UNITED STATES PATENT OFFICE.

HARRY GENDEL, OF CHICAGO, ILLINOIS, ASSIGNOR TO ALBERT M. DOCTER, OF CHICAGO, ILLINOIS.

OUTER GARMENT.

1,405,405. Specification of Letters Patent. Patented Feb. 7, 1922.

Application filed February 5, 1921. Serial No. 442,611.

To all whom it may concern:

Be it known that I, HARRY GENDEL, a citizen of Russia, having declared my intention to become a citizen of the United States, residing at Chicago, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Outer Garments, of which the following is a specification.

This invention relates to a child's garment for covering the entire body and has for its object the provision of a garment which shall be of improved construction and attractive appearance and convenient in use.

The invention is exemplified in the combination and arrangement of parts shown in the accompanying drawing and described in the following specification, and it is more particularly pointed out in the appended claim.

In the drawings—

Fig. 1 is a front elevation of a combined garment embodying one form of the present invention;

Fig. 2 is a side elevation of the garment shown in Fig. 1; and

Figs. 3 and 4 are side elevations, respectively, of the lower portion of modified forms of the invention.

The combined garment contemplated by the present invention comprises an upper portion or jacket 10 having sleeves and a collar of any approved style and preferably open all the way down at the front and held in closed position by buttons 11 or other suitable fasteners. A series of fasteners 12 are secured to the jacket 10 in a line extending around the garment near the waist and the jacket is provided with a downwardly extending tail 13 which in use is covered by the upper portion of the combined trousers and leggings 14. The combined trousers and leggings 14 are held in place by the fastenings 12 and are preferably flared at the bottom, as shown at 15, to cover the upper portion of the wearer's feet in the manner of over-gaiters or leggings. A strap 16 is secured to the front portion of the garment in position to pass beneath the instep of the wearer.

The combined trousers and leggings may be open at both sides adjacent the top and secured in closed position by fasteners 17 and also open along the lower outside portion of each leg and closed by fasteners 18. Between the open portions in this form of the invention is a space 19 permanently connected for holding the back and rear parts of the outside of the legs together. The garment may be made, however, as shown in Figs. 3 and 4, with the entire sides of the legs, from the waist line to the feet, open, with fastenings 20 for holding them in closed position. An additional buckle 21 and strap 22 may be provided, as shown in Fig. 3, when desired.

As shown in Fig. 4, in broken lines, an elastic band 23 may be inserted in a hem at the waist line in the rear portion of the lower garment for holding this portion snugly against the waist when the garment is in place.

The garment is especially intended for outside wear and may be made of Jersey cloth or other suitable material similar to that of over-gaiters, or, may be made of leather, plush, or any other material suitable for outside wear.

I claim:—

A child's outer garment comprising a jacket member for covering the upper portion of the body, said member having sleeves and a collar and being open all the way up and down in front, means for securing said member in closed position above the waist line, a portion of said member below the waist line forming a tail for said jacket, a lower garment secured to said jacket adjacent the waist line and covering the tail portion of said jacket, said lower garment comprising legs extending to the feet of the wearer and shaped at their lower ends to cover a portion of the wearer's feet, straps on the lower ends of said legs arranged to pass beneath the insteps of the wearer, the legs of said garment being open at their lower portions at the outsides thereof, fasteners for securing said open portions together, the upper portions of the legs of said garment being open at the sides in alinement with the openings at the lower outsides of the legs, fastenings for securing the upper openings of said lower garment together, and an elastic in the rear back portion of said lower garment adjacent the waist line for holding said portion snugly against the body of the wearer.

In testimony whereof I have signed my name to this specification on this 29th day of January, A. D. 1921.

HARRY GENDEL.
