(54) **An ignition device for a flame burner or the like permitting a limitation of radio interferences**

(57) The present invention proposes a solution alternative to the use of the conventional anti-atmospheric filters in order to make the functioning of the ignition device of a burner or the like acceptable with regard to the electro-magnetic compatibility and the atmospheric.

The said solution permits to reach practical advantages

relative to the fact that first of all the adopted measures are more economic than the known filters and solutions and above all these measures permit to reduce the dimensions of encumbrance to a minimum so that the same solution may be adopted also in those appliances in which the available spaces are reduced to the simplest terms.
