In summary, for the scintillation proximity assay the effect of PDE inhibitors was investigated by assaying a fixed amount of enzyme in the presence of varying inhibitor concentrations and low substrate, (cGMP or cAMP in a 3:1 ratio
unlabelled to [3H]-labeled at a concentration of ~1/3 $K_m$ or less) such that $IC_{50} = K_i$. The final assay volume was made up to 100μl with assay buffer [20mM Tris-HCl pH 7.4, 5mM MgCl$_2$, 1mg/ml bovine serum albumin]. Reactions were initiated with enzyme, incubated for 30-60min at 30°C to give <30% substrate turnover and terminated with 50μl yttrium silicate SPA beads (containing 3mM of the respective unlabelled cyclic nucleotide for PDEs 9 and 11). Plates were re-sealed and shaken for 20min, after which the beads were allowed to settle for 30min in the dark and then counted on a TopCount plate reader (Packard, Meriden, CT). Radioactivity units were converted to % activity of an uninhibited control (100%), plotted against inhibitor concentration and inhibitor $IC_{50}$ values obtained using the ‘Fit Curve’ Microsoft Excel extension.

All compounds of the invention have an activity against PDE-5 of less than 10,000nM. $IC_{50}$ values for representative compounds are listed in the table below.

Claims

1. A compound of formula (I)

wherein

R¹ is a cyclic group selected from R⁴, R⁶, R⁸ and R⁹, each of which is optionally substituted with one or more R⁷ groups;

R² is hydrogen or C₁-C₂ alkyl;

R³ and R⁴ are each independently C₁-C₆ alkyl, C₂-C₆ alkenyl, C₂-C₆ alkynyl or C₃-C₁₀ cycloalkyl, each of which is optionally substituted with one or more R⁸ groups, or R⁸, which is optionally substituted with one or more R⁹ groups, or hydrogen;

or -NR³R⁴ forms R⁷, which is optionally substituted with one or more R¹⁰ groups;

R⁵ is selected from -Y-CO₂R¹⁵ and -Y-R¹⁶;

R⁶, which may be attached at N¹ or N², is C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₂-C₆ alkenyl or C₂-C₆ alkynyl, each of which is optionally substituted by C₁-C₆ alkoxy, C₁-C₆ haloalkoxy or a cyclic group selected from R⁷, R⁸ and R⁹, or R⁶ is R⁸, C₃-C₇ cycloalkyl or C₃-C₇ halocycloalkyl, each of which is optionally substituted by C₁-C₆ alkoxy or C₁-C₆ haloalkoxy, or R⁶ is hydrogen;
R^7 is halo, C_{1-6} alkyl, C_{1-6} haloalkyl, C_{2-6} alkenyl, C_{2-6} alkynyl, C_{3-10} cycloalkyl, C_{2-10} halocycloalkyl, phenyl, OR^{12}, OC(O)R^{12}, NO_2, NR^{12}R^{13}, NR^{12}C(O)R^{13}, NR^{12}CO_2R^{14}, C(O)R^{12}, CO_2R^{12}, CONR^{12}R^{13} or CN;

R^8 is halo, phenyl, C_{1-6} alkoxyphenyl, OR^{12}, OC(O)R^{12}, NO_2, NR^{12}R^{13}, NR^{12}C(O)R^{13}, NR^{12}CO_2R^{14}, C(O)R^{12}, CO_2R^{12}, CONR^{12}R^{13}, CN, C_{3-6} cycloalkyl, R^9 or R^H, the last two of which are optionally substituted with one or more R^3 groups;

R^9 is C_{1-6} alkyl, C_{1-6} haloalkyl or CO_2R^{12};

R^{10} is halo, C_{3-10} cycloalkyl, C_{2-10} halocycloalkyl, phenyl, OR^{12}, OC(O)R^{12}, NO_2, NR^{12}R^{13}, NR^{12}C(O)R^{13}, NR^{12}CO_2R^{14}, C(O)R^{12}, CO_2R^{12}, CONR^{12}R^{13}, CN, oxo, C_{1-6} alkyl or C_{1-6} haloalkyl, the last two of which are optionally substituted by R^{11};

R^{11} is phenyl, NR^{12}R^{13} or NR^{12}CO_2R^{14};

R^{12} and R^{13} are each independently hydrogen, C_{1-6} alkyl or C_{1-6} haloalkyl;

R^{14} is C_{1-6} alkyl or C_{1-6} haloalkyl;

R^{15} is hydrogen or C_{1-6} alkyl optionally substituted with one or more groups selected from halo, OH, C_{1-6} alkoxy, NH_2, NH(C_{1-6}alkyl) and N(C_{1-6}alkyl);2

R^{16} is a carboxylic acid isostere selected from tetrazol-5-yl, 5-trifluoromethyl-1,2,4-triazol-3-yl, 5-(methylsulfonyl)-1,2,4-triazol-3-yl, 2,5-dihydro-5-oxo-1,2,4-oxadiazol-3-yl, -SO_2NHR^{17} and –CONHR^{18};

R^{17} is selected from C_{1-6} alkyl, phenyl, -CO-(C_{1-6} alkyl) and –CO-phenyl;

R^{18} is selected from –SO_2-(C_{1-6} alkyl) and –SO_2-phenyl;
R^k and R^l are each independently a C_5-C_{10} cycloalkyl or C_5-C_{10} cycloalkenyl group, each of which may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic and which may be fused to either

(a) a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or

(b) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R^a and R^b are each independently a phenyl or naphthyl group, each of which may be fused to

(a) a C_5-C_6 cycloalkyl or C_5-C_6 cycloalkenyl ring,

(b) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or

(c) a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R^c, R^d and R^n are each independently a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated or partly unsaturated ring system containing between 3 and 10 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur, which ring may be fused to a C_5-C_6 cycloalkyl or C_5-C_6 cycloalkenyl group or a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

R^o and R^m are each independently a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur, which ring may further be fused to

(a) a second 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur;

(b) C_5-C_6 cycloalkyl or C_5-C_6 cycloalkenyl ring;
(c) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur; or

(d) a benzene ring;

R⁶, R⁷ and R⁸ are each independently a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R⁹ is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur; and

Y is a covalent bond, \(-\text{CH}_2\text{-O-CH}_2\text{-}\), C₃-C₆ alkylenyl or C₅-C₇ cycloalkylenyl;

a tautomer thereof or a pharmaceutically acceptable salt, or solvate of said compound or tautomer.

2. A compound according to claim 1 wherein R¹ is R⁴, which is optionally substituted with one or more R⁷ groups; and

R⁴ is a C₃-C₁₀ cycloalkyl group, which may be either monocyclic or, when there are an appropriate number of ring atoms, polycyclic, which may be fused to either

(a) a monocyclic aromatic ring selected from a benzene ring and a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur, or

(b) a 5-, 6- or 7-membered heteroalicyclic ring containing up to three heteroatoms selected from nitrogen, oxygen and sulphur.

3. A compound according to claim 2 wherein R⁴ is a monocyclic C₃-C₆ cycloalkyl group.
4. A compound according to claim 3 wherein R^4 is a monocyclic C_6-C_7 cycloalkyl group.

5. A compound according to claim 4 wherein R^4 is cyclopentyl or cyclohexyl.

6. A compound according to claim 1 wherein R^1 is R^5, which is optionally substituted with one or more R^7 groups.

7. A compound according to claim 6 wherein R^8 is phenyl.

8. A compound according to claim 1 wherein R^1 is R^2, which is optionally substituted with one or more R^7 groups.

9. A compound according to claim 8 wherein R^5 is a monocyclic saturated or partly unsaturated ring system containing between 3 and 8 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

10. A compound according to claim 9 wherein R^5 is a monocyclic saturated or partly unsaturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

11. A compound according to claim 10 wherein R^5 is a monocyclic saturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

12. A compound according to claim 1 wherein R^1 is R^5, which is optionally substituted with one or more R^7 groups.

13. A compound according to claim 12 wherein R^5 is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur.
14. A compound according to claim 13 wherein $R^0$ is a 5-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur and optionally up to two further nitrogen atoms in the ring, or a 6-membered heteroaromatic ring including 1, 2 or 3 nitrogen atoms.

15. A compound according to claim 14 wherein $R^0$ is furanyl, thienyl, pyrrolyl, pyrazolyl, imidazolyl, isoxazolyl, oxazolyl, isothiazolyl, thiazolyl, oxadiazolyl, pyridyl, pyridazinyl, pyrimidyl or pyrazinyl.

16. A compound according to claim 15 wherein $R^0$ is pyrazolyl, imidazolyl, isoxazolyl, oxazolyl, oxadiazolyl, pyridyl, pyridazinyl, pyrimidyl or pyrazinyl.

17. A compound according to any one of claims 1 to 16 wherein $R^1$ is halo, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ haloalkyl, OR, or CONR$^2$R$^3$.

18. A compound according to claim 17 wherein $R^1$ is halo, $C_1$-$C_3$ alkyl, $C_1$-$C_3$ alkoxy, hydroxy or CONH($C_1$-$C_3$ alkyl).

19. A compound according to claim 18 wherein $R^1$ is fluoro, methyl, ethyl, hydroxy, methoxy, propoxy or CONHMe.

20. A compound according to any one of claims 1 to 19 wherein $R^2$ is hydrogen or methyl.

21. A compound according to claim 20 wherein $R^2$ is hydrogen.

22. A compound according to any one of claims 1 to 21 wherein $R^3$ is hydrogen, $C_1$-$C_6$ alkyl, which is optionally substituted with one or more $R^6$ groups, or $R^6$, which is optionally substituted with one or more $R^7$ groups; and wherein $R^8$ is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring
system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

23. A compound according to claim 22 wherein R³ is hydrogen, C₁-C₄ alkyl, which is optionally substituted with one or more R⁶ groups, or R⁸, which is optionally substituted with one or more R⁶ groups; and wherein R⁸ is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.

24. A compound according to claim 23 wherein R³ is R⁸, which is optionally substituted with one or more R⁶ groups and wherein R⁸ is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom.

25. A compound according to claim 24 wherein R⁸ is azetidinyl, pyrrolidinyl or piperidinyl.

26. A compound according to claim 23 wherein R³ is C₁-C₄ alkyl, which is optionally substituted with one or more R⁶ groups and wherein R⁸ is halo, phenyl, C₁-C₂ alkoxyphenyl, OR¹², NR¹²R¹³, NR¹²CO₂R¹⁴, CO₂R¹², CONR¹²R¹³, R⁹ or R¹⁰, the last two of which are optionally substituted with one or more R⁶ groups.

27. A compound according to claim 26 wherein R⁸ is hydroxy, methoxy, methoxyphenyl, NH₂, NHMe, NMe₂, NHCO₂Bu, NMeCO₂Bu, CO₂H, CONHMe, R⁶ or R¹⁰, the last two of which are optionally substituted with one or more R⁶ groups.

28. A compound according to claim 27 wherein R⁸ is R⁶, which is optionally substituted with one or more R⁶ groups and wherein R⁶ is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur.
29. A compound according to claim 28 wherein R⁵ is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom and optionally one oxygen atom.

30. A compound according to claim 29 wherein R⁵ is pyrrolidinyl, piperidinyl or morpholinyl.

31. A compound according to claim 27 wherein R⁶ is R¹, which is optionally substituted with one or more R³ groups and wherein R¹ is a 5- or 6-membered heteroaromatic ring containing up to two nitrogen atoms.

32. A compound according to claim 31 wherein R¹ is pyrazolyl.

33. A compound according to any one of claims 22 to 32 wherein R⁸ is methyl or CO₂Bu.

34. A compound according to claim 23 wherein R¹ is hydrogen or C₁-C₄ alkyl, which is optionally substituted with one or more R³ groups, or R¹ is azetidinyl, pyrrolidinyl or piperidinyl, each of which is optionally substituted with one or more R³ groups, wherein

R³ is hydroxy, methoxy, methoxyphenyl, NH₂, NHMe, NMe₂, NHCO₂Bu, NMeCO₂Bu, CO₂H, CONHMe, pyrrolidinyl, piperidinyl, morpholinyl or pyrazolyl, the last four of which are optionally substituted with one or more R⁸ groups and wherein R⁸ is methyl or CO₂Bu.

35. A compound according to any one of claims 1 to 34 wherein R¹ is hydrogen, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₂-C₆ alkenyl or C₂-C₆ alkynyl.

36. A compound according to claim 35 wherein R¹ is hydrogen, C₁-C₆ alkyl or C₁-C₆ haloalkyl.
37. A compound according to claim 36 wherein R⁴ is hydrogen, methyl or ethyl.

38. A compound according to any one of claims 1 to 21 wherein –NR²R¹ forms R⁶, which is optionally substituted with one or more R¹⁰ groups and wherein R⁶ is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing at least one nitrogen atom and optionally one other atom selected from oxygen and sulphur.

39. A compound according to claim 38 wherein R⁶ is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing one or two nitrogen atoms and optionally one other atom selected from oxygen and sulphur.

40. A compound according to claim 39 wherein R⁶ is selected from azetidinyl, pyrrolidinyl, piperidinyl, piperazinyl, morpholinyl, 3-azabicyclo[3.1.0]hex-3-yl, homopiperazinyl, 2,5-diazabicyclo[4.3.0]non-2-yl, 3,8-diazabicyclo[3.2.1]oct-3-yl, 3,8-diazabicyclo[3.2.1]oct-8-yl, 2,5-diazabicyclo[2.2.1]hept-2-yl, 1,4-diazabicyclo[4.3.0]non-4-yl and 1,4-diazabicyclo[3.2.2]non-4-yl.

41. A compound according to any one of claims 38 to 40 wherein R¹⁰ is halo, OR¹², NR¹²R¹³, NR¹²CO₂R¹⁴, CO₂R¹³, oxo, C₁-C₆ alkyl or C₁-C₆ haloalkyl, the last two of which are optionally substituted by R¹¹.

42. A compound according to claim 41 wherein R¹⁰ is halo, methyl, ethyl, isopropyl, hydroxy, methoxy, NH₂, NHMe, NMe₂, NHCO₂Bu, CO₂H, CO₂Bu, oxo, benzyl, -CH₂NH₂, -CH₂NHMe, CH₂NMe₂ or -CH₂NMeCO₂Bu.

43. A compound according to any one of claims 1 to 42 wherein R⁶ is –Y-CO₂R¹⁵.

44. A compound according to claim 43 wherein R¹⁵ is hydrogen or C₁-C₅ alkyl and Y is a covalent bond.
45. A compound according to any one of claims 1 to 42 wherein R⁶ is -Y-R¹⁶.

46. A compound according to claim 45 wherein R¹⁶ is -CONHR¹⁸, tetrazol-5-yl or 2,5-dihydro-5-oxo-1,2,4-oxadiazol-3-yl and Y is a covalent bond or a methylene group.

47. A compound according to any one of claims 1 to 46 wherein R⁶ is positioned on N¹.

48. A compound according to any one of claims 1 to 47 wherein R⁶ is C₁-C₆ alkyl or C₁-C₆ haloalkyl, each of which is optionally substituted by C₁-C₆ alkoxy, C₁-C₆ haloalkoxy or a cyclic group selected from R¹, R¹ and R⁴, or R⁶ is R¹ or hydrogen; R¹ is a C₂-C₅ monocyclic cycloalkyl group; R¹ and R¹ are each independently a monocyclic, saturated or partly unsaturated ring system containing between 4 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur; and R⁴ is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur.

49. A compound according to claim 48 wherein R⁶ is C₁-C₄ alkyl or C₁-C₄ haloalkyl, each of which is optionally substituted by C₁-C₄ alkoxy, C₁-C₄ haloalkoxy or a cyclic group selected from R¹, R¹ and R⁴, or R⁶ is R¹ or hydrogen; R¹ is cyclopropyl or cyclobutyl; R¹ and R¹ are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur; and R⁴ is a 5- or 6-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur.
50. A compound according to claim 49 wherein R^6 is C_1-C_4 alkyl or C_1-C_4 haloalkyl, each of which is optionally substituted by C_1-C_4 alkoxy or a cyclic group selected from R^4, R^5 and R^6, or R^6 is R^9 or hydrogen; R^7 is cyclopropyl or cyclobutyl; R^L and R^N are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms containing one heteroatom selected from nitrogen, oxygen and sulphur; and R^M is a 5- or 6-membered heteroaromatic ring containing one nitrogen atom.

51. A compound according to claim 50 wherein R^6 is C_1-C_4 alkyl or C_1-C_4 haloalkyl, each of which is optionally substituted by C_1-C_4 alkoxy, cyclopropyl, cyclobutyl, tetrahydrofuranyl, tetrahydropyranyl or pyridinyl, or R^6 is hydrogen or tetrahydropyranyl.

52. A compound according to claim 51 wherein R^6 is hydrogen, methyl, ethyl, isopropyl, isobutyl, methoxyethyl, methoxypropyl, ethoxyethyl, ethoxypropyl, propoxyethyl, 2,2,2-trifluoroethyl, tetrahydrofuranyl methyl, tetrahydropyranyl methyl, tetrahydropyranyl or pyridinyl methyl.

53. A compound according to claim 1 wherein

R^3 is hydrogen, C_1-C_4 alkyl, which is optionally substituted with one or more R^8 groups, or R^5, which is optionally substituted with one or more R^8 groups;

R^4 is hydrogen, C_1-C_5 alkyl or C_1-C_6 haloalkyl;

or −NR^3R^4 forms R^5, which is optionally substituted with one or more R^10 groups;

R^6 is C_1-C_4 alkyl or C_1-C_4 haloalkyl, each of which is optionally substituted by C_1-C_4 alkoxy, C_1-C_4 haloalkoxy or a cyclic group selected from R^4, R^5 and R^6, or R^6 is R^9 or hydrogen;
R⁴ is a monocyclic C₃-C₄ cycloalkyl group;

R⁵ is phenyl;

R⁶ is a monocyclic saturated or partly unsaturated ring system containing between 3 and 8 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R⁷ is a 5- or 6-membered heteroaromatic ring containing up to three heteroatoms independently selected from nitrogen, oxygen and sulphur;

R⁸ is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R⁹ is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R¹⁰ is cyclopropyl or cyclobutyl;

R¹ and R¹² are each independently a monocyclic saturated ring system containing either 5 or 6 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

R¹³ is a 5- or 6-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur; and

Y is a covalent bond or C₁-C₆ alkylenyl.
54. A compound according to claim 53 wherein \( R^7 \) is a cyclic group selected from \( R^A, R^B, R^C \) and \( R^D \), each of which is optionally substituted with one or more \( R^7 \) groups;

\( R^7 \) is halo, \( C_1-C_6 \) alkyl, \( C_1-C_6 \) haloalkyl, \( OR^{12} \) or \( CONR^{12}R^{13} \);

\( R^8 \) is halo, phenyl, \( C_1-C_6 \) alkoxynaphthyl, \( OR^{12} \), \( NR^{12}R^{13} \), \( NR^{12}CO_2R^{14} \), \( CO_2R^{12} \), \( CONR^{12}R^{13} \), \( R^8 \) or \( R^H \), the last two of which are optionally substituted with one or more \( R^8 \) groups;

\( R^A \) is a monocyclic \( C_5-C_7 \) cycloalkyl group;

\( R^B \) is phenyl;

\( R^C \) is a monocyclic saturated ring system containing between 5 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;

\( R^D \) is a 5-membered heteroaromatic ring containing a heteroatom selected from nitrogen, oxygen and sulphur and optionally up to two further nitrogen atoms in the ring, or a 6-membered heteroaromatic ring including 1, 2 or 3 nitrogen atoms;

\( R^E \) is a monocyclic saturated ring system containing between 3 and 7 ring atoms containing one nitrogen atom;

\( R^F \) is a monocyclic or, when there are an appropriate number of ring atoms, polycyclic saturated ring system containing between 3 and 10 ring atoms containing at least one nitrogen atom and optionally one other atom selected from oxygen and sulphur;

\( R^G \) is a monocyclic saturated ring system containing between 3 and 7 ring atoms, of which at least one is a heteroatom selected from nitrogen, oxygen and sulphur;
$R^i$ is a 5- or 6-membered heteroaromatic ring containing up to two nitrogen atoms; and

$Y$ is a covalent bond or $-\text{CH}_2-$. 

55. A compound according to claim 1 selected from:

- methyl $5-((1S,4S)-2,5$-diazabicyclo[2.2.1]hept-2-yl$)-1-(2$-ethoxyethyl$)-7$-(4$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylate, 

- methyl $1-(2$-ethoxyethyl$)-5$-(N-isopropyl$-N$-methylamino$)-7$-(6$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylate, 

- ethyl $1-(2$-ethoxyethyl$)-5$-(N-ethyl$-N$-methylamino$)-7$-(4$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylate, 

- 2-(dimethylamino)ethyl $5$-dimethylamino$-1-(2$-ethoxyethyl$)-7$-(4$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylate, 

- $1-(2$-ethoxyethyl$)-5$-(N-methyl$-N$-propylamino$)-7$-(4$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid, 

- $5$-(N-isopropyl$-N$-methylamino$)-7$-(4$-methyl$pyridin-2$-ylamino)-1-(2-propoxy-ethyl)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid, 

- $7$-(4,6-dimethylpyridin-2-ylamino)-1-(2$-ethoxyethyl$)-5$-(N-isopropyl$-N$-methyl-amino$)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid, 

- $5$-(N-cyclobutyl$-N$-methylamino$)-1-(2$-ethoxyethyl$)-7$-(4$-methyl$pyridin-2$-ylamino)-1$H$-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,
1-(2-ethoxyethyl)-5-isopropylamino-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(2-methoxypyrimidin-4-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

3-[1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]-2H-1,2,4-oxadiazol-5-one,

3-[1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidin-3-yl]-2H-1,2,4-oxadiazol-5-one,

1-(2-ethoxyethyl)-7-(4-fluoro-3-methylphenylamino)-5-(N-isopropyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-fluoro-3-methylphenylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

7-(3,4-dimethylphenylamino)-1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-(cyclopropylmethoxy)ethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-(cyclopropylmethoxy)ethyl)-5-(N-ethyl-N-methylamino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,
1-(2-isopropoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carboxylic acid,

N-[1-(2-ethoxyethyl)-5-(N-isopropyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide,

N-[1-(2-ethoxyethyl)-5-(N-ethyl-N-methylamino)-7-(4-methylpyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide,

N-[5-(Ethyl-methyl-amino)-1-[2-(3-fluoro-proxy)-ethyl]-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

N-[1-[2-(3-Fluoro-proxy)-ethyl]-5-(isopropyl-methyl-amino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

N-[5-Diethylamino-1-[2-(3-fluoro-proxy)-ethyl]-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

N-[5-Diethylamino-1-[2-(2,2-difluoro-ethoxy)-ethyl]-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide

N-[1-[2-(2,2-Difluoro-ethoxy)-ethyl]-5-(ethyl-methyl-amino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide, and

N-[1-[2-(2,2-Difluoro-ethoxy)-ethyl]-5-(isopropyl-methyl-amino)-7-(4-methyl-pyridin-2-ylamino)-1H-pyrazolo[4,3-d]pyrimidine-3-carbonyl]methanesulfonamide,

and tautomers thereof or pharmaceutically acceptable salts or solvates of said compounds or tautomers.
56. A pharmaceutical composition comprising a compound of formula (I) as claimed in any one of claims 1 to 55, or pharmaceutically acceptable salts or solvates thereof, and a pharmaceutically acceptable diluent or carrier.

57. A compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof, for use as a medicament.

58. A compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof, for use in accordance with claim 57 as a medicament for the treatment of a disease or condition where inhibition of PDE5 is known, or can be shown, to produce a beneficial effect.

59. A compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof, for use in accordance with claim 57 or 58 as a medicament for the treatment of a disease or condition selected from hypertension (including essential hypertension, pulmonary hypertension, secondary hypertension, isolated systolic hypertension, hypertension associated with diabetes, hypertension associated with atherosclerosis, and renovascular hypertension), congestive heart failure, angina (including stable, unstable and variant (Prinzmetal) angina), stroke, coronary artery disease, congestive heart failure, conditions of reduced blood vessel patency (such as post-percutaneous coronary angioplasty), peripheral vascular disease, atherosclerosis, nitrate-induced tolerance, nitrate tolerance, diabetes, impaired glucose tolerance, metabolic syndrome, obesity, sexual dysfunction (including male erectile disorder, impotence, female sexual arousal disorder, clitoral dysfunction, female hypoactive sexual desire disorder, female sexual pain disorder, female sexual orgasmic dysfunction and sexual dysfunction due to spinal cord injury), premature labour, pre-eclampsia, dysmenorrhea, polycystic ovary syndrome, benign prostatic hyperplasia, bladder outlet obstruction, incontinence, chronic obstructive pulmonary disease, acute respiratory failure, bronchitis, chronic asthma, allergic asthma, allergic rhinitis, gut motility disorders (including irritable bowel syndrome), Kawasaki's syndrome,
malignancy, multiple sclerosis, Alzheimer's disease, psoriasis, skin necrosis, scarring, fibrosis, pain (particularly neuropathic pain), cancer, metastasis, baldness, nutcracker oesophagus, anal fissure and haemorrhoids.

60. A method of treatment of a disorder or condition where inhibition of PDE5 is known, or can be shown, to produce a beneficial effect, in a mammal, comprising administering to said mammal a therapeutically effective amount of a compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof.

61. Use of a compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt, or solvate thereof, in the preparation of a medicament for the treatment of a disorder or condition where inhibition of PDE5 is known, or can be shown, to produce a beneficial effect.

62. Use according to claim 61, wherein the disorder or condition is selected from hypertension (including essential hypertension, pulmonary hypertension, secondary hypertension, isolated systolic hypertension, hypertension associated with diabetes, hypertension associated with atherosclerosis, and renovascular hypertension), congestive heart failure, angina (including stable, unstable and variant (Prinzmetal) angina), stroke, coronary artery disease, congestive heart failure, conditions of reduced blood vessel patency (such as post-percutaneous coronary angioplasty), peripheral vascular disease, atherosclerosis, nitrate-induced tolerance, nitrate tolerance, diabetes, impaired glucose tolerance, metabolic syndrome, obesity, sexual dysfunction (including male erectile disorder, impotence, female sexual arousal disorder, clitoral dysfunction, female hypoactive sexual desire disorder, female sexual pain disorder, female sexual orgasmic dysfunction and sexual dysfunction due to spinal cord injury), premature labour, pre-eclampsia, dysmenorrhea, polycystic ovary syndrome, benign prostatic hyperplasia, bladder outlet obstruction, incontinence, chronic obstructive pulmonary disease, acute respiratory failure, bronchitis, chronic asthma, allergic asthma, allergic rhinitis, gut
motility disorders (including irritable bowel syndrome), Kawasaki's syndrome, multiple sclerosis, Alzheimer's disease, psoriasis, skin necrosis, scarring, fibrosis, pain (particularly neuropathic pain), cancer, metastasis, baldness, nutcracker oesophagus, anal fissure and haemorrhoids.

63. Use according to claim 62 wherein the disorder or condition is hypertension.

64. Use according to claim 63 wherein the disorder or condition is selected from essential hypertension, pulmonary hypertension, secondary hypertension, isolated systolic hypertension, hypertension associated with diabetes, hypertension associated with atherosclerosis, and renovascular hypertension.

65. Use according to claim 62 wherein the disorder or condition is diabetes.

66. A pharmaceutical composition comprising a compound of formula (I) as claimed in any one of claims 1 to 55, or pharmaceutically acceptable salts or solvates thereof, and a second pharmaceutically active agent selected from aspirin, angiotensin II receptor antagonists (such as losartan, candesartan, telmisartan, valsartan, irbesartan and eprosartan), calcium channel blockers (such as amlodipine), beta-blockers (i.e. beta-adrenergic receptor antagonists such as sotalol, propranolol, timolol, atenolol, carvedilol and metoprolol), C1027, CCR5 receptor antagonists, imidazolines, sGCa's (soluble guanylate cyclase activators) antihypertensive agents, diuretics (such as hydrochlorothiazide, torsemide, chlorothiazide, chlorthalidone and amiloride), alpha adrenergic antagonists (such as doxazosin), ACE (angiotensin converting enzyme) inhibitors (such as quinapril, enalapril, ramipril and lisinopril), aldosterone receptor antagonists (such as eplerenone and spironolactone), neutral endopeptidase inhibitors, antidiabetic agents (such as insulin, sulfonylureas (such as glyburide, glipizide and gliimepiride), glitazones (such as rosiglitazone and pioglitazone) and metformin), cholesterol lowering agents (such as atorvastatin, pravastatin, lovastatin, simvastatin, clofibrate and rosuvastatin), and alpha-2-delta ligands (such as gabapentin, pregabalin,
67. Use of a compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof, in the preparation of a medicament combined with a second pharmaceutically active agent selected from aspirin, angiotensin II receptor antagonists (such as losartan, candesartan, telmisartan, valsartan, irbesartan and eprosartan), calcium channel blockers (such as amlodipine), beta-blockers (i.e. beta-adrenergic receptor antagonists such as sotalol, propranolol, timolol, atenolol, carvedilol and metoprolol), C1027, CCR5 receptor antagonists, imidazolines, sGCα's (soluble guanylate cyclase activators) antihypertensive agents, diuretics (such as hydrochlorothiazide, torsemide, chlorthalidone and amiloride), alpha adrenergic antagonists (such as doxazosin), ACE (angiotensin converting enzyme) inhibitors (such as quinapril, enalapril, ramipril and lisinopril), aldosterone receptor antagonists (such as eplerenone and spironolactone), neutral endopeptidase inhibitors, antidiabetic agents (such as insulin, sulfonylureas (such as glyburide, glipizide and glibenpiride), glitazones (such as rosiglitazone and pioglitazone) and metformin), cholesterol lowering agents (such as atorvastatin, pravastatin, lovastatin, simvastatin, clofibrate and rosuvastatin), and alpha-2-delta ligands (such as gabapentin, pregabalin, [(1R,5R,6S)-6-(aminomethyl)bicyclo[3.2.0]hept-6-yl]acetic acid, 3-(1-aminomethyl-cyclohexylmethyl)-4H-[1,2,4]oxadiazol-5-one, C-[1-(1H-tetrazol-5-ylmethyl)-cycloheptyl]-methylamine, (3S,4S)-(1-aminomethyl-3,4-dimethyl-cyclopentyl)-acetic acid, (1α,3α,5α)-(3-amino-methyl-bicyclo[3.2.0]hept-3-yl)-acetic acid, (3S,5R)-3-aminomethyl-5-methyl-octanoic acid, (3S,5R)-3-amino-5-methyl-heptanoic acid, (3S,5R)-3-amino-5-methyl-nonanoic acid and (3S,5R)-3-amino-5-methyl-octanoic acid).
acid), for the treatment of a disease or condition where inhibition of PDE5 is known, or can be shown, to produce a beneficial effect.

68. Use according to claim 67 of a compound of formula (I) as claimed in any one of claims 1 to 55, or a pharmaceutically acceptable salt or solvate thereof, in the preparation of a medicament combined with a second pharmaceutically active agent selected from aspirin, angiotensin II receptor antagonists (such as losartan, candesartan, telmisartan, valsartan, irbesartan and eprosartan), calcium channel blockers (such as amlodipine), beta-blockers (i.e. beta-adrenergic receptor antagonists such as sotalol, propranolol, timolol, antenolol, carvedilol and metoprolol), CI1027, CCR5 receptor antagonists, imidazolines, sGCa’s (soluble guanylate cyclase activators) antihypertensive agents, diuretics (such as hydrochlorothiazide, torsemide, chlorothiazide, chlorthalidone and amiloride), alpha adrenergic antagonists (such as doxazosin), ACE (angiotensin converting enzyme) inhibitors (such as quinapril, enalapril, ramipril and lisinopril), aldosterone receptor antagonists (such as eplerenone and spironolactone), neutral endopeptidase inhibitors, antidiabetic agents (such as insulin, sulfonylureas (such as glyburide, glipizide and glimepiride), glitazones (such as rosiglitazone and pioglitazone) and metformin), cholesterol lowering agents (such as atorvastatin, pravastatin, lovastatin, simvastatin, clofibrate and rosuvastatin), and alpha-2-delta ligands (such as gabapentin, pregabalin, [(1R,5R,6S)-6-(aminomethyl)bicyclo[3.2.0]hept-6-yl]acetic acid, 3-(1-aminomethyl-cyclohexylmethyl)-4H-[1,2,4]oxadiazol-5-one, C-[1-(1H-tetrazol-5-ylmethyl)-cycloheptyl]-methylamine, (3S,4S)-(1-aminomethyl-3,4-dimethylcyclopentyl)-acetic acid, (1α,3α,5α)-(3-amino-methyl-bicyclo[3.2.0]hept-3-yl)-acetic acid, (3S,5R)-3-aminomethyl-5-methyl-octanoic acid, (3S,5R)-3-amino-5-methyl-heptanoic acid, (3S,5R)-3-amino-5-methyl-nonanoic acid and (3S,5R)-3-amino-5-methyl-octanoic acid), for the treatment of a disease or condition is selected from hypertension (including essential hypertension, pulmonary hypertension, secondary hypertension, isolated systolic hypertension, hypertension associated with diabetes, hypertension associated with atherosclerosis, and renovascular hypertension), congestive heart failure, angina (including stable, unstable and variant (Prinzmetal)
69. A compound of formula (III)

\[
\begin{align*}
\text{R}^1 & \quad \text{N} & \quad \text{R}^2 \\
\text{R}^3 & \quad \text{N} & \quad \text{R}^4 \\
\text{N} & \quad \text{N} & \quad \text{Cl} \\
\text{R}^5 & \quad \text{O}_2\text{C} & \quad \text{Y}
\end{align*}
\]

wherein \( \text{R}^1, \text{R}^2, \text{R}^3 \) and \( \text{Y} \) are as defined in claim 1 and \( \text{R}^4 \) is \( \text{C}_1-\text{C}_6 \) alkyl or benzyl.

70. A compound according to claim 65 of formula (III')
71. A compound of formula (V)

wherein $R^6$ and $Y$ are as defined in claim 1 and $R^A$ is C$_1$-C$_6$ alkyl or benzyl.

72. A compound according to claim 71 of formula (V$^b$)

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

* Special categories of cited documents:
  * "A" document defining the general state of the art which is not considered to be of particular relevance
  * "E" earlier document but published on or after the international filing date
  * "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
  * "O" document referring to an oral disclosure, use, exhibition or other means
  * "P" document published prior to the international filing date but later than the priority date claimed
  * "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
  * "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
  * "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
  * "B" document member of the same patent family
