(54) Title: CLEANING DEVICE FOR A COVER SYSTEM OF A SWIMMING POOL

Fig.3

(57) Abstract: A cleaning device (1) for a cover system of a swimming pool comprises a cleaning (head 2) with an inlet (3) for a cleaning agent and an outlet (5) to allow the cleaning agent to flow out and act on the cover system. The cleaning head (2) herein comprises guide means (9) which are able and adapted to co-act with an edge of a recess of the cover system for cleaning in order to allow tracking of the cleaning head (2) therein with a spray side at least close to a surface for cleaning. The outlet (5) of the cleaning head (2) herein opens on the spray side. A cleaning device (1) is thus provided which is able and adapted to allow a cleaning agent to act relatively directly on fouling on a surface for cleaning, such as for instance in a recess of a cover system of a swimming pool, whereby even obstinate fouling, such as for instance algal growth, can be removed therefrom.
