# UNITED STATES PATENT OFFICE

CHARLES S. DAUGHERTY, OF PHILADELPHIA, PENNSYLVANIA

## CONTAINER

Application filed May 29, 1928. Serial No. 231,411.

This invention relates to containers, and more particularly to receptacles stamped from a single blank of cardboard to be used for display purposes and for containing moth-balls, deodorizers and other air conditioners.

The invention has for its object the provision of a foldable container having a flap suspending means formed integral therewith.

Another object of the invention is to provide a folding box which is so constructed that air conditioners contained therein will be diffused slowly.

With the foregoing and other objects in view which will appear as the description proceeds, the invention resides in the combination and arrangement of parts and in the details of construction hereinafter described and claimed, it being understood that, within the scope of what is claimed, changes in the precise embodiment of the invention shown can be made without departing from the spirit of the invention.

In the accompanying drawings the preferred form of the invention has been shown.

Figure 1 is a perspective view of the folding box in use;

Fig. 2 is a view on line 2—2 of Fig. 1 showing also the device in use; and

Fig. 3 is a view of the blank.

Referring to the drawings, reference characters 1 and 2 designate the side walls of the container and 3 and 4 designate the end walls. The side walls 1 and 2 are provided with flaps 5 and 6 to be used as top and bottom of the container. Flaps 5 and 6 are further provided with extensions 7 and 8 which are bent inwardly, as shown in Fig. 2, when the container is folded into shape for use. End walls 3 and 4 are also provided with flaps 9 and 10. End wall 4 is also provided with an extension 11 which is used to attach the side wall 1 and end wall 4. End walls 3 and 4 and flap 6 are provided with openings 21 and from flap 6 is cut a lip 10 which is provided with an opening 11 in the center thereof.

For the purpose of suspending the con-

tainer when it is used as a slow vaporizer or air conditioner, I provide lip 10 which is suitably perforated at 11 to form suspending means. In making up the box, side walls 1 and 2 are folded at 12, 13 and 14. Extension 11 is then glued or fastened by other suitable means to the inner side of the side wall 1; and flaps 9 and 10 are bent inwardly at 15 and 16. Flaps 5 and 6 are bent at 17 and 18 and the extensions 7 and 8 are, respectively, bent downwardly and upwardly at 19 and 20. When the container is to be suspended the lip 10 is bent upwardly, as is shown in Fig. 1, and the supporting means is inserted in the aperture 11.

What I claim is:

1. An improved deodorizer container for holding and permitting slow vaporization of the container contents, comprising a single sheet of cardboard died to form box sides, top, and bottom, means in said container for permitting a limited contact with the contents of the container with the air, said means consisting of a restricted opening in the bottom of the container and restricted openings in at least two of the sides, and a flap cut from the top for suspending the container, and providing an opening for permitting vaporization.

2. A package, a deodorizer in said package, said package comprising a single sheet of cardboard died to form box sides, top, and bottom, means in said package for permitting limited contact of the deodorizer with the air, said means consisting of a restricted opening in the bottom of the package and restricted openings in at least two of the sides, and a flap cut from the top for suspending the container and providing an aperture for permitting vaporization.

CHA'S. S. DAUGHERTY.
