UNITED STATES PATENT OFFICE.

MARY LOUISE KAYSER, OF TYLER, TEXAS.

BOTTLE-HOLDER.

1,286,649. Specification of Letters Patent. Patented Dec. 3, 1918.

Application filed December 28, 1916. Serial No. 139,244.

To all whom it may concern:

Be it known that I, MARY LOUISE KAYSER, a citizen of the United States, and a resident of Tyler, in the county of Smith and State of Texas, have invented certain new and useful Improvements in Bottle-Holders, of which the following is a specification.

My invention relates to means for preventing upsetting of bottles on desks or tables, with a particular reference to ink bottles on school children's desks, and the main object thereof is to provide such means in a simple, efficient, and inexpensive form, either for detachable or for permanent connection with a desk or table.

My invention is fully described in the following specification, of which the accompanying drawings form a part, in which like characters refer to like parts in each of the views, and in which:—

Figure 1 is a fragmentary view of a desk or table provided with my detachable bottle holder in side elevation;

Fig. 2 is an end view thereof, from the right hand side of Fig. 1;

Fig. 3 is a section taken on the line 3—3 of Fig. 1; and Fig. 4 is a perspective view of a permanent standard which I may use instead of the detachable standard shown in the preceding figures.

Referring to Figs. 1, 2 and 3, at 5 I have shown a fragment of a desk or table upon which is a standard 6 held by means of a clamp 7 and thumb-screw 8 in immovable relationship with respect to the table, a carrier 9 being slidably held on said standard and in turn supporting a band 10 adjustable as to diameter by means of a hook 11 and holes 12 whereby the band may be fitted to a bottle 13 which it is desired to hold in convenient position against upsetting.

The carrier 9 may be snugly fitted to the standard but I may also provide a spring clip 14 in frictional engagement with the standard whereby the band 10 may be held in a desired vertical adjustment and, as will be understood, I may make the standard and carrier of any desired configuration in cross section.

The standard 15 shown in Fig. 4 is also adapted to receive the carrier 9 but is shown as mounted on a base plate 16 adapted to be secured to the desk or table, as by a screw seated in a hole 17, this form being of minimum cost and is well adapted for use where a permanent bottle position is desired.

While I have shown certain preferred structural details, I do not desire to limit myself thereto but may make changes thereover provided such changes do not depart from the spirit of the invention and come within the scope of the appended claim.

Having fully described my invention, what I claim as new, and desire to secure by Letters Patent, is:—

A holder for holding an ink bottle on a desk or the like, comprising a standard having means, whereby it may be secured to a desk to project from its upper face, a bottle receiving band provided on one side with a rectangular socket in which the standard fits and is adapted to slide, and a spring having its end portions supported in the opposite walls of the socket with its middle portion lying in the socket and engaging the standard, whereby the band will be adjustably held on the standard and, can be readily removed from and applied to the standard.

MARY LOUISE KAYSER.
