A

Design of stripes of various
colors for printing calicoes

Issue
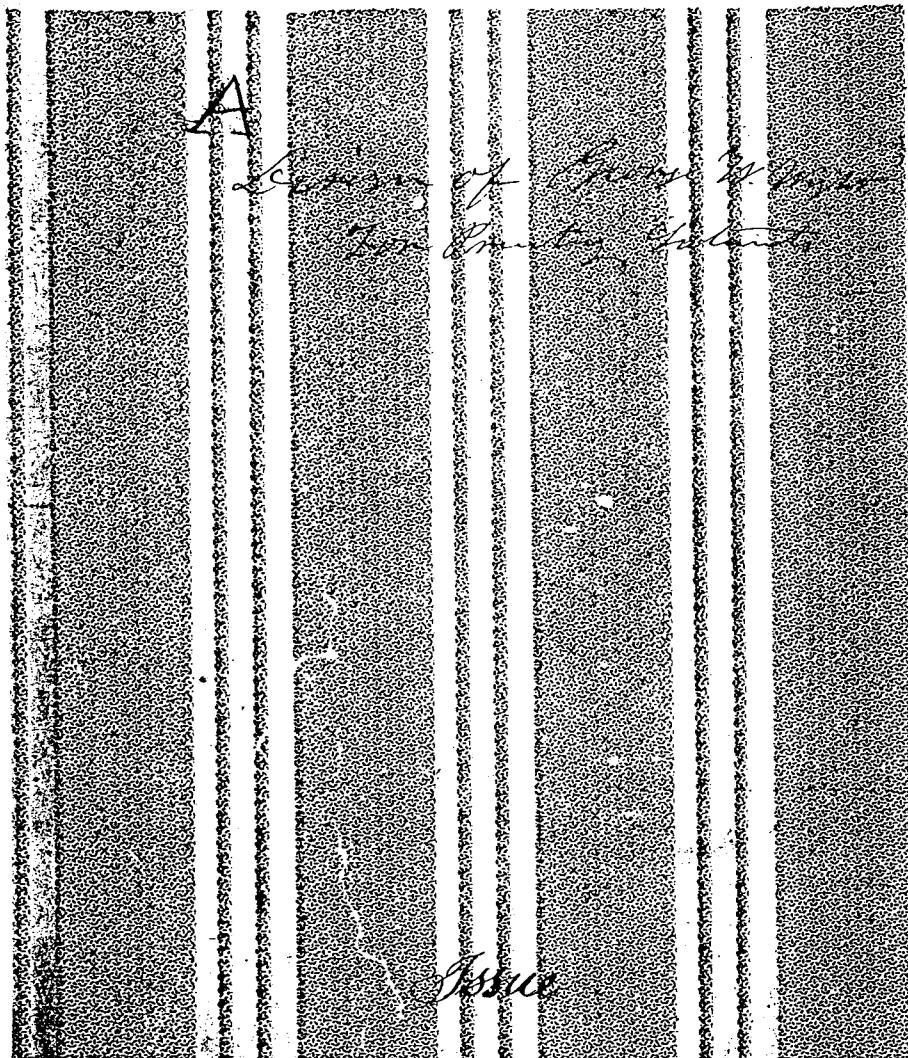

UNITED STATES PATENT OFFICE.

GEORGE W. WIGHT, OF NEW YORK, N. Y.

DESIGN FOR PRINTING ON WOOLENS.

To all whom it may concern:

Be it known that I, GEORGE W. WIGHT, of New York, in the county of New York and State of New York, have produced a new Design for Printing upon Fabrics, particularly Woolen; and I do hereby declare the following to be a full, clear, and exact description of the same, reference being had to the annexed drawing, making a part of this specification, marked A, and being a correct impression taken from the rollers as engraved.

The design as produced by me consists of stripes or columns of small figures combined together, the technical name of which is the "barley-corn figure." I arrange them as seen in the drawing by placing a wide stripe then a narrow white stripe. This is followed by a narrow stripe of the "barley-corn work," and next a stripe of white and a like stripe to the last of the barley-corn work, next a white stripe extending to the wide stripe of the next figure of stripes or columns, and these are re-peated side by side or parallel to each other to the entire length or width of the piece of goods. This may be used as a groundwork or a cross-over work at pleasure, and with any and all other figures in combination, in printing said suits or other fabrics, both running in what is termed "stripes," or running lengthwise of the cloth, and in "cross-over," or what may be understood as "widthwise" of the cloth or other material, in any and all colors.

What I claim is—

The peculiar combination of the barley-corn work figures, or others substantially the same, into this arrangement of stripes, to be printed upon fabrics separately or in combination with other figures, whether it is arranged to run lengthwise or breadthwise of the cloth.

GEORGE W. WIGHT.
