(54) Apparatus and method for an installation recovery system

(57) Apparatus and method are provided for efficiently recovering from an interrupted install system (50). The install system (50) creates a list of components to be installed during the installation procedure. The installation recovery system (90) works in conjunction with the component list and current component pointer to identify which component was the last component successfully installed by the interrupted install system (50). In an instance where recovery is required, the installation recovery system (90) identifies the last component installed and then restarts the install system (50) from the point it was interrupted.
