An electronic locking system is provided wherein an electronic lock’s restriction of movement of a locked securing member (420), such as a door latch or bolt, can be selectively overridden from inside a locked enclosure by manual manipulation of a handle (426). The handle (426) moves the securing member (420) to open a locked barrier even though the electronic lock remains in a locked condition.
INTERNATIONAL SEARCH REPORT

A. CLASSIFICATION OF SUBJECT MATTER
IPC(7) : E05B 47/06
US CL : 70/223, 278.3, 278.7, 379R
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
U.S. : 70/188, 189, 223, 278.3, 278.7, 283, 379R, 422

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT
