# UNITED STATES PATENT OFFICE.

CHARLES REMHOF, OF BROOKLYN, NEW YORK.

## IMPROVEMENT IN COMBINED TOBACCO-BOXES AND MATCH-BOXES.

Specification forming part of Letters Patent No. **135,488**, dated February 4, 1873.

*To all whom it may concern:*

Be it known that I, CHAS. REMHOF, of Brooklyn, in the county of Kings and State of New York, have invented a new and Improved Combined Tobacco-Box and Match-Box; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the accompanying drawing forming a part of this specification.

The invention consists of a new article of manufacture for the reception of tobacco and matches, constructed as hereinafter described.

Figure 1 is a plan view of tobacco-box and match-box. Fig. 2 is a transverse sectional elevation through the closed tobacco-box and match-box.

A is the sheet-metal box, from which I divide off a space, B, along the side, to which the cover C is hinged by an angle-plate, D, inclosing two sides of said space, which, on the other two sides, will be inclosed by the bottom and rear side of the box. Then I cut a hole through

the side of the box, at one end of this space B, as large as the transverse area of it, and introduce a sliding match-box, E, which I prevent from coming out again by a spring, F, attached to the box E suitably for coming against the cup G, so as to arrest the box when it is pulled out far enough. This spring will also bear upon the bottom I of the tobacco-box to prevent, by friction, the box E from sliding open in the pocket.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

As a new article of manufacture, the sheet-metal box, partitioned for the reception of the drawer, said drawer having a retaining-check, and the hinged sides of the box being braced by said partition, substantially as described.

CHARLES REMHOF.
