The claimed design covers two sizes of similar polyethylene tank assemblies featuring a cylindrical tank mounted on top of a second tank shaped as a flat rectangular prism, a sight glass mounted on one end of the cylindrical tank, a solar panel mounting pole on the top of the cylindrical tank, and other built-in equipment mounts as shown on the drawings. The two sizes of tank assemblies are patentably indistinct, differing only in the capacity of the top tank, and are therefore obvious variations of each other.
