(57) **ABSTRACT**

A new and distinct variety of floribunda rose plant, substan-
tially as herein shown and described, characterized particu-
larly by its compact rounded growth habit; large clusters of
lavender flowers having a strong citrus fragrance; glossy dark
green foliage; and resistance to rust and powdery mildew.

1 Drawing Sheet

1

Genus and species: *Rosa hybrida*.
Variety denomination: 'JACperby'.

Origin of the Invention

The present invention relates to a new and distinct variety
of a Floribunda rose plant named 'JACperby' which was
originated by me by crossing the variety JACshok, U.S. Plant
Pat. No. 11,562 (the seed parent), with the variety 'Blue
Bajou', not patented (the pollen parent).

BACKGROUND OF THE INVENTION

The primary objective of this breeding was to produce a
new floribunda rose variety having the following character-
istics: a strong fragrance, lavender flower color, flowers in
large clusters, compact rounded plant habit and dark green
glossy foliage.

BRIEF SUMMARY OF THE INVENTION

The objective was substantially achieved, along with other
desirable improvements, as evidenced by the following
unique combination of characteristics, that are outstanding in
the new variety, and that distinguish it from its parents, as well
as from all other varieties of which I am aware:

1. Strong citrus fragrance.
2. Large clusters of nine to eleven flowers.
3. Compact rounded growth habit.
4. Dark green glossy foliage.
5. Attractive lavender flower color.

Asexual reproduction of this new variety by cuttings, as
performed at Wasco, Calif., shows that the foregoing and all
other characteristics and distinctions come true to form and
are established and transmitted through succeeding propaga-
tions.

Comparison with Parents

The female parent 'JACshok' has flowers with 25 to 30
petals, and clusters of three to seven flowers, while
'JACperby' has flowers with 20 to 25 petals and clusters of

2

nine to eleven flowers. The male parent 'Blue Bajou' is very
susceptible to powdery mildew, while 'JACperby' is resistant
to powdery mildew.

Comparison with Similar Variety

'JACshok', compared above, is believed to be the most
similar variety.

BRIEF DESCRIPTION OF THE ILLUSTRATION

The accompanying illustration shows typical specimens of
the vegetative growth and flowers of this new variety in dif-
ferent stages of development, depicted in color as nearly true
as it is reasonably possible to make the same in a color
illustration of this character.

DETAILED BOTANICAL DESCRIPTION

The following is a detailed description of my new rose
cultivar with color descriptions using terminology in accor-
dance with The Royal Horticultural Society (London) Colour
Chart © 2001, except where ordinary dictionary significance
of color is indicated. The observations are of plants that were
about 4 years of age (observed from January 2007 to October
2008) and that were grown in a garden environment at Somis,
Calif.

PARENTAGE

Seed parent.—'JACshok' (U.S. Plant Pat. No. 11,562).
Pollen parent.—'Blue Bajou' (not patented).

Flower:

Blooming Habit.—Recurrent.

Bud:

Size.—About 25 mm long and 20 mm in diameter when
the petals start to unfurl.

Form.—The bud form is long and pointed ovoid.

Color.—When sepals first divide, bud color is Purple
Group 76B. When half blown, the upper sides of the
petals are, Purple Group N78B in the center of the

flower and Purple Group N78C on the edges; and the lower sides of the petals are Purple Group 76B.

Sepals.—Color: Upper surface: Green Group 138B overlain in bright sun with Greyed-Purple Group 186B. Lower surface: Yellow-Green Group 146C. Length: 20 to 25 mm. Width: 5 mm. Shape: Subulate. Surface texture: Hoary. There are three lightly appendaged sepals. There are two unappendaged sepals with hairy edges.

Receptacle.—Color: Yellow-Green Group 147B. Shape: Funnel. Size: Medium, about 12 mm long×9 mm wide. Surface: Smooth.

Peduncle.—Length: Medium, averaging about 50 mm. Surface: Smooth. Color: Yellow-Green Group 146D. Strength: Stiff, erect.

Bloom:

Size.—Medium. Average open diameter is about 8 to 9 cm.

Borne.—Several together in clusters of 9 to 11 blooms having a flat shape.

Stems.—Strength: Strong. Average length is about 30 to 35 cm with a diameter of 8 to 9 mm.

Form.—When first open: Bloom is high centered. Permanence: Retains its form to the end; outer petal edges curl slightly.

Petalage.—Number of petals under normal conditions: 20 to 25.

Color.—The upper sides of the petals are Purple Group N78B in the center of the flower and Purple Group N78C on the edges of the flower. The reverse sides of the petals are Purple Group 76B. The base of each petal has 5 mm×5 mm Yellow Group 4D color spot. The major color on the upper side is Purple Group N78B.

Variegations.—None.

Discoloration.—The general tonality at the end of the first day: No change. At the end of the third day: Some fading on outer petals to Purple Group N78C.

Fragrance.—Strong with a citrus character.

Petals:

Thickness.—Thin.

Shape.—Round.

Surface.—Smooth.

Margin.—Entire. Apex Shape: Cuspidate. Base Shape: Rounded.

Form.—Flat with tips slightly recurved.

Arrangement.—Imbricated.

Petaloids.—Number: 3 to 5, 7 to 20 mm long×3 to 8 mm wide. Color: upper: Purple Group N78B in the centre of the flower and Purple Group N78C on the edges of the flower. lower: Purple Group 76B.

Persistence.—Petals drop off cleanly before drying.

Lastingness.—On the plant: Long (about 5 to 7 days). As a cut flower: Long (about 7 to 9 days).

Reproductive parts:

Stamens.—Number: 100 to 120. Length: 8 to 12 mm. Anthers: Length: 1 mm. Color: Greyed-Orange Group 168D. Arrangement: Regular around styles. Filaments: Color: Greyed-Yellow Group 161D. Length: 7 to 11 mm. Pollen: Color: Greyed-Orange Group 171 C.

Pistils.—Number: 60 to 80. Length: 5 to 7 mm. Styles: Color: Red Group 46D. Length: 4 to 6 mm. Stigmas: Color: Greyed-Orange Group 165C. Length: 1 mm.

Hips.—Color: Yellow-Green Group 147B. Shape: Round. Size: 18 to 20 mm diameter.

PLANT

Form.—Bush.

Growth.—Vigorous; branching.

Age to maturity.—2 years.

Mature plant.—Height: About 80 to 100 cm. Width: About 80 to 90 cm.

Rootstock.—Own root.

Foliage: Number of leaflets on normal mid-stem leaves: 5 to 7.

Size.—Medium, about 8 to 12 cm long×6 to 8 cm wide.

Quantity.—Normal.

Color.—New foliage: Upper side: Greyed-Red Group 178A Lower side: Greyed-Red Group 178A. Old foliage: Upper side: Green Group 139A. Lower side: Green Group 139C.

Leaflets:

Size.—About 3.5 to 4 cm long×2.5 to 3 cm wide.

Shape.—Broadly oval.

Base shape.—Rounded.

Apex shape.—Acuminate.

Texture.—Leathery.

Edge.—Serrated.

Serrations.—Single.

Petiole.—Color: Yellow-Green Group 147B.

Petiole rachis.—Color: Yellow-Green Group 147B. Underside: Prickles.

Stipules.—Length: 15 mm.

Disease resistance.—Susceptible to blackspot; mildew and rust resistant under normal growing conditions.

Pest resistance.—Not observed.

Vein color.—Yellow-Green Group 147B.

Venation pattern.—Reticulate.

Wood:

New wood.—Color: Yellow-Green Group 148A and Greyed-Red Group 180A. Bark: Smooth.

Old wood.—Color: Yellow-Green Group 146B. Bark: Smooth.

Prickles:

Quantity.—On main canes from base: None. On laterals from main canes: Few (6 to 8 per 20 cm).

Form.—Straight.

Length.—8 to 10 mm.

Color when young.—Greyed-Red Group 178C.

Color when mature.—Greyed-Orange Group 164C.

Small prickles:

Quantity.—On main stalks: None. On laterals: None.

Winter hardiness: Hardy to Zone 5.

I claim:

1. A new and distinct variety of floribunda rose plant, substantially as herein shown and described, characterized particularly by its compact rounded growth habit; large clusters of lavender flowers having a strong citrus fragrance; glossy dark green foliage; and resistance to rust and powdery mildew.

JACperby
