(54) Title: COLORED PRINTING INK FOR CONTACT LENSES

(57) Abstract: The present invention provides novel inks and methods for making a colored polymeric substrate, preferably a contact lens. In the inventive method at least a portion of a surface of a lens is coated with a color coat comprising at least one colorant, and a binder polymer obtained by copolymerizing a first monomer being ethylenically unsaturated and having a latent cross-linkable pendent group; and a second monomer having an ethylenically unsaturated double bond copolymerizable with the first monomer. The lens is then subjected to conditions that cause the color coat to adhere to the lens.
