UNITED STATES PATENT OFFICE

2,471,441

COMBINATION LIPSTICK AND ROUGE
CONTAINER

Alfreda Bowman Moore, Chicago, Ill.

Application December 14, 1945, Serial No. 634,939

1 Claim. (Cl. 132—79)

1

This invention relates to a new and improved combination lipstick and rouge container.

It has been generally accepted that blending of cosmetic colors enhances the beauty of the user. Hence cosmetic manufacturers have contemplated making lipstick and rouge which harmonize in shade. It is therefore a principal object of this invention to supply users of cosmetics with blended colors of lipstick and rouge in a convenient compact container.

An important object of this invention is to provide a container for blended lipstick and rouge.

Another important object of the invention is the provision of means for housing a lipstick and rouge in a single tubular container.

A further object of the invention is to provide a rouge in the cover of a lipstick container which may be pre-blended by the manufacturer.

Other and still further important objects of this invention will become apparent from the disclosures in the following specification and accompanying drawings, in which:

Figure 1 is an exploded view of the combination lipstick and rouge container of this invention.

Figure 2 is a vertical sectional view of the assembled lipstick and rouge container as shown in Figure 1.

As shown in the drawings:

The reference numeral 10 indicates generally a circular base member having an upwardly extending cylindrical housing 11 for a lipstick 12. Means is provided within the housing 11 for causing the lipstick 12 to be moved upwardly a greater or less distance from the top of the cylindrical housing 11. The mechanism for providing this lipstick ejection has not been shown inasmuch as it forms no part of the present invention. An elongated cylindrical cover member 13 is adapted to telescopically engage the cylindrical housing 11 and thus enclose the lipstick. When the lipstick is used separately from the face rouge a small top cover 14 is in position as shown in Figure 2. Ordinarily the cover members 13 and 14 are removable from the lipstick housing 11 as a single unit whereupon the lipstick 12 may be used as desired and the cover including the members 13 and 14 replaced. However, when it is desired to use both lipstick and rouge, the top cover 14 is removed so that access may be had to a pad of face rouge 15 which is preferably press fitted within the upper annular portion 16 of the long cylindrical cover 13. As shown in Figure 2 the rouge 15 is placed into

2

a shallow cup member 17 which has substantially the same diameter as the inner diameter of the sleeve-like cover member 13. It is apparent that with this construction the rouge 15 may be readily gripped by a user by reason of the elongated sleeve cover member 13. Further the rouge may be used without the lipstick being opened or may be used separately from the lipstick after the lipstick has been opened.

The cap 14 and the sleeve-like cover member 13 are provided with cooperative bayonet-type locking members. A pin 18 projects outwardly from the reduced diameter collar 19 of the sleeve member 13. A slot 20 is formed within the cap member 14, the mouth of the slot being in alignment and opposed to the projecting pin 18 on the side of the collar 19. The slot 20 has a mouth portion 21 and a laterally and upwardly extending extension 22. When the cap 14 has its skirt portion 23 placed down over the collar 19 of the sleeve member 13, the pin 18 rides up into the mouth 21 of the slot 20. Subsequent rotation of the cap 14 with respect to the sleeve 13 causes the pin 18 to ride around within the laterally and upwardly inclined portion 22 of the slot 20. Such a procedure securely locks the cap onto the elongated sleeve-like cover member 13. Any other suitable means of attachment between the cap 14 and the sleeve member 13 may be used in lieu of the bayonet joint.

As stated above, the cup member carrying the rouge 15 is placed within a shallow cup-like retainer 17. This retainer 17 has an annular flange 24 which is adapted to rest on top of the collar 19 to prevent insertion of the cup 17 farther than desired. The cup 17 is designed relatively shallow so that the overall height of the combination lipstick and rouge holder will not exceed the overall height of a standard lipstick container by more than a small fraction of an inch. The cup member 17 may be held within the sleeve member 13 in any one of a number of ways. However, it is believed that a press fitting of the cup 17 within the sleeve 13 is preferable. In addition the cup 17 may be removable so that the pad of face rouge may be replaced should it become used up entirely.

Numerous details of construction may be varied throughout a wide range without departing from the principles disclosed in this combination lipstick and rouge container, and I therefore do not propose limiting the patent granted hereon otherwise than as necessitated by the appended claim.

What is claimed is:

A combination lipstick and rouge container comprising a base, a tubular housing extending upwardly from said base, a lipstick vertically positioned in said tubular housing and adapted to move vertically within said tubular housing for use as it projects out the top thereof, an elongated tubular sleeve cover adapted to telescope said tubular housing, a cup press fitted in the top end of said sleeve cover, a rouge pad in said cup, and a removable cap for the top end of the sleeve cover and the rouge pad, whereby the cap may be removed from the sleeve cover to permit use of the rouge and/or the sleeve cover may be removed from the tubular housing to permit use of the lipstick.
