(54) Title: A TASK COMPLETION AUTHENTICATION SYSTEM AND METHOD

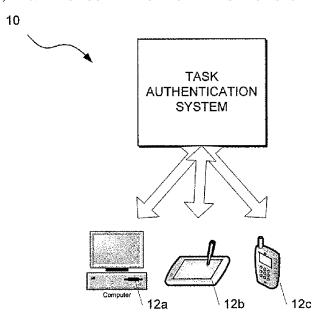

FIGURE 1

(57) Abstract: A method of authenticating the completion of a task includes receiving data including contextual data, user identification data and task completion data including information about a task that has been completed. A memory is accessed and retrieving previously stored contextual data and user identification data and the received contextual data and user identification data is stored with the previously stored contextual data and user identification data for future authenticating that the task described in the task completion data has been complete if required.
