(54) Title: SYSTEM AND METHOD FOR EMPLOYING STATE INFORMATION TO ENHANCE NETWORK FUNCTIONALITY

(57) Abstract: A system and method for enabling an enhanced camp-on feature for a communications device. In an illustrative embodiment, the system includes a first mechanism for providing information pertaining to why a first user of a first communications device is unable to be contacted. A second mechanism enables a second user of a second communications device to make a camp-on selection based on the information. In a more specific embodiment, the information includes state information pertaining to the first communications device. The first means includes a first module running on the first communications device. The first module is adapted to selectively relay the state information to an entity connected to the network. In the specific embodiment, the entity connected to the network includes Private Branch eXchange (PBX) system.
