Samuel Rundall

Letters Patent

The Schedule referred to in these Letters Patent and making part of the same containing a description in the words of the said Samuel Rundall himself of the mode of teaching to read

The Skeleton (or form) of Letters Figures &c are formed on Slates by colouring all parts of it except the Skeleton (or form) of the Letter viz. all parts of the paper are to be coloured except where the form is to be drawn to form the Letter or figure or at least so much of it coloured as will render the skeleton (or form) of one discernable to the practitioner or pupil. This is done by engraving whatever is desired should be written on the surface of any kind of metal. The colouring is then spread over said surface. The paper is then laid and pressed upon it which will colour all parts of the paper except the engraving [for the engraving there will be none left] then skeleton the pupil is to trace with a pen. These skeletons may be formed any other way which experience shall prove most expedient. The above I hereby acknowledge to be the discription of the improvement I make consideration
