UNITED STATES PATENT OFFICE.

JOHN A. ANDERSON, OF THIEF RIVER FALLS, MINNESOTA.

ATTACHMENT FOR POCKETS.

1,066,779. Specification of Letters Patent. Patented July 8, 1913.

Application filed February 20, 1911. Serial No. 609,625.

To all whom it may concern:

Be it known that I, JOHN A. ANDERSON, a citizen of the United States, residing at Thief River Falls, in the county of Pennington and State of Minnesota, have invented certain new and useful Improvements in Attachments for Pockets, of which the following is a specification.

This invention relates to attachments for pockets and more particularly to an attachment especially adapted for use in the concealed pockets sometimes provided in ladies' muffs.

The object of the device is to afford a means for retaining within the muff pocket small toilet articles such as a pocket mirror or tooth brush, etc.

With the foregoing and other objects in view the invention consists in the combination and arrangement of parts to be hereinafter fully described in the following specification, pointed out in the claim and illustrated in the accompanying drawing, which forms a part of said specification and in which—

Figure 1 is a side elevation of a muff with pocket therein in which my attachment is employed. Fig. 2 is a section on line 2—2 of Fig. 1. Fig. 3 is a side elevation of the attachment proper, part of the same being broken away. Fig. 4 is a vertical section taken on line 4—4 of Fig. 3.

Like reference characters indicate corresponding parts throughout the several views.

Many ladies' muffs are provided with pockets of one kind or another for convenience in carrying a handkerchief or other small article. This attachment is designed for use in connection with this style of pocket.

2 is a muff having a pocket formed in the lining 3 thereof. My attachment comprises a sack which is sewed or otherwise suitably secured within the muff lining and which comprises parallel top and bottom members 4 and 5 respectively, lateral members 6 and an end member 7 to which the other members are fastened thus forming a sack, the opposite end of which is open and resides adjacent the mouth of the muff pocket. This attachment should be made of a suitable stiff fabric and to give the same greater rigidity stays 7^a are secured upon the lateral members 6 and the top and bottom members 4 and 5.

An elastic 8 is provided on the end member 7 to which a tooth brush handle, small pocket mirror or other article may be secured. This arrangement permits the wearer of the muff to carry articles of this nature concealed and in the case of the mirror shown in the drawings the same may be drawn out of the pocket by a suitable cord affixed to one end thereof and when the cord is released the elastic will draw the mirror back into the pocket. This attachment gives rigidity to the muff pocket thus overcoming the one objectionable feature of this style of pocket and its use also avoids crushing or crumpling of articles that may be placed in the pocket.

What I claim is—

In a muff provided with a pocket in its lining, stiffening means for said pocket disposed therewithin and an elastic tongue disposed within said pocket secured to the base thereof and adapted for contact with a toilet article carried in said pocket to retain said article therewithin when not in use.

In testimony that I claim the foregoing as my own I have hereto affixed my signature in the presence of two subscribing witnesses.

JOHN A. ANDERSON.
