Title: 1-PYRIDIN-4-YL-UREA DERIVATIVES

Abstract: The invention relates to novel 1-pyrindin-4-yl urea derivatives and related compounds and their use as active ingredients in the preparation of pharmaceutical compositions. The invention also concerns related aspects including processes for the preparation of compounds, pharmaceutical compositions containing one or more of those compounds and especially their use as neurohormonal antagonists.
1-PYRIDIN-4-YL-UREA DERIVATIVES

FIELD OF THE INVENTION

The present invention relates to novel 1-pyridin-4-yl urea derivatives of the general formula 1 and their use as active ingredients in the preparation of pharmaceutical compositions. The invention also concerns related aspects including processes for the preparation of the compounds, pharmaceutical compositions containing one or more compounds of the general formula 1 and especially their use as neurohormonal antagonists.

BACKGROUND OF THE INVENTION

antagonists, and WO-2002/02530 also discloses certain compounds useful as urotensin II receptor antagonists.

EP 428434 discloses certain alkylureidopyridines as neurokinin and substance P antagonists. WO-99/21835 discloses certain ureidoquinolines as H+ -ATPase and bone resorption inhibitors. WO-01/009088 discloses certain substituted heteroarylureas as inhibitors of the CCR-3 receptor. All of these ureidopyridine derivatives differ in their composition from compounds of the present invention. The present invention comprises 1-pyridin-4-yl urea derivatives which are novel compositions of matter and which are useful as urotensin II receptor antagonists.

**DESCRIPTION OF THE INVENTION**

The present invention relates to compounds of the general formula 1,

\[

\end{array}
\]

**General Formula 1**

wherein:

15 Py represents quinolin-4-yl which is unsubstituted or mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2, 6 or 8; [1,8]naphthyridin-4-yl which is unsubstituted or monosubstituted in position 7 with lower alkyl; pyridin-4-yl which is unsubstituted or disubstituted in positions 2 and 6, whereby the substituent in position 2 is \( R^5 R^6 N^- \), lower alkyl, aryl-lower alkyl, or (E)-2-aryl-ethen-1-yl and the substituent in position 6 is hydrogen or lower alkyl;

X is absent or represents a methylene group;

\( R^1 \) represents hydrogen; lower alkyl; aryl; aryl-lower alkyl; lower alkyl disubstituted with aryl; or lower alkyl disubstituted with aryl and additionally substituted at a carbon atom bearing an aryl group with \( OH, CN, \) or \( CONR^7 R^8 \);

25 \( R^2 \) forms together with \( R^3 \) a five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom and in which case \( R^4 \) represents hydrogen; or
R² forms together with R⁴ a five-, six-, or seven-membered ring containing the nitrogen atom to which R² is attached as a ring atom and in which case R³ represents hydrogen;

the rings formed between R² and R³ or between R² and R⁴ are unsubstituted or monosubstituted with lower alkyl, aryl, aryl-lower alkyl, hydroxy, or aryloxy;

R⁵ and R⁶ independently represent hydrogen; lower alkyl; aryl; aryl-lower alkyl; or form together with the nitrogen atom to which they are attached a pyrrolidine, piperidine, or morpholine ring;

R⁷ and R⁸ independently represent hydrogen; lower alkyl; aryl; aryl-lower alkyl; or form together with the nitrogen atom to which they are attached a pyrrolidine, piperidine, or morpholine ring;

and optically pure enantiomers or diastereomers, mixtures of enantiomers or diastereomers, diastereomeric racemates, and mixtures of diastereomeric racemates; as well as their pharmaceutically acceptable salts, solvent complexes, and morphological forms.

In the definitions of the general formula 1 the expression ‘lower alkyl’ means straight or branched chain groups with one to seven carbon atoms, preferably 1 to 4 carbon atoms. Lower alkyl also encompasses cyclic alkyl groups with three to six carbon atoms. Preferred examples of lower alkyl groups are methyl, ethyl, n-propyl, isopropyl, n-butyl, iso-butyl, sec-butyl, tert-butyl, n-pentyl, n-hexyl, n-heptyl, cyclopropyl, cyclobutyl, cyclopentyl, and cyclohexyl.

The expression ‘aryl’ means a phenyl, biphenyl or naphthyl group which optionally carries one or more substituents, preferably one or two substituents, each independently selected from cyano, halogen, lower alkyl, lower alkyloxy, lower alkenyloxy, trifluoromethyl, trifluoromethoxy, amino, carboxy and the like. Preferred examples of aryl groups are phenyl, 4-methylphenyl, 4-methoxyphenyl, 4-bromophenyl, 4-cyanophenyl, 4-chlorophenyl, 4-fluorophenyl, 4-biphenyl, 2-methylphenyl, 2-methoxyphenyl, 2-bromophenyl, 2-cyanophenyl, 2-chlorophenyl, 2-fluorophenyl, 2-biphenyl, 3-methylphenyl, 3-methoxyphenyl, 3-bromophenyl, 3-
cyanophenyl, 3-chlorophenyl, 3-fluorophenyl, 3-biphenyl, naphthalen-1-yl, and naphthalen-2-yl.

The expression 'aryl-lower alkyl' means a lower alkyl group as previously defined in which one hydrogen atom has been replaced by an aryl group as previously defined. Preferred examples of aryl-lower alkyl groups are 3-phenylpropyl, phenethyl, benzyl and benzyl substituted in the phenyl ring with hydroxy, lower alkyl, lower alkoxy, or halogen.

Preferred examples of '($E$)-2-aryl-ethen-1-yl' groups are ($E$)-2-phenylethen-1-yl, ($E$)-2-(4-fluorophenyl)ethen-1-yl and ($E$)-3-phenylpropen-1-yl.

Preferred examples of 'lower alkyl disubstituted with aryl' groups are 2,2-diphenylethyl, 3,3-diphenylpropyl and 1-benzyl-2-phenyl-ethyl.

Preferred examples of 'lower alkyl disubstituted with aryl and additionally substituted at a carbon atom bearing an aryl group with OH, CN or CONR$^7$R$^8$' groups are 2,2-diphenyl-2-hydroxy-ethyl, $N,N$-dimethyl-2,2-diphenyl-4-yl-butyramide and $N,N$-diethyl-2,2-diphenyl-4-yl-butyramide.

The present invention encompasses pharmaceutically acceptable salts of compounds of the general formula 1. This encompasses either salts with inorganic acids or organic acids like hydrohalogenic acids, e.g. hydrochloric or hydrobromic acid, sulfuric acid, phosphoric acid, nitric acid, citric acid, formic acid, acetic acid, maleic acid, tartaric acid, methylsulfonic acid, p-tolylsulfonic acid and the like or in case the compound of formula 1 is acidic in nature with an inorganic base like an alkali or earth alkali base, e.g. sodium, potassium, or calcium salts, etc. The compounds of general formula 1 can also be present in form of zwitterions.

The present invention encompasses different solvation complexes of compounds of general formula 1. The solvation can be effected in the course of the manufacturing process or can take place separately, e.g. as a consequence of hygroscopic properties of an initially anhydrous compound of general formula 1.
The present invention further encompasses different morphological forms, e.g. crystalline forms, of compounds of general formula 1 and their salts and solvation complexes. Particular heteromorphs may exhibit different dissolution properties, stability profiles, and the like, and are all included in the scope of the present invention.

The compounds of the general formula 1 might have one or more asymmetric carbon atoms and may be prepared in form of optically pure enantiomers or diastereomers, mixtures of enantiomers or diastereomers, diastereomeric racemates, and mixtures of diastereomeric racemates. The present invention encompasses all these forms. They are prepared by stereoselective synthesis, or by separation of mixtures in a manner known per se, i.e. by column chromatography, thin layer chromatography, HPLC, crystallization, etc.

Preferred compounds of general formula 1 are the compounds wherein $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen and Py, X, and $R^1$ have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein $R^4$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^3$ is hydrogen and Py, X, and $R^1$ have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein Py represents quinolin-4-yl mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2 or 8, and $R^1$, $R^2$, $R^3$, $R^4$, and X have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein Py represents pyridin-4-yl substituted in position 2 with $R^5R^6N-$, wherein $R^5$ represents lower alkyl and $R^6$ represents aryl-lower alkyl, and $R^1$, $R^2$, $R^3$, $R^4$, and X have the meaning given in general formula 1 above.
Another group of preferred compounds of general formula 1 consists of those compounds wherein Py represents pyridin-4-yl substituted in position 2 with \( R^5R^6N^- \), wherein \( R^6 \) represents hydrogen and \( R^1, R^2, R^3, R^4, R^5 \), and \( X \) have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein \( X \) is absent and \( R^1, R^2, R^3, R^4 \), and Py have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl, and \( R^1, R^2, R^3, R^4 \), and \( X \) have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein Py represents pyridin-4-yl disubstituted in position 2 with aryl-lower alkyl and in position 6 with lower-alkyl, and \( R^1, R^2, R^3, R^4 \), and \( X \) have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein \( R^1 \) represents lower alkyl disubstituted with aryl and \( R^2, R^3, R^4, X, \) and Py have the meaning given in general formula 1 above.

Another group of preferred compounds of general formula 1 consists of those compounds wherein \( R^1 \) represents lower alkyl disubstituted with aryl and additionally substituted at a carbon atom bearing an aryl group with OH, CN, or CONR^2R^8, and \( R^2, R^3, R^4, R^7, R^8, X, \) and Py have the meaning given in general formula 1 above.

A group of especially preferred compounds of general formula 1 consists of those compounds wherein \( X \) is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents quinolin-4-yl mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2 or 8, and \( R^1 \) has the meaning given in general formula 1 above.
Another group of especially preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl substituted in position 2 with \( R^5 R^6 N^- \), wherein \( R^5 \) represents aryl-lower alkyl and \( R^6 \) represents lower alkyl, and \( R^1 \) has the meaning given in general formula 1 above.

Another group of especially preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl substituted in position 2 with \( R^5 R^6 N^- \), wherein \( R^5 \) represents hydrogen, and \( R^1 \), and \( R^6 \) have the meaning given in general formula 1 above.

Another group of especially preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl, and \( R^1 \) has the meaning given in general formula 1 above.

Another group of especially preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 with aryl-lower alkyl and in position 6 with lower-alkyl, and \( R^1 \) has the meaning given in general formula 1 above.

Another group of especially preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, \( R^1 \) represents lower alkyl disubstituted with aryl, and Py has the meaning given in general formula 1 above.
A group of most preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents quinolin-4-yl monosubstituted with lower alkyl or aryl-lower alkyl in the position 2 and \( R^1 \) has the meaning given in general formula 1 above.

Another group of most preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl substituted in position 2 with \( R^5 R^6 N_2 \), wherein \( R^6 \) represents hydrogen and \( R^1 \), and \( R^5 \) have the meaning given in general formula 1 above.

Another group of most preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl and \( R^1 \) has the meaning given in general formula 1 above.

Another group of most preferred compounds of general formula 1 consists of those compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, \( R^1 \) represents lower alkyl disubstituted with aryl, and Py has the meaning given in general formula 1 above.

Examples of particularly preferred compounds of general formula 1 are:

1-(2-Methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea;

1-[1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;

1-[1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;

1-(2-Methyl-quinolin-4-yl)-3-(1-phenethyl-pyrrolidin-3-yl)-urea;

1-(2-Methyl-quinolin-4-yl)-3-[1-(3-phenyl-propyl)-pyrrolidin-3-yl]-urea;
1-[(R)-1-(1-Methyl-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(S)-1-(1-Methyl-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[1-(2,2-Diphenyl-ethyl)-piperidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[1-(3,3-Diphenyl-propyl)-piperidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(S)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(R)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
(R)-1-(1-Benzyl-pyrrolidin-3-yl)-3-(2-methyl-quinolin-4-yl)-urea;
(S)-1-(1-Benzyl-pyrrolidin-3-yl)-3-(2-methyl-quinolin-4-yl)-urea;
1-(1-Benzyl-pyrrolidin-3-yl)-3-(2-methyl-quinolin-4-yl)-urea;
1-[(S)-1-(2-Hydroxy-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(R)-1-(2-Hydroxy-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(S)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-2-ylmethyl]-3-(2-methyl-quinolin-4-yl)-urea;
1-[(R)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-2-ylmethyl]-3-(2-methyl-quinolin-4-yl)-urea;

$N,N$-Diethyl-4-[(S)-3-[3-(2-methyl-quinolin-4-yl)-ureido]-pyrrolidin-1-yl]-2,2-diphenyl-butyramide;

$N,N$-Diethyl-4-[(R)-3-[3-(2-methyl-quinolin-4-yl)-ureido]-pyrrolidin-1-yl]-2,2-diphenyl-butyramide;

$N,N$-Dimethyl-4-[(S)-3-[3-(2-methyl-quinolin-4-yl)-ureido]-pyrrolidin-1-yl]-2,2-diphenyl-butyramide;

$N,N$-Dimethyl-4-[(R)-3-[3-(2-methyl-quinolin-4-yl)-ureido]-pyrrolidin-1-yl]-2,2-diphenyl-butyramide;

1-(1-Biphenyl-3-ylmethyl-pyrrolidin-3-yl)-3-(2-methyl-quinolin-4-yl)-urea;

1-[(S)-1-Biphenyl-2-ylmethyl-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;

1-[(S)-1-(3-Cyano-3,3-diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;

1-[(R)-1-(3-Cyano-3,3-diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea;

1-[(S)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2,6-dimethyl-pyridin-4-yl)-urea;

1-[(R)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2,6-dimethyl-pyridin-4-yl)-urea;

1-(2,6-Dimethyl-pyridin-4-yl)-3-[(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;

1-(2,6-Dimethyl-pyridin-4-yl)-3-[(S)-1-(2-hydroxy-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;

1-(2,6-Dimethyl-pyridin-4-yl)-3-[(R)-1-(2-hydroxy-2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;

1-(2,6-Dimethyl-pyridin-4-yl)-3-[(S)-1-(3,3-diphenyl-propyl)-pyrrolidin-3-yl]-urea;

1-(2,6-Dimethyl-pyridin-4-yl)-3-[(R)-1-(3,3-diphenyl-propyl)-pyrrolidin-3-yl]-urea;
1-[(S)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2-ethyl-6-methyl-pyridin-4-yl)-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-ethyl-6-methyl-pyridin-4-yl)-urea;
1-[(S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-ethyl-6-methyl-pyridin-4-yl)-urea;
1-[(S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-[2-methyl-6-((E)-styryl)-pyridin-4-yl]-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-{2-[((E)-2-(4-fluoro-phenyl)-vinyl]-6-methyl-pyridin-4-yl]}-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-6-phenethyl-pyridin-4-yl)-urea;
1-[(S)-1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-6-propyl-pyridin-4-yl)-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-6-propyl-pyridin-4-yl)-urea;
1-[(S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-6-propyl-pyridin-4-yl)-urea;
1-[2-(Benzyl-methyl-amino)-pyridin-4-yl]-3-{(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;
1-[(S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-6-phenethyl-pyridin-4-yl)-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-{2-[2-(4-fluoro-phenyl)-ethy1]-6-methyl-pyridin-4-yl]-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methylamino-pyridin-4-yl)-urea;
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-propylamino-pyridin-4-yl)-urea;
1-(2-Cyclopentylamino-pyridin-4-yl)-3-{(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;
1-(2-Benzylamino-pyridin-4-yl)-3-{(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea.
Because of their ability to inhibit the actions of urotensin II, the described compounds can be used for treatment of diseases which are associated with an increase in vasoconstriction, proliferation or other disease states associated with the actions of urotensin II. Examples of such diseases are hypertension, atherosclerosis, angina or myocardial ischemia, congestive heart failure, cardiac insufficiency, cardiac arrhythmias, renal ischemia, chronic kidney disease, renal failure, stroke, cerebral vasospasm, cerebral ischemia, dementia, migraine, subarachnoidal hemorrhage, diabetes, diabetic arteriopathy, diabetic nephropathy, connective tissue diseases, cirrhosis, asthma, chronic obstructive pulmonary disease, high-altitude pulmonary edema, Raynaud's syndrome, portal hypertension, thyroid dysfunction, pulmonary edema, pulmonary hypertension, or pulmonary fibrosis. They can also be used for prevention of restenosis after balloon or stent angioplasty, for the treatment of cancer, prostatic hypertrophy, erectile dysfunction, hearing loss, amaurosis, chronic bronchitis, asthma, gram negative septicemia, shock, sickle cell anemia, glomerulonephritis, renal colic, glaucoma, therapy and prophylaxis of diabetic complications, complications of vascular or cardiac surgery or after organ transplantation, complications of cyclosporin treatment, pain, addictions, schizophrenia, Alzheimer's disease, anxiety, obsessive-compulsive behavior, epileptic seizures, stress, depression, dementias, neuromuscular disorders, neurodegenerative diseases, as well as other diseases related to a dysregulation of urotensin II or urotensin II receptors.

These compositions may be administered in enteral or oral form e.g. as tablets, dragees, gelatine capsules, emulsions, solutions or suspensions, in nasal form like sprays or rectally in form of suppositories. These compounds may also be administered in intramuscular, parenteral or intravenous form, e.g. in form of injectable solutions.

These pharmaceutical compositions may contain the compounds of formula 1 as well as their pharmaceutically acceptable salts in combination with inorganic and/or organic excipients, which are usual in the pharmaceutical industry, like lactose, maize or derivatives thereof, talcum, stearic acid or salts of these materials.
For gelatine capsules vegetable oils, waxes, fats, liquid or half-liquid polyols etc. may be used. For the preparation of solutions and sirups e.g. water, polyols, saccharose, glucose etc. are used. Injectables are prepared by using e.g. water, polyols, alcohols, glycerin, vegetable oils, lecithin, liposomes etc. Suppositories are prepared by using natural or hydrogenated oils, waxes, fatty acids (fats), liquid or half-liquid polyols etc.

The compositions may contain in addition preservatives, stabilisation improving substances, viscosity improving or regulating substances, solubility improving substances, sweeteners, dyes, taste improving compounds, salts to change the osmotic pressure, buffer, anti-oxidants etc.

The compounds of general formula 1 may also be used in combination with one or more other therapeutically useful substances e.g. α- and β-blockers like phentolamine, phenoxybenzamine, atenolol, propranolol, timolol, metoprolol, carteolol, carvedilol, etc.; with vasodilators like hydralazine, minoxidil, diazoxide, flosequinan, etc.; with calcium-antagonists like diltiazem, nicardipine, nimodipine, verapamil, nifedipine, etc.; with angiotensin converting enzyme-inhibitors like cilazapril, captopril, enalapril, lisinopril etc.; with potassium channel activators like pinacidil, chromakalim, etc.; with angiotensin receptor antagonists like losartan, valsartan, candesartan, irbesartan, eprosartan, telmisartan, and tasosartan, etc.; with diuretics like hydrochlorothiazide, chlorothiazide, acetolamide, bumetanide, furosemide, metolazone, chlortalidone, etc.; with sympatholytics like methylldopa, clonidine, guanabenz, reserpine, etc.; with endothelin receptor antagonists like bosentan, tezosentan, darusentan, atrasentan, enrasentan, or sitaxsentan, etc.; with anti-hyperlipidemic agents like lovastatin, pravastatin, fluvastatin, atorvastatin, cerivastatin, simvastatin, etc.; and other therapeutics which serve to treat high blood pressure, vascular disease or other disorders listed above.

The dosage may vary within wide limits but should be adapted to the specific situation. In general the dosage given daily in oral form should be between about 3 mg and about 3 g, preferably between about 5 mg and about 1 g, especially preferred between 10 mg and 300 mg, per adult with a body weight of about 70 kg. The dosage should be administered preferably in 1 to 3 doses of equal
weight per day. As usual children should receive lower doses which are adapted to body weight and age.

GENERAL PREPARATION OF COMPOUNDS OF THE INVENTION

Compounds of the general formula 1 can be prepared using methods generally known in the art, according to the general sequence of reactions outlined below. For simplicity and clarity reasons sometimes only a few of the possible synthetic routes that lead to compounds of general formula 1 are described.

For the synthesis of compounds of general formula 1 general synthetic routes illustrated in Schemes A through G can be employed. The generic groups X, Py, R², R¹, R³, R⁴, R⁵, R⁶, R⁷, R⁸ employed in Schemes A through G have the definitions given in general formula 1 above. In some instances the use of protecting groups (PG) will be required. The use of protecting groups is well known in the art (see for example "Protective Groups in Organic Synthesis, T.W. Greene, P.G.M. Wuts, Wiley-Interscience, 1999). For the purposes of this discussion, it will be assumed that protecting groups such as benzylxycarbonyl (Cbz), benzyl (Bn) or tert-butyloxycarbonyl (Boc) are in place.

Preparation of compounds of general formula 1.

These compounds are prepared according to Scheme A.

Scheme A

![Scheme A diagram]

1,3-Disubstituted ureas of general structure I in Scheme A are deprotected at the nitrogen attached to R² according to procedures well known in the art (see for example "Protective Groups in Organic Synthesis, T.W. Greene, P.G.M. Wuts, Wiley-Interscience, 1999) and subsequently alkylated to provide compounds of general formula 1. N-Alkylation is preferentially accomplished by reductive amination, using NaBH₄ as reducing agent in THF, with aldehydes or ketones
that are commercially available or are prepared by methods well-known in the art. Alternatively, N-alkylation can be accomplished, in a polar solvent such as THF in the presence of a small stoichiometric excess of acid scavenger such as Na₂CO₃ or DIPEA, by reaction with halides R¹-X or methanesulfonates R¹-OSO₂CH₃ that are commercially available or are prepared by methods well-known in the art. Alternatively, N-alkylation can be accomplished, in a polar solvent such as THF in the presence of a small stoichiometric excess of acid scavenger such as TEA or DIPEA, by reaction with activated carboxylic acid derivatives that are commercially available or are prepared by methods well-known in the art, followed by reduction of the amide intermediate by treatment with a reducing agent such as LiAlH₄ in an aprotic solvent such as THF at room temperature. The preparation of protected ureas of general structure I is described in Schemes D to F below.

Alternatively, compounds of general formula 1 are prepared according to Scheme B and C.

Racemic or enantiomerically pure amines of general structure IV are either commercially available or readily prepared by methods well known in the art. Pyridine-4-carboxylic acid derivatives of general structure II are commercially available or readily prepared by methods well known in the art. According to Scheme B amines of general structure IV are reacted in a solvent such as CH₂Cl₂ with isocyanates, formed in situ from acids of general structure II via rearrangement of the derived acyl azides, to provide protected ureas of general structure I. Alternatively, ureas of general structure I can be formed by reaction of an amine of general structure IV and an urea of general structure III by heating in a polar solvent such as dioxane or methanol as shown in Scheme C. Ureas of general structure III are prepared according to Scheme G below.
Scheme B:

\[
\begin{align*}
\textbf{II} & \quad \text{1. DPPA, DMF} \\
& \quad 2.100^\circ\text{C, toluene} \\
& \quad 3. \\
& \quad \text{R}^2_\text{N} X \text{N}-\text{NH}_2 \\
& \quad \text{CH}_2\text{Cl}_2, \text{r.t.}
\end{align*}
\]

General Formula I

Protected ureas of general structure I in Scheme A are prepared according to Scheme D below.

Scheme D:

\[
\begin{align*}
\textbf{V} & \quad 1. \text{DPPA, DMF} \\
& \quad 2.100^\circ\text{C, toluene} \\
& \quad 3. \text{Py-NH}_2 (\text{VI}), \\
& \quad \text{CH}_2\text{Cl}_2, \text{r.t.}
\end{align*}
\]

Monoprotected, racemic or enantiomERICally pure carboxylic acids of general structure V are either commercially available or readily prepared by methods well known in the art. 4-Amino-pyridine derivatives of general structure VI are commercially available or readily prepared by methods well known in the art (see for example "A Convenient Preparation of 4-Pyridinamine Derivatives, M. Malinowski, L.Kaczmarek, J. Prakt. Chem. (1988) 330, 154-158"). According to Scheme D 4-amino-pyridine derivatives of general structure VI are reacted in a
solvent such as \( \text{CH}_2\text{Cl}_2 \) with isocyanates, formed in situ from acids of general structure \( \text{V} \) via rearrangement of the derived acyl azides, to provide protected ureas of general structure \( \text{I} \).

Alternatively, protected ureas of general structure \( \text{I} \) in Scheme A are prepared according to Schemes E and F below.

Monoprotected, racemic or enantiomerically pure amines of general structure \( \text{VII} \) are either commercially available or readily prepared by methods well known in the art. According to Scheme E and F, using general methods described in Scheme B and C for the preparation of compounds of general formula 1, amines of general structure \( \text{VII} \) are reacted with isocyanates, formed in situ from acids of general structure \( \text{II} \) to provide protected ureas of general structure \( \text{I} \). Alternatively, amines of general structure \( \text{VII} \) are reacted with an urea of general structure \( \text{III} \) to provide protected ureas of general structure \( \text{I} \).

Scheme E:

\[
\begin{align*}
\text{II} & \quad \text{CO}_2\text{H} \\
& \quad \text{Py}
\end{align*}
\]

1. DPPA, DMF
2. 100°C, toluene
3. CH\(_2\text{Cl}_2\), r.t.

\[
\begin{align*}
\text{VII} & \quad \text{R}^2 \text{N} - \text{PG} - \text{R}^4 \\
& \quad \text{X} - \text{NH}_2
\end{align*}
\]

\[
\begin{align*}
\text{I} & \quad \text{PG} - \text{N} - \text{CH}_2 - \text{X} - \text{NH}_2 - \text{N} - \text{Py}
\end{align*}
\]

Scheme F:

\[
\begin{align*}
\text{III} & \quad \text{Py} - \text{N} - \text{H} - \text{N} - \text{Py}
\end{align*}
\]

\[
\begin{align*}
\text{VII} & \quad \text{R}^2 \text{N} - \text{PG} - \text{R}^4 \\
& \quad \text{X} - \text{NH}_2
\end{align*}
\]

dioxane or MeOH, reflux

\[
\begin{align*}
\text{I} & \quad \text{PG} - \text{N} - \text{CH}_2 - \text{X} - \text{NH}_2 - \text{N} - \text{Py}
\end{align*}
\]
Ureas of general structure III are prepared according to Scheme G below.

Scheme G:

Pyridine-4-carboxylic acid derivatives of general structure II are commercially available or readily prepared by methods well known in the art. 4-Amino-pyridine derivatives of general structure VI are commercially available or readily prepared by methods well known in the art. According to Scheme G 4-amino-pyridine derivatives of general structure VI are reacted in a solvent such as CH₂Cl₂ with isocyanates, formed in situ from acids of general structure II via rearrangement of the derived acyl azides, to provide ureas of general structure III. Alternatively, 4-amino-pyridine derivatives of general structure VI are reacted in a polar, aprotic solvent such as THF with carbonyldimidazole (CDI) to provide ureas of general structure III.

The foregoing general description of the invention will now be further illustrated with a number of non-limiting examples.
EXAMPlES

LIST OF ABBREVIATIONS:

AcOH  acetic acid
aq.   aqueous
5 brine  sat. sodium chloride solution in water
BSA  bovine serum albumin
cat.  catalytic
CDI  carbonyldiimidazole
DIPEA  diisopropylethylamine
10 DMAP  4-dimethylaminopyridine
DMF  dimethylformamide
DMSO  dimethylsulfoxide
DPPA  diphenylphosphorylazide
EDC  N-(3-dimethylaminopropyl)-N'-ethyl-carbodiimide
15 EDTA  ethylenediamine tetra-acetic acid
EtOAc  ethyl acetate
Et2O  diethyl ether
FC  flash chromatography
Fe(acac)3  iron(III)-acetylacetonate
20 Hex  hexane
HOBT  1-hydroxybenzotriazole
HPLC  high performance liquid chromatography
HV  high vacuum conditions
LC-MS  liquid chromatography-mass spectroscopy
25 LiAlH4  lithium aluminum hydride
MeOH methanol
min minutes
MHz megahertz
MPLC medium pressure liquid chromatography
5 NaBH₄C₃ sodium triacetoxyborohydride
NaHMDS sodium bis(trimethylsilyl)amide
NMP N-methylpyrrolidone
NMR nuclear magnetic resonance
ppm part per million
10 PBS phosphate-buffered saline
Pd(dppf)Cl₂ 1,1'-bis(diphenylphosphino)ferrocene-palladium(II)dichloride
dichloromethane complex
PG protecting group
r.t. room temperature
15 sat. saturated
SiO₂ silica gel
TEA triethylamine
TFA trifluoroacetic acid
THF tetrahydrofuran
20 TLC thin layer chromatography
\( t_R \) retention time

Reactions are routinely performed under an inert atmosphere such as \( \text{N}_2 \) gas in air dried glassware. Solvents are used as received from the vendor. Evaporations are performed in a rotary evaporator at reduced pressure and a water bath temperature of 50 °C. LC-MS characterizations are performed on a Finnigan HP1100 platform using ESI ionization mode, and positive ion detection with a Navigator AQA detector. Analytical liquid chromatographic separations are
performed on a C18 column of 4.6 x 30 mm dimensions and a mobile phase consisting of a 6 minute gradient of 2 – 95% CH3CN in water containing 0.5% formic acid at a flow rate of 0.45 mL/min. Retention time (tR) is given in min. TLC is performed on pre-coated silica gel 60 F254 glass-backed plates (Merck). MPLC is performed on a Labomatic platform using either SiO2-columns and a mobile phase consisting of heptane-EtOAc, or C18 columns and a mobile phase consisting of water-MeOH. Preparative HPLC is performed on a Varian/Gilson platform using a C18 column of 21 x 60 mm dimensions and a mobile phase consisting of a gradient of 2 - 95% CH3CN in water containing 0.5% formic acid.

10 **Preparation of Intermediates. Example A.**

**A1. 1-Benzyl-pyrrolidin-3-ylamine.**

![1-Benzyl-pyrrolidin-3-ylamine](image)

This material is commercially available in racemic and both enantiomerically pure forms.

15 **A2. 3-Amino-pyrrolidine-1-carboxylic acid tert-butyl ester.**

![3-Amino-pyrrolidine-1-carboxylic acid tert-butyl ester](image)

This material is commercially available in racemic form.

**A3. Pyrrolidin-3-yl-carbamic acid tert-butyl ester.**

![Pyrrolidin-3-yl-carbamic acid tert-butyl ester](image)

This material is commercially available in racemic and both enantiomerically pure forms.
A4. 3-Amino-piperidine-1-carboxylic acid tert-butyl ester.

This material is commercially available in racemic form.

A5. (S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-ylamine.

A5.1. [(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester.

A mixture of (S)-pyrrolidin-3-yl-carbamic acid tert-butyl ester (Example A3., 2.5 g, 13.4 mmol), diphenylacetaldehyde (2.63 g, 13.4 mmol) and NaBHAc3 (4.0 g, 19 mmol) in THF (80 mL) is stirred at r.t. for 6 h. The mixture is diluted with CH₂Cl₂ (150 mL) and washed with sat. aq. Na₂CO₃ (2 x 50 mL) and sat. aq. NaCl (50 mL). The organic phase is dried (Na₂SO₄), filtered and evaporated. The residue is purified by FC (SiO₂, EtOAc-heptane) to provide the title compound.

A5.2. (S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-ylamine.

To a solution of [(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester (4.37 g, 11.9 mmol) in CHCl₃ (50 mL) is added TFA (20 mL) and the mixture is stirred at r.t. for 2 h. The mixture is evaporated, the residue dissolved in CH₂Cl₂ (100 mL) and stirred with aq. NaOH (1M, 100 mL) for 1 h. The phases are separated and the aq. phase is extracted with CH₂Cl₂ (2 x 30 mL). The combined organic extracts are dried (Na₂SO₄), filtered and evaporated to provide the title compound.
The following compounds are prepared from the appropriate stereoisomer of pyrrolidin-3-yl-carbamic acid tert-butyl ester (Example A3) and commercially available aldehydes or ketones using the method described in Example A5.

A9. (S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-ylamine.

\[
\begin{align*}
\text{A9.1. } & [(S)-1-(3,3-Diphenyl-propionyl)-pyrrolidin-3-yl]-\text{carbamic acid tert-butyl ester.}
\end{align*}
\]

To a cooled (0°C) mixture of (S)-pyrrolidin-3-yl-carbamic acid tert-butyl ester (Example A3, 930 mg, 5 mmol), 3,3-diphenylpropionic acid (1.36 g, 6 mmol), HOBT (1.35 g, 10 mmol), TEA (1.4 mL, 10 mmol) and a cat. amount of DMAP in CH\(_2\)Cl\(_2\) (50 mL) is added EDC (1.15 g, 6 mmol). The mixture is stirred at r.t. for 15 h. The mixture is quenched with sat. aq. Na\(_2\)CO\(_3\) (25 mL), the phases are separated, and the aq. phase is extracted with CH\(_2\)Cl\(_2\) (3x 50 mL). The combined organic extracts are dried (Na\(_2\)SO\(_4\)), filtered and evaporated. The residue is purified by FC (SiO\(_2\), EtOAc-heptane) to provide the crude title compound.

A9.2. [(S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester.

A solution of [(S)-1-(3,3-diphenyl-propionyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester (1.97 g, 5 mmol) in THF (20 mL) is added to a cooled (0°C) suspension of LiAlH\(_4\) (760 mg, 20 mmol) in THF (100 mL) and the mixture is warmed to r.t. during 15 h. The reaction mixture is carefully added to EtOAc (250
mL) and MeOH (30 mL), and, subsequently, sat. aq. NaHCO₃ (25 mL) are added until a filterable precipitate has formed. The mixture is filtered, the filtercake washed with MeOH (2 x 50 mL), and the filtrate is evaporated. The residue is taken up in a minimal amount of MeOH, diluted with CH₂Cl₂ (300 mL), dried (Na₂SO₄), filtered and evaporated. The residue is purified by FC (SiO₂, EtOAc-heptane) to provide the title compound.

A9.3. (S)-1-(3,3-Diphenyl-propyl)-pyrrolidin-3-ylamine.

To a solution of [(S)-1-(3,3-diphenyl-propyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester (1.97 g, 5 mmol) in CHCl₃ (50 mL) is added TFA (20 mL) and the mixture is stirred at r.t. for 2 h. The mixture is evaporated, the residue dissolved in CH₂Cl₂ (100 mL) and stirred with aq. NaOH (1M, 100 mL) for 1 h. The phases are separated and the aq. phase is extracted with CH₂Cl₂ (2 x 30 mL). The combined organic extracts are dried (Na₂SO₄), filtered and dried to provide the title compound.

The following compounds are prepared from the appropriate stereoisomer of pyrrolidin-3-yl-carbamic acid tert-butyl ester (Example A3) and commercially available carboxylic acids using the method described in Example A9.

A mixture of L-prolinamide (121 mg, 1.06 mmol), dibenzylketone (223 mg, 1.06 mmol) and NaBHAc3 (270 mg, 1.27 mmol) in THF (4 mL) is stirred at r.t. for 15 h. The mixture is added to a cooled (0°C) suspension of LiAlH4 (224 mg, 5.3 mmol) in THF (15 mL) and the mixture is warmed to r.t. during 15 h. The reaction mixture is carefully added to EtOAc (100 mL) and MeOH (5 mL), and, subsequently, sat. aq. NaHCO3 (2 mL) are added. The mixture is filtered, the filtercake washed with MeOH (2 x 20 mL), and the filtrate is evaporated. The residue is taken up in a minimal amount of MeOH, diluted with CH2Cl2 (100 mL), dried (Na2SO4), filtered and evaporated. The residue is purified by FC (SiO2, EtOAc-MeOH) to provide the title compound.

![Molecule A14](image)

The compound is prepared from D-prolinamide and dibenzylketone using the method described in Example A13.

A15. 4-[(S)-3-Amino-pyrrolidin-1-yl]-N,N-diethyl-2,2-diphenyl-butyramide.

![Molecule A15](image)

A15.1. 4-Bromo-2,2-diphenyl-butyryl chloride.

Thionylchloride (29 mL, 40 mmol) is added to a mixture of 4-bromo-2,2-diphenyl-butyric acid (3.05 g, 9.5 mmol) in CHCl3 (50 mL) and the mixture is heated at reflux for 3 h. The mixture is evaporated in vacuo to provide the crude title compound.
A15.2. [(S)-1-(3-Diethylcarbamoyl-3,3-diphenyl-propyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester.

A solution of 4-bromo-2,2-diphenyl-butyryl chloride (509 mg, 1.5 mmol) in CH₂Cl₂ (20 mL) is cooled at -10°C and a solution of diethylamine (110 mg, 1.5 mmol) in CH₂Cl₂ (5 mL) is added, followed after 20 min by a solution of TEA (0.21 mL, 1.5 mmol) in CH₂Cl₂ (5 mL). The mixture is stirred for 10 min at -10°C and a solution of (S)-pyrrolidin-3-yl-carbamic acid tert-butyl ester (186 mg, 1 mmol) in CH₂Cl₂ (5 mL) is added. The mixture is warmed to r.t. during 15 h, quenched with sat. aq. Na₂CO₃ (50 mL), the phases are separated and the aq. phase is extracted with CH₂Cl₂ (3 x 50 mL). The organic extracts are combined, dried (MgSO₄), filtered and evaporated. The residue is purified by MPLC (SiO₂, EtOAc-heptane) to provide the title compound.

A15.3. 4-((S)-3-Amino-pyrrolidin-1-yl)-N,N-diethyl-2,2-diphenyl-butyramide.

To a solution of [(S)-1-(3-diethylcarbamoyl-3,3-diphenyl-propyl)-pyrrolidin-3-yl]-carbamic acid tert-butyl ester (341 mg, 0.7 mmol) in CHCl₃ (10 mL) is added TFA (5 mL) and the mixture is stirred at r.t. for 0.5 h. The mixture is evaporated, the residue dissolved in CH₂Cl₂ (50 mL) and stirred with aq. NaOH (1M, 30 mL) for 1 h. The phases are separated and the aq. phase is extracted with CH₂Cl₂ (2 x 30 mL). The combined organic extracts are dried (Na₂SO₄), filtered and dried to provide the title compound.

The following compounds are prepared from the appropriate stereoisomer of pyrrolidin-3-yl-carbamic acid tert-butyl ester (Example A3), 4-bromo-2,2-diphenyl-butyryl chloride (Example A15.1.) and commercially available dialkylamines using the method described in Example A15.

**Preparation of Intermediates, Example B.**

**B1. 4-Amino-2-methylquinoline.**

![Chemical Structure](image1)

5 This material is commercially available.

**B2. 1,3-Bis-(2-methyl-quinolin-4-yl)-urea.**

![Chemical Structure](image2)

A suspension of 4-amino-2-methylquinoline (Example B1, 9.49g, 60 mmol) and CDI (4.87g, 20 mmol) in 100ml THF is stirred at r.t. for 0.5h, then 1h at reflux. A second batch of CDI (2.5g, 15.4 mmol) is added and heating continued for 15h. The formed precipitate is filtered, washed with THF (2x50 mL) and ether (3x50 mL) and dried to provide the title compound.

**B3. 2,6-Dimethyl-pyridin-4-ylamine.**

![Chemical Structure](image3)

15 **B3.1. 2,6-Dimethyl-4-nitro-pyridine 1-oxide.**

Lutidine-N-oxide (19 g, 155 mmol) is cooled to 0°C and a mixture of fuming HNO₃ (100 %, 37.5 mL) and conc. H₂SO₄ (95-97%, 52.5 mL), prepared by
addition of H₂SO₄ to HNO₃ at 0°C, is added slowly. The mixture is heated at 80°C for 3h. The mixture is carefully poured into ice-water (500 mL). A white precipitate forms that is filtered. The precipitate is dissolved in CH₂Cl₂ (100 mL) and the filtrate is extracted with CH₂Cl₂ (4x 75 mL). The organic extracts are combined with the dissolved precipitate and washed with sat. aq. NaCl, dried (Na₂SO₄), filtered and evaporated to provide the title compound.

**B3.2. 2,6-Dimethyl-pyridin-4-ylamine.**

2,6-Dimethyl-4-nitro-pyridine 1-oxide (9.62 g, 57 mmol) is dissolved in AcOH (300 mL) and Fe (29 g) is added. The mixture is stirred for 1 h at 100°C. The mixture is cooled to r.t. and filtered. The filtercake is thoroughly washed with AcOH and then discarded. The filtrate is evaporated, diluted with water (100 mL), basified with NaOH (1M, 100 mL), filtered from the formed precipitate and the filtrate is extracted with CHCl₃ (10 x 50 mL). The combined organic extracts are dried (Na₂SO₄), filtered and evaporated. The residue is crystallized from heptane-CHCl₃ to provide the title compound.

**B4. 1,3-Bis-(2,6-dimethyl-pyridin-4-yl)-urea.**

\[
\begin{array}{c}
\text{N} \\
\text{N} \\
\text{O} \\
\text{N} \\
\text{N} \\
\end{array}
\]

2,6-Dimethyl-pyridin-4-ylamine (1.22 g, 10 mmol) is dissolved in dry dioxane (30 mL) and CDI (891 mg, 5.5 mmol) is added. The mixture is heated at 80°C for 1 h. Further CDI (160 mg) is added and stirring is continued for 15 h. The mixture is evaporated and purified by FC (SiO₂, EtOAc-MeOH) to provide the title compound.

**B5. 4-Isocyanato-2-methyl-6-styryl-pyridine.**

\[
\begin{array}{c}
\text{NCO} \\
\end{array}
\]

2,6-Dimethyl-4-nitro-pyridine (1.22 g, 10 mmol) is dissolved in dry dioxane (30 mL) and CDI (891 mg, 5.5 mmol) is added. The mixture is heated at 80°C for 1 h. Further CDI (160 mg) is added and stirring is continued for 15 h. The mixture is evaporated and purified by FC (SiO₂, EtOAc-MeOH) to provide the title compound.
B5.1. 2-Methyl-6-styryl-isonicotinic acid.

A suspension of 2-chloro-6-methyl-isonicotinic acid (171.6 mg, 1 mmol), 2-phenyl-etheneboronic acid (180.0 mg, 1.2 mmol), K$_2$CO$_3$ (414 mg), Pd(dppf)Cl$_2$-CH$_2$Cl$_2$ (27 mg) in CH$_3$CN-H$_2$O (3:1, 10 mL) is stirred under argon at 90°C for 15 h. The solution is cooled to r.t. and aq. hydrochloric acid (2M, 1.5 mL) is added to adjust the pH at 3. The mixture is evaporated to dryness and purified by MPLC (C18, H$_2$O-MeOH) to provide the title compound.

B5.2. 2-Methyl-6-styryl-isonicotinoyl azide.

To a solution of 2-methyl-6-styryl-isonicotinic acid (214 mg, 0.89 mmol) in DMF (5 mL) is added at 0°C TEA (0.21 mL, 1.5 mmol) and slowly (30 min) DPPA (366 mg, 1.33 mmol). The reaction mixture is stirred for 0.5 h at 0°C and 0.5 h at r.t. The reaction is quenched with ice (20 g) and extracted with Et$_2$O (6 x 30 mL). The combined organic extracts are washed successively with saturated NaHCO$_3$ (2 x 15 mL) and water (2 x 10 mL), and are evaporated in vacuo without heating. The residue is purified by FC (SiO$_2$, EtOAc-heptane) to provide the title compound.

B5.3. 4-Isocyanato-2-methyl-6-styryl-pyridine.

2-Methyl-6-styryl-isonicotinoyl azide (79.9 mg, 0.3 mmol) is dissolved in dry toluene (4 mL) and heated at reflux for 2h. The resulting solution of the title product is carried forward without further isolation of the title compound.

B6. 2-[2-(4-Fluoro-phenyl)-vinyl]-4-isocyanato 6-methyl- pyridine.

![NCO]

The title compound is prepared from 2-(4-fluoro-phenyl)-etheneboronic acid and 2-chloro-6-methyl-isonicotinic acid using the method described in Example B5.
**B7. 4-Isocyanato-2-methyl-6-phenethyl-pyridine.**

![Chemical Structure](image)

**B7.1. 2-Chloro-6-methyl-isonicotinic acid tert-butyl ester.**

*N,N*-dimethylformamide-di-tert.-butyl-acetal (19 mL, 80 mmol) is added during 40 min to a hot (65°C, flask temperature) suspension of 2-chloro-6-methyl-isonicotinic acid (3.40 g, 19.8 mmol) in dry toluene (100 mL). The clear orange solution is stirred at 80°C for 48 h, cooled to r.t. and diluted with toluene (100 mL). The solution is washed with water (2 x 40 mL), sat. aq. NaHCO$_3$ (3 x 30 mL) and sat. aq. NaCl (25 mL), dried (Na$_2$SO$_4$), filtered and evaporated. The residue is purified by FC (SiO$_2$, CH$_2$Cl$_2$-MeOH) to provide the title compound.

**B7.2. 2-Methyl-6-phenethyl-isonicotinic acid.**

A solution of phenethylmagnesiumbromide (freshly prepared from phenethylbromide (0.66 g, 3.6 mmol) and magnesium (0.083 g, 3.4 mmol)) in ether (10 mL) is added to a cooled (-40°C) and mechanically stirred solution of 2-chloro-6-methyl-isonicotinic acid tert-butyl ester (Example B7.1, 0.76 g, 3.34 mmol), Fe(acac)$_3$ (21.2 mg, 0.06 mmol) and NMP (0.6 mL) in THF (60 mL). The mixture is warmed to r.t. during 0.5 h, diluted with ether (150 mL) and quenched with aq. KHSO$_4$ (1M, 40 mL). The phases are separated and the aq. phase is extracted with ether (2 x 50 mL). The combined organic extracts are dried (MgSO$_4$), filtered and evaporated. The residue is purified by MPLC (C18, MeOH-H$_2$O) and the 2-methyl-6-phenethyl-isonicotinic acid tert-butyl ester dissolved in CH$_2$Cl$_2$ (10 mL). TFA (10 mL) is added and the mixture stirred at r.t. for 0.5 h. The mixture is evaporated and the residue dried in HV to provide the title compound.
B7.3. 2-Methyl-6-phenethyl-isonicotinoyl azide.

The title compound is prepared from 2-methyl-6-phenethyl-isonicotinic acid using the method described in Example B5.2.

B7.4. 4-Isocyanato-2-methyl-6-phenethyl-pyridine.

The title compound is prepared from 2-methyl-6-phenethyl-isonicotinoyl azide using the method described in Example B5.3.

B8. 2-Ethyl-4-isocyanato-6-methyl-pyridine.

The title compound is prepared from 2-chloro-6-methyl-isonicotinic acid tert-butyl ester (Example B7.1.) and ethylbromide using the method described in Example B7.

B9. 4-Isocyanato-2-methyl-6-propyl-pyridine.

The title compound is prepared from 2-chloro-6-methyl-isonicotinic acid tert-butyl ester (Example B7.1.) and propylbromide using the method described in Example B7.

B10.1. 2-(Benzyl-methyl-amino)-isonicotinic acid.

A mixture of 2-chloro-pyridine-4-carboxylic acid (300 mg, 1.9 mmol), benzylmethylamine (230 mg, 1.9 mmol) and triethylamine (192 mg, 1.9 mmol) is heated at 120°C for 12 h. The residue is dissolved in CH₂Cl₂ (30 mL) and extracted with 1M aq. NaOH (3 x 5 mL). The aq. layer is adjusted to pH 1-2 with 12N aq. HCl and extracted with EtOAc (6 x 5 mL). The organic extracts are combined, dried (MgSO₄), and evaporated to provide the title compound.

B10.2. 2-(Benzyl-methyl-amino)-isonicotinoyl azide.

The title compound is prepared from 2-methyl-6-phenethyl-isonicotinic acid using the method described in Example B5.2.

B10.3. Benzyl-(4-isocyanato-pyridin-2-yl)-methyl-amine.

The title compound is prepared from 2-methyl-6-phenethyl-isonicotinoyl azide using the method described in Example B5.3.

B11. (6-Chloro-4-isocyanato-pyridin-2-yl)-propyl-amine.

B11.1. 2-Chloro-6-propyramino-isonicotinic acid.

A mixture of n-propyamine (590 mg, 10 mmol) and 2,6-dichloroisonicotinic acid (192 mg, 1 mmol) is heated in a screw cap vial at 110°C for 48 h. The excess amine is evaporated and the mixture is poured into 2M aq. HCl (30 mL) and washed with CH₂Cl₂ (3x30 mL), the organic extracts are combined, dried (Na₂SO₄), filtered and evaporated. The residue is suspended in MeOH (1 mL) and diluted with 1M aq. HCl (10 mL). The suspension is heated at 60 °C and the formed precipitate is filtered, washed with HCl (10 mL) and water (3x 10 mL) and the solid is dried in HV to provide the title compound.
B11.2. 2-Chloro-6-propylamino-isonicotinoyl azide.

The title compound is prepared from 2-chloro-6-propylamino-isonicotinic acid using the method described in Example B5.2.

B11.3. (6-Chloro-4-isocyanato-pyridin-2-yl)-propylamine.

The title compound is prepared from 2-chloro-6-propylamino-isonicotinoyl azide using the method described in Example B5.3.

B12. (6-Chloro-4-isocyanato-pyridin-2-yl)-cyclopentyl-amine.

![Chemical structure]

The title compound is prepared from cyclopentylamine and 2,6-dichloroisonicotinic acid using the method described in Example B11.

![Chemical structure]

The title compound is prepared from benzylamine and 2,6-dichloroisonicotinic acid using the method described in Example B11.

15 Preparation of Intermediates. Example C.

C1. 1-(2-Methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea.

![Chemical structure]
C1.1. 3-[3-(2-Methyl-quinolin-4-yl)-ureido]-pyrrolidine-1-carboxylic acid tert-butyl ester.

A suspension of 3-amino-pyrrolidine-1-carboxylic acid tert-butyl ester (Example A2, 820 mg, 4.4 mmol) and 1,3-bis-(2-methyl-quinolin-4-yl)-urea (Example B2, 1.51g 4.4 mmol) in MeOH (20 mL) is heated at reflux for 15h. The mixture is cooled to r.t. and poured into sat. Na₂CO₃-solution (30 mL). The aq. phase is extracted with CH₂Cl₂ (4x50 mL), the organic extracts are washed with 1M-NaH₂PO₄ (50 mL) and brine (50 mL), dried and evaporated. The residue is purified by flash chromatography (SiO₂, CH₂Cl₂-MeOH) to provide the title compound.

C1.2. 1-(2-Methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea dihydrochloride.

A solution of 3-[3-(2-methyl-quinolin-4-yl)-ureido]-pyrrolidine-1-carboxylic acid tert-butyl ester (Example C1.1, 740 mg, 2 mmol) in dioxane (10 mL) is treated with 4M-HCl in dioxane (2 mL) for 3h. The white precipitate is filtered, washed with ether and dried to provide the title compound as the dihydrochloride salt.

C1.3. 1-(2-Methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea.

A solution of 1-(2-methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea dihydrochloride (Example C1.2, 343.3 mg, 1 mmol) in MeOH (2 mL) is added to 1M-NaOH (10 mL) and the aq. phase extracted with CH₂Cl₂ (4x20 mL). The organic extracts are dried (Na₂SO₄), filtered and evaporated to provide the title compound.

Alternatively, the title compound can be prepared in racemic or enantiomerically pure form by hydrogenation of 1-(1-benzyl-pyrrolidin-3-yl)-3-(2-methyl-quinolin-4-yl)-urea (Examples 20.-22.) using the method described in Example 54.

C2. 1-(2-Methyl-quinolin-4-yl)-3-piperidin-3-yl-urea.
The title compound is prepared from 3-amino-piperidine-1-carboxylic acid tert-butyl ester (Example A4.) and 1,3-bis-(2-methyl-quinolin-4-yl)-urea (Example B2) using the method described in Example C1.

**PREPARATION OF FINAL PRODUCTS**

5

**Example 1.**

1-[1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea.

![Chemical structure](image)

A solution of 1-(2-methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea dihydrochloride (Example C1.2., 51.5 mg, 0.15 mmol), TEA (70 μL, 0.5 mmol), NaBHAc₃ (67 mg, 0.32 mmol) and diphenylacetalddehyde (36 μL, 0.20 mmol) in dry THF (1.5 mL) is stirred at r.t. for 15h, then the solvent is evaporated and the residue purified by HPLC to provide the title compound.

**Example 2.**

1-[1-(1-Benzyl-2-phenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea.

![Chemical structure](image)

A solution of 1-(2-methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea dihydrochloride (Example C1.2., 51.5 mg, 0.15 mmol), TEA (70 μL, 0.5 mmol), NaBHAc₃ (67 mg, 0.32 mmol) and dibenzylketone (42.1 mg, 0.2 mmol) in dry THF (1.5 mL) is
stirred at r.t. for 15h, then the solvent is evaporated and the residue purified by prep. HPLC to provide the title compound.

The following examples are prepared from the appropriate stereoisomer or the racemic mixture of Example C1.2 and commercially available aldehydes or, respectively, ketones using the method described in Example 1 or, respectively, Example 2.

Example 11.

1-[1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea.

Example 11.1.

1-[1-(3,3-Diphenyl-propionyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea.

To a cooled (0°C) mixture of 1-(2-methyl-quinolin-4-yl)-3-pyrrolidin-3-yl-urea dihydrochloride (Example C12., 172 mg, 0.5 mmol), 3,3-diphenylpropionic acid (135.8 mg, 0.6 mmol), HOBT (81 mg, 0.6 mmol), TEA (0.28 mL, 2 mmol) and a cat. amount of DMAP in CH₂Cl₂ (20 mL) is added EDC (115 mg, 0.6 mmol). The mixture is stirred at r.t. for 48 h. The mixture is quenched with sat. aq. Na₂CO₃ (25 mL), the phases are separated, and the aq. phase is extracted with CH₂Cl₂ (3 x 50 mL). The combined organic extracts are dried (Na₂SO₄), filtered and evaporated to provide the crude title compound.

Example 11.2.

1-[1-(3,3-Diphenyl-propyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea.

The crude 1-[1-(3,3-diphenyl-propionyl)-pyrrolidin-3-yl]-3-(2-methyl-quinolin-4-yl)-urea (Example 11.1.) is dissolved in THF (5 mL) and added to a cooled (0°C) suspension of LiAlH₄ (100 mg, 2.5 mmol) in THF (20 mL). The mixture is warmed during 15 h to r.t. The reaction mixture is carefully added to EtOAc (100 mL) and MeOH (5 mL), and, subsequently, sat. aq. NaHCO₃ (2 mL) is added. The mixture is filtered, the filtercake washed with MeOH (2 x 50 mL), and the filtrate is evaporated. The residue is taken up in a minimal amount of MeOH, diluted with
CH$_2$Cl$_2$, dried (Na$_2$SO$_4$), filtered and evaporated. The residue is purified by HPLC to provide the title compound.

The following examples are prepared from Example C1.2, or Example C2, and commercially available carboxylic acids using the method described in Example 11.

Example 54.

1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-methylamino-pyridin-4-yl)-urea.

A suspension of 1-[(2-benzyl-methyl-amino)-pyridin-4-yl]-3-[(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea (Example 51, 151.7 mg, 0.3 mmol) and Pd-C 10 % (50 mg) in MeOH (10 mL) is stirred at r.t. under hydrogen (7 bar) for 72 h. The catalyst is filtered off, the reaction mixture evaporated and the residue purified by HPLC to provide the title compound.

Example 55.

1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-propylamino-pyridin-4-yl)-urea.
Example 55.1.
1-(2-Chloro-6-propylamino-pyridin-4-yl)-3-[1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea.

The title compound is prepared from (S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-ylamine (Example A5.) and (6-chloro-4-isocyanato-pyridin-2-yl)-propyl-amine (Example B11.) using the method described in Example 42.

Example 55.2.
1-[(S)-1-(2,2-Diphenyl-ethyl)-pyrrolidin-3-yl]-3-(2-propylamino-pyridin-4-yl)-urea.

The title compound is prepared from 1-(2-chloro-6-propylamino-pyridin-4-yl)-3-[1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea using the method described in Example 52.

The following compounds are prepared in an analogous fashion.

EXAMPLE 58. IN VITRO BIOLOGICAL CHARACTERIZATION

The inhibitory activity of the compounds of general formula 1 on the actions of urotensin II can be demonstrated using the test procedures described hereinafter:

1) INHIBITION OF HUMAN [$^{125}$I]-UROTENSIN II BINDING TO A RHABDOMYOSARCOMA CELL LINE

Whole cell binding of human [$^{125}$I]-urotensin II is performed using human-derived TE-671 rhabdomyosarcoma cells (Deutsche Sammlung von Mikroorganismen und Zellkulturen, cell line #ACC-263), by methods adapted from a whole cell endothelin binding assay (Breu V et al., In vitro characterization of Ro-46-2005, a novel synthetic non-peptide antagonist of ET$_A$ and ET$_B$ receptors. FEBS Lett. 1993, 334, 210-214).

The assay is performed in 250 µL Dubecco’s modified eagle medium, pH 7.4 (GIBCO BRL, CatNo 31885-023), including 25 mM HEPES (Fluka, CatNo 05473), 1.0 % DMSO (Fluka, CatNo 41644) and 0.5% (w/v) BSA Fraction V (Fluka, CatNo 05473) in polypropylene microtiter plates (Nunc, CatNo 442587). 300'000 suspended cells are incubated with gentle shaking for 4 h at 20°C with 20 pM human [$^{125}$I]Urotensin II (Anawa Trading SA, Wangen, Switzerland, 2130Ci/mmol) and increasing concentrations of unlabeled antagonist. Minimum and maximum binding are derived from samples with and without 100 nM unlabelled U-II, respectively. After the 4 h incubation period, the cells are filtered onto GF/C filterplates (Packard, CatNo 6005174). The filter plates are dried, and then 50 µL scintillation cocktail (Packard, MicroScint 20, CatNo 6013621) is added to each well. The filterplates are counted in a microplate counter (Packard Bioscience, TopCount NXT).

All test compounds are dissolved and diluted in 100% DMSO. A ten-fold dilution into assay buffer is performed prior to addition to the assay. The final concentration of DMSO in the assay is 1.0%, which is found not to interfere with the binding. IC50 values are defined as the concentration of antagonist inhibiting 50% of the specific binding of [$^{125}$I]human U-II. Specific binding is the difference
between maximum binding and minimum binding, as described above. An IC₅₀ value of 0.206 nM is found for unlabeled human U-II. The compounds of the invention are found to have IC₅₀ values ranging from 1 to 1000 nM in this assay.

2) **Inhibition of Human Urotensin II-induced Contractions on Isolated Rat Thoracic Aorta:**

Adult Wistar rats are anesthetized and exsanguinated. The thoracic aorta is excised, dissected and cut in 3-5 mm rings. The endothelium is removed by gentle rubbing of the intimal surface. Each ring is suspended in a 10 mL isolated organ bath filled with Krebs-Henseleit solution (in mM; NaCl 115, KCl 4.7, MgSO₄ 1.2, KH₂PO₄ 1.5, NaHCO₃ 25, CaCl₂ 2.5, glucose 10) kept at 37°C and gassed with 95% O₂ and 5% CO₂. The rings are connected to force transducers and isometric tension is recorded (EMKA Technologies SA, Paris, France). The rings are stretched to a resting tension of 3g. Cumulative doses of human urotensin II (10⁻¹² M to 10⁻⁶ M) are added after a 10 min incubation with the test compound or its vehicle. The functional inhibitory potency of the test compound is assessed by calculating the concentration ratio, i.e. the shift to the right of the EC₅₀ induced by a 10⁻⁵ M concentration of test compound. EC₅₀ is the concentration of urotensin needed to get a half-maximal contraction; pA₂ is the negative logarithm of the theoretical antagonist concentration which induces a two-fold shift in the EC₅₀ value.
CLAIMS

1. Compounds of the general formula 1,

\[
\text{General Formula 1}
\]

wherein:

Py represents quinolin-4-yl which is unsubstituted or mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2, 6 or 8; [1,8]naphthyridin-4-yl which is unsubstituted or monosubstituted in position 7 with lower alkyl; pyridin-4-yl which is unsubstituted or disubstituted in positions 2 and 6, whereby the substituent in position 2 is \(R^5R^6\text{N}^-\), lower alkyl, aryl-lower alkyl, or \((E)\)-2-aryl-ethen-1-yl and the substituent in position 6 is hydrogen or lower alkyl;

X is absent or represents a methylene group;

\(R^1\) represents hydrogen; lower alkyl; aryl; aryl-lower alkyl; lower alkyl disubstituted with aryl; or lower alkyl disubstituted with aryl and additionally substituted at a carbon atom bearing an aryl group with OH, CN, or \(\text{CONR}^7\text{R}^8\);

\(R^2\) forms together with \(R^3\) a five-, six-, or seven-membered ring containing the nitrogen atom to which \(R^2\) is attached as a ring atom and in which case \(R^4\) represents hydrogen; or

\(R^2\) forms together with \(R^4\) a five-, six-, or seven-membered ring containing the nitrogen atom to which \(R^2\) is attached as a ring atom and in which case \(R^3\) represents hydrogen;

the rings formed between \(R^2\) and \(R^3\) or between \(R^2\) and \(R^4\) are unsubstituted or monosubstituted with lower alkyl, aryl, aryl-lower alkyl, hydroxy, or aryloxy;
R^5 and R^6 independently represent hydrogen; lower alkyl; aryl; aryl-lower alkyl; or form together with the nitrogen atom to which they are attached a pyrrolidine, piperidine, or morpholine ring;

R^7 and R^8 independently represent hydrogen; lower alkyl; aryl; aryl-lower alkyl; or form together with the nitrogen atom to which they are attached a pyrrolidine, piperidine, or morpholine ring;

and optically pure enantiomers or diastereomers, mixtures of enantiomers or diastereomers, diastereomeric racemates, and mixtures of diastereomeric racemates; as well as their pharmaceutically acceptable salts, solvent complexes, and morphological forms.

2. Compounds of general formula 1 are the compounds wherein R^3 forms together with R^2 an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which R^2 is attached as a ring atom, R^4 is hydrogen and Py, X, and R^1 have the meaning given in general formula 1 above.

3. Compounds of general formula 1 are the compounds wherein R^4 forms together with R^2 an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which R^2 is attached as a ring atom, R^3 is hydrogen and Py, X, and R^1 have the meaning given in general formula 1 above.

4. Compounds of general formula 1 are the compounds wherein Py represents quinolin-4-yl mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2 or 8, and R^1, R^2, R^3, R^4, and X have the meaning given in general formula 1 above.

5. Compounds of general formula 1 are the compounds wherein Py represents pyridin-4-yl substituted in position 2 with R^5R^6N-, wherein R^5 represents lower alkyl and R^6 represents aryl-lower alkyl, and R^1, R^2, R^3, R^4, and X have the meaning given in general formula 1 above.
6. Compounds of general formula 1 are the compounds wherein Py represents pyridin-4-yl substituted in position 2 with $R^5R^6N^-$, wherein $R^6$ represents hydrogen and $R^1$, $R^2$, $R^3$, $R^4$, $R^5$, and $X$ have the meaning given in general formula 1 above.

7. Compounds of general formula 1 are the compounds wherein $X$ is absent and $R^1$, $R^2$, $R^3$, $R^4$, and Py have the meaning given in general formula 1 above.

8. Compounds of general formula 1 are the compounds wherein Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl, and $R^1$, $R^2$, $R^3$, $R^4$, and $X$ have the meaning given in general formula 1 above.

9. Compounds of general formula 1 are the compounds wherein Py represents pyridin-4-yl disubstituted in position 2 with aryl-lower alkyl and in position 6 with lower-alkyl, and $R^1$, $R^2$, $R^3$, $R^4$, and $X$ have the meaning given in general formula 1 above.

10. Compounds of general formula 1 are the compounds wherein $R^1$ represents lower alkyl disubstituted with aryl and $R^2$, $R^3$, $R^4$, $X$, and Py have the meaning given in general formula 1 above.

11. Compounds of general formula 1 are the compounds wherein $R^1$ represents lower alkyl disubstituted with aryl and additionally substituted at a carbon atom bearing an aryl group with OH, CN, or CONR$^7R^8$, and $R^2$, $R^3$, $R^4$, $R^7$, $R^8$, $X$, and Py have the meaning given in general formula 1 above.

12. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, Py represents quinolin-4-yl mono- or disubstituted independently with lower alkyl or aryl-lower alkyl in the positions 2 or 8, and $R^1$ has the meaning given in general formula 1 above.

13. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is
hydrogen, Py represents pyridin-4-yl substituted in position 2 with $R^6R^6\text{N}$-, wherein $R^6$ represents aryl-lower alkyl and $R^5$ represents lower alkyl, and $R^1$ has the meaning given in general formula 1 above.

14. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, Py represents pyridin-4-yl substituted in position 2 with $R^5R^6\text{N}$-, wherein $R^6$ represents hydrogen, and $R^1$, and $R^5$ have the meaning given in general formula 1 above.

15. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl, and $R^1$ has the meaning given in general formula 1 above.

16. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 with aryl-lower alkyl and in position 6 with lower-alkyl, and $R^1$ has the meaning given in general formula 1 above.

17. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-, six-, or seven-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, $R^1$ represents lower alkyl disubstituted with aryl, and Py has the meaning given in general formula 1 above.

18. Compounds of general formula 1 are the compounds wherein $X$ is absent, $R^3$ forms together with $R^2$ an unsubstituted five-membered ring containing the nitrogen atom to which $R^2$ is attached as a ring atom, $R^4$ is hydrogen, Py represents quinolin-4-yl monosubstituted with lower alkyl or aryl-lower alkyl in the position 2 and $R^1$ has the meaning given in general formula 1 above.
19. Compounds of general formula 1 are the compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl substituted in position 2 with \( R^5 R^6 N \), wherein \( R^6 \) represents hydrogen and \( R^1 \), and \( R^5 \) have the meaning given in general formula 1 above.

20. Compounds of general formula 1 are the compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, Py represents pyridin-4-yl disubstituted in position 2 and 6 with lower-alkyl and \( R^1 \) has the meaning given in general formula 1 above.

21. Compounds of general formula 1 are the compounds wherein X is absent, \( R^3 \) forms together with \( R^2 \) an unsubstituted five-membered ring containing the nitrogen atom to which \( R^2 \) is attached as a ring atom, \( R^4 \) is hydrogen, \( R^1 \) represents lower alkyl disubstituted with aryl, and Py has the meaning given in general formula 1 above.

22. The compound according to any one of claims 1 to 21 that is selected from the group consisting of:

1-\((2\text{-Methyl-quinolin-4-yl})-3\text{-pyrrolidin-3-yl-urea};\)

20

1-\([1-(2,2\text{-Diphenyl-ethyl})\text{-pyrrolidin-3-yl]}-3-(2\text{-methyl-quinolin-4-yl})\text{-urea};\)

1-(2-Cyclopentylamino-pyridin-4-yl)-3-[(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea;
1-(2-Benzylamino-pyridin-4-yl)-3-[(S)-1-(2,2-diphenyl-ethyl)-pyrrolidin-3-yl]-urea.

23. Pharmaceutical compositions containing a compound of any one of claims 1 to 22 and usual carrier materials and adjuvants for the treatment of disorders which are associated with a dysregulation of urotensin II or urotensin II receptors, especially disorders associated with vascular or myocardial dysfunction, comprising hypertension, atherosclerosis, angina or myocardial ischemia, congestive heart failure, cardiac insufficiency, cardiac arrhythmias, renal ischemia, chronic kidney disease, renal failure, stroke, cerebral vasospasm, cerebral ischemia, dementia, migraine, subarachnoidal hemorrhage, diabetes, diabetic arteriopathy, diabetic nephropathy, connective tissue diseases, cirrhosis, asthma, chronic obstructive pulmonary disease, high-altitude pulmonary edema, Raynaud’s syndrome, portal hypertension, thyroid dysfunction, pulmonary edema, pulmonary hypertension, or pulmonary fibrosis.

24. Pharmaceutical compositions containing a compound of any one of claims 1 to 22 and usual carrier materials and adjuvants for the treatment of disorders comprising prevention of restenosis after balloon or stent angioplasty, cancer, prostatic hypertrophy, erectile dysfunction, hearing loss, amaurosis, chronic bronchitis, asthma, gram negative septicemia, shock, sickle cell anemia, glomerulonephritis, renal colic, glaucoma, therapy and prophylaxis of diabetic complications, complications of vascular or cardiac surgery or after organ transplantation, complications of cyclosporin treatment, pain, addictions, schizophrenia, Alzheimer’s disease, anxiety, obsessive-compulsive behavior, epileptic seizures, stress, depression, dementias, neuromuscular disorders, neurodegenerative diseases.

25. The use of one or more compounds of any one of claims 1 to 22 in combination with other pharmacologically active compounds for the treatment of disorders comprising hypertension, atherosclerosis, angina or myocardial ischemia, congestive heart failure, cardiac insufficiency, cardiac arrhythmias, renal ischemia, chronic kidney disease, renal failure, stroke, cerebral vasospasm, cerebral ischemia, dementia, migraine, subarachnoidal
hemorrhage, diabetes, diabetic arteriopathy, diabetic nephropathy, connective tissue diseases, cirrhosis, asthma, chronic obstructive pulmonary disease, high-altitude pulmonary edema, Raynaud's syndrome, portal hypertension, thyroid dysfunction, pulmonary edema, pulmonary hypertension, or pulmonary fibrosis, restenosis after balloon or stent angioplasty, cancer, prostatic hypertrophy, erectile dysfunction, hearing loss, amaurosis, chronic bronchitis, asthma, gram negative septicemia, shock, sickle cell anemia, glomerulonephritis, renal colic, glaucoma, therapy and prophylaxis of diabetic complications, complications of vascular or cardiac surgery or after organ transplantation, complications of cyclosporin treatment, pain, addiction, schizophrenia, Alzheimer's disease, anxiety, obsessive-compulsive behavior, seizures, stress, depression.

26. The use of one or more compounds of any one of claims 1 to 22 in combination with other pharmacologically active compounds comprising ACE inhibitors, angiotensin II receptor antagonists, endothelin receptor antagonists, vasopressin antagonists, beta-adrenergic antagonists, alpha-adrenergic antagonists, vasopressin antagonists, TNFalpha antagonists, or peroxisome proliferator activator receptor modulators for the treatment of disorders given in any one of claims 23 to 25.

27. The method of treating a patient suffering from a disorder given in any one of claims 23 to 25 by administering a pharmaceutical composition according to any one of claims 23-24.
