(54) Rack assembly for photographic processors.

(57) A rack assembly for a photographic roller processor is provided with plastic side frames for supporting rollers mounted between the side frames. The plastic side frames are provided with axially aligned roller bearing apertures and roller bearing pin apertures which support the rotatable rollers. The roller bearing aperture is made larger in diameter than the roller to provide a bearing surface for the roller and permits the roller to be installed between the side frames by inserting the roller through the roller bearing aperture from outside the side frame.
