The invention relates to a method for controlling pests using a combination of insecticides and transgenic plants and consequently improving the utilization of the production potential of transgenic plants which comprises treating the plant with active compound combinations comprising an active compound from the group of the anthranilamides and at least one further insecticide.

**CONTROLLING PESTS BY COMBINING
INSECTICIDES AND TRANSGENIC PLANTS
BY APPLYING DIRECTLY TO LEAVES AND
ROOTS**

[0001] The invention relates to a method for controlling pests using a combination of insecticides and transgenic plants and consequently improving the utilization of the production potential of transgenic plants.

[0002] In recent years, there has been a marked increase in the proportion of transgenic plants in agriculture, even if regional differences are still noticeable to date. Thus, for example, the proportion of transgenic maize in the USA has doubled from 26% to 52% since 2001, while transgenic maize has hardly been of any practical importance in Germany. However, in other European countries, for example in Spain, the proportion of transgenic maize is already about 12%.

[0003] Transgenic plants are employed mainly to utilize the production potential of respective plant varieties in the most favourable manner, at the lowest possible input of production means. The aim of the genetic modification of the plants is in particular the generation of resistance in the plants to certain pests or harmful organisms or else herbicides and also to abiotic stress (for example drought, heat or elevated salt levels). It is also possible to modify a plant genetically to increase certain quality or product features, such as, for example, the content of selected vitamins or oils, or to improve certain fibre properties.

[0004] Herbicide resistance or tolerance can be achieved, for example, by incorporating genes into the useful plant for expressing enzymes to detoxify certain herbicides, so that a relatively unimpeded growth of these plants is possible even in the presence of these herbicides for controlling broad-leaved weeds and weed grasses. Examples which may be mentioned are cotton varieties or maize varieties which tolerate the herbicidally active compound glyphosate (Roundup®), (Roundup Ready®, Monsanto) or the herbicides glufosinate or oxylin.

[0005] More recently, there has also been the development of useful plants comprising two or more genetic modifications ("stacked transgenic plants" or multiply transgenic crops). Thus, for example, Monsanto has developed multiply transgenic maize varieties which are resistant to the European corn borer (*Ostrinia nubilalis*) and the Western corn rootworm (*Diabrotica virgifera*). Also known are maize and cotton crops which are both resistant to the Western corn rootworm and the cotton bollworm and tolerant to the herbicide Roundup®.

[0006] It has now been found that the utilization of the production potential of transgenic useful plants can be improved even more by treating the plants with a mixture of an active compound of the formula (I) and an active compound of group II. Here, the term "treatment" includes all measures resulting in a contact between these active compounds and at least one plant part. "Plant parts" are to be understood as meaning all above-ground and below-ground parts and organs of plants, such as shoot, leaf, flower and root, by way of example leaves, needles, stalks, stems, flowers, fruit bodies, fruits and seed, and also roots, tubers and rhizomes. The plant parts also include harvested material and also vegetative and generative propagation material, for example cuttings, tubers, rhizomes, slips and seed.

[0007] It is already known that compounds of the formula (I) have insecticidal action (for example from WO 03/015519 and WO 04/067528), and that they can be used in mixtures (for example from WO 05/048711, WO 05/107468, WO 06/007595, WO 06/068669). These documents are expressly incorporated herein by way of reference.

[0008] The mixtures which can be used according to the invention comprise an active compound of the formula (I) as follows:

where

R1 represents Cl or cyano

and at least one of the following active compounds from group (II). The active compounds of group (II) are classified in various classes (1-21) and groups according to their mechanism of action:

Insecticides/Acaricides/Nematicides:

[0009] (1) Acetylcholinesterase (AChE) inhibitors, for example

carbamates, e.g. alanycarb, aldicarb, aldoxycarb, allyxcarb, aminocarb, bendiocarb, benfuracarb, bufencarb, butacarb, butocarboxim, butoxycarboxim, carbaryl, carbofuran, carbosulfan, cloethocarb, dimetilan, ethiofencarb, fenobucarb, fenothiocarb, formetanate, furathiocarb, isoprocarb, metamsodium, methiocarb, methomyl, metolcarb, oxamyl, pirimicarb, promecarb, propoxur, thiodicarb, thiofanox, trimethacarb, XMC, and xylylcarb; or

organophosphates, e.g. acephate, azamethiphos, azinphos (-methyl, -ethyl), bromophos-ethyl, bromfenvinfos (-methyl), butathiofos, cadusafos, carbophenothion, chlorethoxyfos, chlorfenvinphos, chlormephos, chlorpyrifos (-methyl/-ethyl), coumaphos, cyanofenphos, cyanophos, chlorfenvinphos, demeton-S-methyl, demeton-S-methylsulfon, dialifos, diazinon, dichlofenthion, dichlorvos/DDVP, dicrotophos, dimethoate, dimethylvinphos, dioxabenzofos, disulfoton, EPN, ethion, ethoprophos, etrimfos, famphur, fenamiphos, fenitrothion, fensulfothion, fenthion, flupyrazofos, fonofos, formothion, fosmethilan, fosthiazate, heptenophos, iodofenphos, iprobenfos, isazofos, isofenphos, isopropyl, O-salicylate, isoxathion, malathion, mecarbam, methacrifos, methamidophos, methidathion, mevinphos, monocrotophos, naled, omethoate, oxydemeton-methyl, parathion (-methyl/-ethyl), phenthoate, phorate, phosalone, phosmet, phosphamidon, phosphocarb, phoxim, pirimiphos (-methyl/-ethyl), profenofos, propaphos, propetamphos, prothiofos, prothoate, pyraclofos, pyridaphenthion, pyridathion, quinalphos, sebufos, sulfotep, sulprofos, tebupirimfos, teme-

phos, terbufos, tetra-chlorvinphos, thiometon, triazophos, trichlorfon, vamidothion, and imicyafos.

(2) GABA-gated chloride channel antagonists, for example organochlorines, e.g. camphechlor, chlordane, endosulfan, gamma-HCH, HCH, heptachlor, lindane, and methoxychlor; or

fiproles (phenylpyrazoles), e.g. acetoprole, ethiprole, fipronil, pyrafluprole, pyriprole, and vaniliprole.

(3) Sodium channel modulators/voltage-dependent sodium channel blockers, for example

pyrethroids, e.g. acrinathrin, allethrin (d-cis-trans, d-trans), beta-cyfluthrin, bifenthrin, bioallethrin, bioallethrin S-cyclopentyl isomer, bioethanomethrin, biopermethrin, bioresmethrin, chlovaporthrin, cis-cypermethrin, cis-resmethrin, cis-permethrin, clopythrin, cycloprothrin, cyfluthrin, cyhalothrin, cypermethrin (alpha-, beta-, theta-, zeta-), cyphenothrin, deltamethrin, empenethrin (1R isomer), esfenvalerate, etofenprox, fenfluthrin, fenpropathrin, fenpyrithrin, fenvalerate, flubrocycrin, flucythrinate, flufenprox, flumethrin, fluvalinate, fubfenprox, gamma-cyhalothrin, imiprothrin, kadethrin, lambda-cyhalothrin, metofluthrin, permethrin (cis-, trans-), phenothrin (1R trans isomer), prallethrin, profluthrin, protrifenbutate, pyresmethrin, resmethrin, RU 15525, silafluofen, tau-fluvalinate, tefluthrin, terallethrin, tetramethrin (-1R-isomer), tralomethrin, transfluthrin, ZXI 8901, pyrethrin (pyrethrum), eflusilanat; DDT; or methoxychlor.

(4) Nicotinic acetylcholine receptor agonists/antagonists, for example chloronicotinylns, e.g. acetamiprid, clothianidin, dinotefuran, imidacloprid, imidacloprid, nitenpyram, nithiazine, thiacloprid, thiamethoxam, AKD-1022, nicotine, bensultap, cartap, thiosultap-sodium, and thiocyclam.

(5) Allosteric acetylcholine receptor modulators (agonists), for example spinosyns, e.g. spinosad and spinetoram.

(6) Chloride channel activators, for example mectins/macrolides, e.g. abamectin, emamectin, emamectin benzoate, ivermectin, lepermectin, and milbemectin; or juvenile hormone analogues, e.g. hydroprene, kinoprene, methoprene, epofenonane, triprene, fenoxycarb, pyriproxifen, and diufenolan.

(7) Active compounds with unknown or non-specific mechanisms of action, for example gassing agents, e.g. methyl bromide, chloropicrin and sulfur fluoride;

selective antifeedants, e.g. cryolite, pymetrozine, pyrifluquinazon and flonicamid; or mite growth inhibitors, e.g. clofentezine, hexythiazox, etoxazole.

(8) Oxidative phosphorylation inhibitors, ATP disruptors, for example diafenthiuron; organotin compounds, e.g. azocyclotin, cyhexatin and fenbutatin oxide; or propargite, tetradiifon.

(9) Oxidative phosphorylation decouplers acting by interrupting the H proton gradient, for example chlorfenapyr, binapacryl, dinobuton, dinocap and DNOC.

(10) Microbial disruptors of the insect gut membrane, for example *Bacillus thuringiensis* strains.

(11) Chitin biosynthesis inhibitors, for example benzoylureas, e.g. bistrifluoron, chlorfluazuron, diflubenzuron, flua-

zuron, flucycloxuron, flufenoxuron, hexaflumuron, lufenuron, novaluron, novi-flumuron, penfluron, teflubenzuron or triflumuron.

(12) Buprofezin.

[0010] (13) Moulting disruptors, for example cyromazine.

(14) Ecdysone agonists/disruptors, for example diacylhydrazines, e.g. chromafenozide, halofenozide, methoxyfenozide, tebufenozide, and flufenozide; or azadirachtin.

(15) Octopaminergic agonists, for example amitraz.

(16) Site III electron transport inhibitors/site II electron transport inhibitors, for example hydramethylnon; acequinocyl; fluacrypyrim; or cyflumetofen and cyenopyrafen.

(17) Electron transport inhibitors, for example site I electron transport inhibitors, from the group of the METI acaricides, e.g. fenazaquin, fenpyroximate, pyrimidifen, pyridaben, tebufenpyrad, tolfenpyrad, and rotenone; or voltage-dependent sodium channel blockers, e.g. indoxacarb and metaflumizone.

(18) Fatty acid biosynthesis inhibitors, for example tetroneic acid derivatives, e.g. spirodiclofen and spiromesifen; or tetramic acid derivatives, e.g. spirotetramat.

(19) Neuronal inhibitors with unknown mechanism of action, e.g. bifenazate.

(20) Ryanodine receptor effectors, for example diamides, e.g. flubendiamide or (R),(S)-3-chloro-N¹-{2-methyl-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]phenyl}-N²-(1-methyl-2-methylsulphonyl)ethyl)phthalamide.

(21) Further active compounds with unknown mechanism of action, for example amidoformet, benclorothiaz, benzoximate, bromopropylate, buprofezin, chinomethionat, chlordimeform, chlorobenzilate, clothiazoben, cycloprene, dicofol, dicyclanil, fenoxacrim, fentrifanil, flubenzimine, flufenimer, flutenzin, gossypure, japonilure, metoxadiazon, petroleum, potassium oleate, pyridalyl, sulfluramid, tetrasul, triarathene or verbutin; or the following known active compounds:

[0011] 4-[[[(6-bromopyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(6-fluoropyrid-3-yl)methyl](2,2-difluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(2-chloro-1,3-thiazol-5-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(6-chloropyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(6-chloropyrid-3-yl)methyl](2,2-difluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(6-chloro-5-fluoropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one (known from WO 2007/115643), 4-[[[(5,6-dichloropyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115646), 4-[[[(6-chloro-5-fluoropyrid-3-yl)methyl](cyclopropyl)amino]furan-2(5H)-one (known from WO 2007/115643), 4-[[[(6-chloropyrid-3-yl)methyl](cyclopropyl)amino]furan-2(5H)-one (known from EP-A-0 539 588), 4-[[[(6-chloropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one (known from EP-A-0 539 588), [(6-chloropyridin-3-yl)methyl](methyl)oxido-λ⁴-sulfanylidene cyanamide (known from WO 2007/149134), [1-(6-chloropyridin-3-yl)ethyl](methyl)oxido-λ⁴-sulfanylidene cyanamide (known from WO 2007/149134) and its diastereomers (A) and (B)

(likewise known from WO 2007/149134), [(6-trifluoromethylpyridin-3-yl)methyl](methyl)oxido- λ^4 -sulfanylidene cyanamide (known from WO 2007/095229), or [1-(6-trifluoromethylpyridin-3-yl)ethyl](methyl)oxido- λ^4 -sulfanylidene cyanamide (known from WO 2007/149134) and its diastereomers (C) and (D)

(likewise known from WO 2007/149134).

[0012] The active compounds mentioned in this description by their common name are known for example from "The Pesticide Manual" 13th Ed., British Crop Protection Council 2003, and the website <http://www.alanwood.net/pesticides>.

[0013] Preference is given to mixtures comprising the active compound of the formula (I-1)

and at least one active compound of group II.

[0014] Preference is likewise given to mixtures comprising the active compound of the formula (I-2)

and at least one active compound of group II.

[0015] Particular preference is given to the mixtures below comprising the active compound of the formula I-1 and at least one active compound of group (II) selected from acetylcholinesterase (AChE) inhibitors, for example methiocarb and thiodicarb;

nicotinergeric acetylcholine receptor agonists/antagonists, for example imidacloprid, thiacloprid, clothianidin, acetamiprid and thiamethoxam;

GABA-gated chloride channel antagonists, for example ethiprole and fipronil;

sodium channel modulators, for example deltamethrin, beta-cyfluthrin, lambda-cyhalothrin and tefluthrin;

allosteric acetylcholine receptor modulators (agonists), for example spinosad and spinetoram;

chloride channel activators, for example abamectin and emamectin benzoate;

inhibitors of fatty acid biosynthesis, for example spirotetramate, spiromesifen and spirotetramate;

further active compounds, for example

[0016] 4-{[(6-chloropyrid-3-yl)methyl](2-fluoroethyl)amino}furan-2(5H)-one,

[0017] 4-{[(6-chloropyrid-3-yl)methyl](2,2-difluoroethyl)amino}furan-2(5H)-one,

[0018] 4-{[(6-chloro-5-fluoropyrid-3-yl)methyl](methyl)amino}furan-2(5H)-one, and 4-{[(6-chloropyrid-3-yl)methyl](methyl)amino}furan-2(5H)-one.

[0019] Particular preference is similarly given to the mixtures below comprising

the active compound of the formula I-2 and at least one active compound of group (II) selected from acetylcholinesterase (AChE) inhibitors, for example methiocarb and thiodicarb;

nicotinergeric acetylcholine receptor agonists/antagonists, for example imidacloprid, thiacloprid, clothianidin, acetamiprid and thiamethoxam;

GABA-gated chloride channel antagonists, for example ethiprole and fipronil;

sodium channel modulators, for example deltamethrin, beta-cyfluthrin, lambda-cyhalothrin and tefluthrin;

allosteric acetylcholine receptor modulators (agonists), for example spinosad and spinetoram;

chloride channel activators, for example abamectin and emamectin benzoate;

inhibitors of fatty acid biosynthesis, for example spirotetramate, spiromesifen and spirotetramate;

further active compounds, for example

- [0020] 4-[[[(6-chloropyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one,
 [0021] 4-[[[(6-chloropyrid-3-yl)methyl](2,2-difluoroethyl)amino]furan-2(5H)-one,
 [0022] 4-[[[(6-chloro-5-fluoropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one, and 4-[[[(6-chloropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one.

[0023] Very particular preference is given to mixtures comprising the active compound of the formula (I-1) or the formula (I-2) and at least one of the following active compounds of group II, selected from spirodiclofen, spiromesifen, spirotetramate, deltamethrin, lambda-cyhalothrin, ethiprole, emamectin benzoate, acetamiprid, spinetoram,

[0024] 4-[[[(6-chloropyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one,

[0025] 4-[[[(6-chloropyrid-3-yl)methyl](2,2-difluoroethyl)amino]furan-2(5H)-one, and

[0026] 4-[[[(6-chloro-5-fluoropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one, and 4-[[[(6-chloropyrid-3-yl)methyl](methyl)amino]furan-2(5H)-one

[0027] Very particular preference is similarly given to mixtures comprising the active compound of the formula (I-1) or of the formula (I-2) and at least one of the following active compounds of group II selected from imidacloprid, thiodicarb, clothianidin, methiocarb, thiacloprid, thiamethoxam, fipronil, tefluthrin, beta-cyfluthrin, abamectin or spinosad.

[0028] Particular preference is given to the mixtures below comprising

the active compound of the formula I-1 and imidacloprid;

the active compound of the formula I-1 and clothianidin;

the active compound of the formula I-2 and imidacloprid;

the active compound of the formula I-2 and clothianidin.

[0029] In addition, the active compound combinations may also comprise further fungicidally, acaricidally or insecticidally active co-components.

[0030] In general, the mixtures according to the invention comprise an active compound of the formula (I) and an active compound of group (II) in the stated preferred and particularly preferred mixing ratios:

[0031] The preferred mixing ratio is from 250:1 to 1:50.

[0032] The particularly preferred mixing ratio is from 125:1 to 1:50.

[0033] The most particularly preferred mixing ratio is from 25:1 to 1:25.

[0034] The especially preferred mixing ratio is from 5:1 to 5:1

[0035] The mixing ratios are based on weight ratios. The ratio is to be understood as active compound of the formula (I):co-component of group (II) to active compound of the formula (I):co-component of group (II).

[0036] According to the method proposed according to the invention, transgenic plants, in particular useful plants, are treated with the mixtures according to the invention to increase agricultural productivity. For the purpose of the invention, transgenic plants are plants which contain at least one "foreign gene". The term "foreign gene" in this connection means a gene or gene fragment which may originate or be derived from another plant of the same species, from plants of a different species, but also from organisms from the animal kingdom or microorganisms (including viruses) ("foreign gene") and/or, if appropriate, already has mutations compared to a naturally occurring gene or gene fragment. According to the invention, it is also possible to use synthetic genes or gene fragments, which is also included in the term "foreign gene" here. It is also possible for a transgenic plant to code for two or more foreign genes of different origin.

[0037] For the purpose of the invention, the "foreign gene" is further characterized in that it comprises a nucleic acid sequence which has a certain biological or chemical function or activity in the transgenic plant. In general, these genes code for biocatalysts, such as, for example, enzymes or ribozymes, or else they comprise regulatory sequences, such as, for

example, promoters or terminators, for controlling the expression of endogenous proteins. However, to this end, they may also code for regulatory proteins, such as, for example, repressors or inducers. Furthermore, the foreign gene may also serve the targeted localization of a gene product of the transgenic plant, coding, for example, for a signal peptide. The foreign gene may also code for inhibitors, such as, for example, antisense RNA.

[0038] The person skilled in the art is readily familiar with numerous different methods for producing transgenic plants and methods for the targeted mutagenesis, for gene transformation and cloning, for example from: Willmitzer, 1993, *Transgenic plants*, in: *Biotechnology, A Multivolume Comprehensive Treatise*, Rehm et al. (eds.), Vol. 2, 627-659, VCH Weinheim, Germany; McCormick et al., 1986, *Plant Cell Reports* 5: 81-84; EP-A 0221044; EP-A 0131624, or Sambrook et al., 1989, "Molecular Cloning: A Laboratory Manual", 3rd Ed., Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y.; Winnacker, 1996, "Gene and Clone" [Genes and Clones], 2nd Ed., VCH Weinheim or Christou, 1996, *Trends in Plant Science* 1: 423-431. Examples of transit or signal peptides or time- or site-specific promoters are disclosed, for example, in Braun et al., 1992, *EMBO J.* 11: 3219-3227; Wolter et al., 1988, *Proc. Natl. Acad. Sci. USA* 85: 846-850; Sonnewald et al., 1991, *Plant J.* 1:95-106.

[0039] A good example of a complex genetic manipulation of a useful plant is the so-called GURT technology ("Genetic Use Restriction Technologies") which allows the technical control of the propagation of the transgenic plant variety in question. To this end, in general two or three foreign genes are cloned into the useful plant which, in a complex interaction after administration of an external stimulus, trigger a cascade resulting in the death of the embryo which would otherwise develop. To this end, the external stimulus (for example an active compound or another chemical or abiotic stimulus) may interact, for example, with a repressor which then no longer suppresses the expression of a recombinase, so that the recombinase is able to cleave an inhibitor thus allowing expression of a toxin causing the embryo to die. Examples of this type of transgenic plants are disclosed in U.S. Pat. No. 5,723,765 or U.S. Pat. No. 5,808,034.

[0040] Accordingly, the person skilled in the art is familiar with processes for generating transgenic plants which, by virtue of the integration of regulatory foreign genes and the overexpression, suppression or inhibition of endogenous genes or gene sequences mediated in this manner, if appropriate, or by virtue of the existence or expression of foreign genes or fragments thereof, have modified properties.

[0041] As already discussed above, the method according to the invention allows better utilization of the production potential of transgenic plants. On the one hand, this may, if appropriate, be based on the fact that the application rate of the active compound which can be employed according to the invention can be reduced, for example by lowering the dose employed or else by reducing the number of applications. On the other hand, if appropriate, the yield of the useful plants may be increased quantitatively and/or qualitatively. This is true in particular in the case of a transgenically generated resistance to biotic or abiotic stress.

[0042] Depending on the plant species or plant varieties, their location and the growth conditions (soils, climate, vegetation period, nutrients), these synergistic actions may vary and may be multifarious. Thus possible are, for example,

reduced application rates and/or a widening of the activity spectrum and/or an increase of the activity of the compounds and compositions used according to the invention, better plant growth, increased tolerance to high or low temperatures, increased tolerance to drought or to water or soil salt content, increased flowering, easier harvesting, accelerated maturation, higher harvest yields, higher quality and/or higher nutrient value of the harvested products, increased storability and/or processibility of the harvested products, which exceed the effects normally to be expected.

[0043] These advantages are the result of a synergistic action, achieved according to the invention, between the mixtures according to the invention which can be employed and the respective principle of action of the genetic modification of the transgenic plant. This reduction of production means as a result of the synergism, with simultaneous yield or quality increase, is associated with considerable economical and ecological advantages.

[0044] A list of examples known to the person skilled in the art of transgenic plants, with the respective affected structure in the plant or the protein expressed by the genetic modification in the plant being mentioned, is compiled in Table 1. Here, the structure in question or the principle expressed is in each case grouped with a certain feature in the sense of a tolerance to a certain stress factor. A similar list (Table 3) compiles—in a slightly different arrangement—likewise examples of principles of action, tolerances induced thereby and possible useful plants. Further examples of transgenic plants suitable for the treatment according to the invention are compiled in Table 4.

[0045] In an advantageous embodiment, the mixtures according to the invention are used for treating transgenic plants comprising at least one foreign gene coding for a Bt toxin. A Bt toxin is a protein originating from or derived from the soil bacterium *Bacillus thuringiensis* which either belongs to the group of the crystal toxins (Cry) or the cytolytic toxins (Cyt). In the bacterium, they are originally formed as protoxins and are only metabolized in alkaline medium—for example in the digestive tract of certain feed insects—to their active form. There, the active toxin then binds to certain hydrocarbon structures at cell surfaces causing pores to be formed which destroy the osmotic potential of the cell, which may effect cell lysis. The result is the death of the insects. Bt toxins are active in particular against certain harmful species from the orders of the Lepidoptera (butterflies), Homoptera, Diptera and Coleoptera (beetles) in all their development stages; i.e. from the egg larva via their juvenile forms to their adult forms.

[0046] It has been known for a long time that gene sequences coding for Bt toxins, parts thereof or else peptides or proteins derived from Bt toxins can be cloned with the aid of genetic engineering into agriculturally useful plants to generate transgenic plants having endogenous resistance to pests sensitive to Bt toxins. For the purpose of the invention, the transgenic plants coding for at least one Bt toxin or proteins derived therefrom are defined as “Bt plants”.

[0047] The “first generation” of such Bt plants generally only comprise the genes enabling the formation of a certain toxin, thus only providing resistance to one group of pathogens. An example of a commercially available maize variety comprising the gene for forming the Cry1Ab toxin is “YieldGard®” from Monsanto which is resistant to the European corn borer. In contrast, in the Bt cotton variety (Bollgard®), resistance to other pathogens from the family of the Lepi-

doptera is generated by introduction by cloning of the genes for forming the Cry1Ac toxin. Other transgenic crop plants, in turn, express genes for forming Bt toxins with activity against pathogens from the order of the Coleoptera. Examples that may be mentioned are the Bt potato variety “NewLeaf®” (Monsanto) capable of forming the Cry3A toxin, which is thus resistant to the Colorado potato beetle, and the transgenic maize variety “YieldGard®” (Monsanto) which is capable of forming the Cry 3Bb1 toxin and is thus protected against various species of the Western corn rootworm.

[0048] In a “second generation”, the multiply transgenic plants, already described above, expressing or comprising at least two foreign genes were generated.

[0049] Preference according to the invention is given to transgenic plants with Bt toxins from the group of the Cry family (see, for example, Crickmore et al., 1998, Microbiol. Mol. Biol. Rev. 62: 807-812), which are particularly effective against Lepidoptera, Coleoptera and Diptera. Examples of genes coding for the proteins are (Table A-1 to A-197):

(A-1) cry1Aa1; (A-2) cry1Aa2; (A-3) cry1Aa3; (A-4) cry1Aa4; (A-5) cry1Aa5; (A-6) cry1Aa6; (A-7) cry1Aa7; (A-8) cry1Aa8; (A-9) cry1Aa9; (A-10) cry1Aa10; (A-11) cry1Aa11; (A-12) cry1Ab1; (A-13) cry1Ab2; (A-14) cry1Ab3; (A-15) cry1Ab4; (A-16) cry1Ab5; (A-17) cry1Ab6; (A-18) cry1Ab7; (A-19) cry1Ab8; (A-20) cry1Ab9; (A-21) cry1Ab10; (A-22) cry1Ab11; (A-23) cry1Ab12; (A-24) cry1Ab13; (A-25) cry1Ab14; (A-26) cry1Ac1; (A-27) cry1Ac2; (A-28) cry1Ac3; (A-29) cry1Ac4; (A-30) cry1Ac5; (A-31) cry1Ac6; (A-32) cry1Ac7; (A-33) cry1Ac8; (A-34) cry1Ac9; (A-35) cry1Ac10; (A-36) cry1Ac11; (A-37) cry1Ac12; (A-38) cry1Ac13; (A-39) cry1Ad1; (A-40) cry1Ad2; (A-41) cry1Ae1; (A-42) cry1Af1; (A-43) cry1Ag1; (A-44) cry1Ba1; (A-45) cry1Ba2; (A-46) cry1Bb1; (A-47) cry1Bc1; (A-48) cry1Bd1; (A-49) cry1Be1; (A-50) cry1Ca1; (A-51) cry1Ca2; (A-52) cry1Ca3; (A-53) cry1Ca4; (A-54) cry1Ca5; (A-55) cry1Ca6; (A-56) cry1Ca7; (A-57) cry1Cb1; (A-58) cry1Cb2; (A-59) cry1Da1; (A-60) cry1Da2; (A-61) cry1Db1; (A-62) cry1Ea1; (A-63) cry1Ea2; (A-64) cry1Ea3; (A-65) cry1Ea4; (A-66) cry1Ea5; (A-67) cry1Ea6; (A-68) cry1Eb1; (A-69) cry1Fa1; (A-70) cry1Fa2; (A-71) cry1Fb1; (A-72) cry1Fb2; (A-73) cry1Fb3; (A-74) cry1Fb4; (A-75) cry1Ga1; (A-76) cry1Ga2; (A-77) cry1Gb1; (A-78) cry1Gb2; (A-79) cry1Ha1; (A-80) cry1Hb1; (A-81) cry1Ia1; (A-82) cry1Ia2; (A-83) cry1Ia3; (A-84) cry1Ia4; (A-85) cry1Ia5; (A-86) cry1Ia6; (A-87) cry1Ib1; (A-88) cry1Ic1; (A-89) cry1Id1; (A-90) cry1Ie1; (A-91) cry1I-like; (A-92) cry1Ia1; (A-93) cry1Jb1; (A-94) cry1Jc1; (A-95) cry1Ka1; (A-96) cry1-like; (A-97) cry2Aa1; (A-98) cry2Aa2; (A-99) cry2Aa3; (A-100) cry2Aa4; (A-101) cry2Aa5; (A-102) cry2Aa6; (A-103) cry2Aa7; (A-104) cry2Aa8; (A-105) cry2Aa9; (A-106) cry2Ab1; (A-107) cry2Ab2; (A-108) cry2Ab3; (A-109) cry2Ac1; (A-110) cry2Ac2; (A-111) cry2Ad1; (A-112) cry3Aa1; (A-113) cry3Aa2; (A-114) cry3Aa3; (A-115) cry3Aa4; (A-116) cry3Aa5; (A-117) cry3Aa6; (A-118) cry3Aa7; (A-119) cry3Ba1; (A-120) cry3Ba2; (A-121) cry3Bb1; (A-122) cry3Bb2; (A-123) cry3Bb3; (A-124) cry3Ca-1; (A-125) cry4Aa1; (A-126) cry4Aa2; (A-127) cry4Ba1; (A-128) cry4Ba2; (A-129) cry4Ba3; (A-130) cry4Ba4; (A-131) cry5Aa1; (A-132) cry5Ab1; (A-133) cry5Ac1; (A-134) cry5Ba1; (A-135) cry6Aa1; (A-136) cry6Ba1; (A-137) cry7Aa1; (A-138) cry7Ab1; (A-139) cry7Ab2; (A-140) cry8Aa1; (A-141) cry8Ba1; (A-142) cry8Ca1; (A-143) cry9Aa1; (A-144) cry9Aa2; (A-145) cry9Ba1; (A-146)

cry9Ca-1; (A-147) cry9Da1; (A-148) cry9Da2; (A-149) cry9Ea1; (A-150) cry9 like; (A-151) cry10Aa1; (A-152) cry10Aa2; (A-153) cry11Aa1; (A-154) cry11Aa2; (A-155) cry11Ba1; (A-156) cry11Bb1; (A-157) cry12Aa1; (A-158) cry13Aa1; (A-159) cry14Aa1; (A-160) cry15Aa1; (A-161) cry16Aa1; (A-162) cry17Aa1; (A-163) cry18Aa1; (A-164) cry18Ba1; (A-165) cry18Ca-1; (A-166) cry19Aa1; (A-167) cry19Ba1; (A-168) cry20Aa1; (A-169) cry21Aa1; (A-170) cry21Aa2; (A-171) cry22Aa1; (A-172) cry23Aa1; (A-173) cry24Aa1; (A-174) cry25Aa1; (A-175) cry26Aa1; (A-176) cry27Aa1; (A-177) cry28Aa1; (A-178) cry28Aa2; (A-179) cry29Aa1; (A-180) cry30Aa1; (A-181) cry31Aa1; (A-182) cyt1Aa1; (A-183) cyt1Aa2; (A-184) cyt1Aa3; (A-185) cyt1Aa4; (A-186) cyt1Ab1; (A-187) cyt1Ba1; (A-188) cyt2Aa1; (A-189) cyt2Ba1; (A-190) cyt2Ba2; (A-191) cyt2Ba3; (A-192) cyt2Ba4; (A-193) cyt2Ba5; (A-194) cyt2Ba6; (A-195) cyt2Ba7; (A-196) cyt2Ba8; (A-197) cyt2Bb1.

[0050] Particular preference is given to the genes or gene sections of the subfamilies cry1, cry2, cry3, cry5 and cry9; especially preferred are cry1Ab, cry1Ac, cry3A, cry3B and cry9C.

[0051] Furthermore, it is preferred to use plants which, in addition to the genes for one or more Bt toxins, express or contain, if appropriate, also genes for expressing, for example, a protease or peptidase inhibitor (such as in WO-A 95/35031), of herbicide resistances (for example to glufosinate or glyphosate by expression of the pat gene or bar gene) or for becoming resistant to nematodes, fungi or viruses (for example by expressing a gluconase, chitinase). However, they may also be modified in their metabolic properties, so that they show a qualitative and/or quantitative change of ingredients (for example by modification of the energy, carbohydrate, fatty acid or nitrogen metabolism or by metabolite currents influencing these (see above).

[0052] A list of examples of principles of action which can be introduced by genetic modification into a useful plant and which are suitable for the treatment according to the invention on their own or in combination is compiled in Table 2. Under the header "AP" (active principle), this table contains the respective principle of action and associated therewith the pest to be controlled.

[0053] In a particularly preferred variant, the process according to the invention is used for treating transgenic vegetable, maize, soya bean, cotton, tobacco, rice, potato, sunflower, rape and sugar beet varieties. These are preferably Bt plants.

[0054] The vegetable plants or varieties are, for example, the following useful plants:

[0055] potatoes: preferably starch potatoes, sweet potatoes and table potatoes;

[0056] root vegetables: preferably carrots, turnips (swedes, stubble turnips (*Brassica rapa* var. *rapa*), spring turnips, autumn turnips (*Brassica campestris* ssp. *rapifera*), *Brassica rapa* L. ssp. *rapa* f. *teltowiensis*), scorzonera, Jerusalem artichoke, turnip-rooted parsley, parsnip, radish and horseradish;

[0057] tuber vegetables: preferably kohlrabi, beetroot, celeriac, garden radish; bulb crops: preferably scallion, leek and onions (planting onions and seed onions);

[0058] brassica vegetables: preferably headed cabbage (white cabbage, red cabbage, kale, savoy cabbage), cauliflowers, broccoli, curly kale, marrow-stem kale, seekale and Brussels sprouts;

[0059] fruiting vegetables: preferably tomatoes (outdoor tomatoes, vine-ripened tomatoes, beef tomatoes, greenhouse tomatoes, cocktail tomatoes, industrial and fresh market tomatoes), melons, eggplants, aubergines, pepper (sweet pepper and hot pepper, Spanish pepper), chilli pepper, pumpkins, courgettes and cucumbers (outdoor cucumbers, greenhouse cucumbers snake gourds and gherkins);

[0060] vegetable pulses: preferably bush beans (as sword beans, string beans, flageolet beans, wax beans, corn beans of green- and yellow-podded cultivars), pole beans (as sword beans, string beans, flageolet beans, wax beans of green-, blue- and yellow-podded cultivars), broadbeans (field beans, Windsor beans, cultivars having white- and black-spotted flowers), peas (chickling vetch, chickpeas, marrow peas, shelling peas, sugarpeas, smooth peas, cultivars having light- and dark-green fresh fruits) and lentils;

[0061] green vegetables and stem vegetables: preferably Chinese cabbage, round-headed garden lettuce, curled lettuce, lamb's-lettuce, iceberg lettuce, romaine lettuce, oakleaf lettuce, endives, radicchio, lollo rossa, rucola lettuce, chicory, spinach, chard (leaf chard and stem chard) and parsley;

[0062] other vegetables: preferably asparagus, rhubarb, chives, artichokes, mint varieties, sunflowers, Florence fennel, dill, garden cress, mustard, poppy seed, peanuts, sesame and salad chicory.

[0063] Bt vegetables including exemplary methods for preparing them are described in detail, for example, in Barton et al., 1987, Plant Physiol. 85: 1103-1109; Vaeck et al., 1987, Nature 328: 33-37; Fischhoff et al., 1987, Bio/Technology 5: 807-813. In addition, Bt vegetable plants are already known as commercial varieties, for example the potato cultivar NewLeaf® (Monsanto). The preparation of Bt vegetables is also described in U.S. Pat. No. 6,072,105.

[0064] Likewise, Bt cotton is already known in principle, for example from U.S. Pat. No. 5,322,938 or from Prietor-Samsonó et al., J. Ind. Microbiol. & Biotechn. 1997, 19, 202, and H. Agaisse and D. Lereclus, J. Bacteriol. 1996, 177, 6027. Different varieties of Bt cotton, too, are already commercially available, for example under the name NuCOTN® (Deltapine (USA)). In the context of the present invention, particular preference is given to Bt cotton NuCOTN33® and NuCOTN33B®.

[0065] The use and preparation of Bt maize has likewise already been known for a long time, for example from Ishida, Y., Saito, H., Ohta, S., Hiei, Y., Komari, T., and Kumashiro, T. (1996). High efficiency transformation of maize (*Zea mays* L.) mediated by *Agrobacterium tumefaciens*. Nature Biotechnology 4: 745-750. EP-B-0485506, too, describes the preparation of Bt maize plants. Furthermore, different varieties of Bt maize are commercially available, for example under the following names (company/companies is/are in each case given in brackets): KnockOut® (Novartis Seeds), NaturGard® (Mycogen Seeds), Yieldgard® (Novartis Seeds, Monsanto, Cargill, Golden Harvest, Pioneer, DeKalb inter alia), Bt-Xtra® (DeKalb) and StarLink® (Aventis CropScience, Garst inter alia). For the purpose of the present invention, particular preference is given especially to the following maize cultivars: KnockOut®, NaturGard®, Yieldgard®, Bt-Xtra® and StarLink®.

[0066] For rape, InVigor® cultivars resistant to the herbicide glufosinate are available and can be treated according to the invention. These cultivars are also distinguished by an improved crop yield.

[0067] For soya beans, too, Roundup®Ready cultivar or cultivars resistant to the herbicide Liberty Link® are available and can be treated according to the invention. In the case of rice, a large number of “Golden Rice” lines are available which are likewise characterized in that, by virtue of a transgenic modification, they have an increased content of provitamin A. They, too, are examples of plants which can be treated by the method according to the invention, with the advantages described.

[0068] The method according to the invention is suitable for controlling a large number of harmful organisms which occur in particular in vegetables, maize, soya bean, cotton, rice, tobacco, rape, potatoes, sugar beet and sunflowers preferably arthropods and nematodes, in particular insects and arachnids. The pests mentioned include:

[0069] From the order of the Isopoda, for example, *Oniscus asellus*, *Armadillidium vulgare*, *Porcellio scaber*.

[0070] From the order of the Diplopoda, for example, *Blaniulus guttulatus*.

[0071] From the order of the Chilopoda, for example, *Geophilus carpophagus*, *Scutigera* spp.

[0072] From the order of the Symphyla, for example, *Scutigera immaculata*.

[0073] From the order of the Thysanura, for example, *Lepisma saccharina*.

[0074] From the order of the Collembola, for example, *Onychiurus armatus*.

[0075] From the order of the Orthoptera, for example, *Acheta domesticus*, *Grylotalpa* spp., *Locusta migratoria migratorioides*, *Melanoplus* spp., *Schistocerca gregaria*.

[0076] From the order of the Blattaria, for example, *Blatta orientalis*, *Periplaneta americana*, *Leucophaea maderae*, *Blattella germanica*.

[0077] From the order of the Dermaptera, for example, *Forficula auricularia*.

[0078] From the order of the Isoptera, for example, *Reticulitermes* spp.

[0079] From the order of the Phthiraptera, for example, *Pediculus humanus corporis*, *Haematopinus* spp., *Linognathus* spp., *Trichodectes* spp., *Damalinia* spp.

[0080] From the order of the Thysanoptera, for example, *Hercinotrips femoralis*, *Thrips tabaci*, *Thrips palmi*, *Frankliniella occidentalis*.

[0081] From the order of the Heteroptera, for example, *Eurygaster* spp., *Dysdercus intermedius*, *Piesma quadrata*, *Cimex lectularius*, *Rhodnius prolixus*, *Triatoma* spp.

[0082] From the order of the Homoptera, for example, *Aleurodes brassicae*, *Bemisia tabaci*, *Trialeurodes vaporariorum*, *Aphis gossypii*, *Brevicoryne brassicae*, *Cryptomyzus ribis*, *Aphis fabae*, *Aphis pomi*, *Eriosoma lanigerum*, *Hyalopteris arundinis*, *Phylloxera vastatrix*, *Pemphigus* spp., *Macrosiphum avenae*, *Myzus* spp., *Phorodon humuli*, *Rhopalosiphum padi*, *Empoasca* spp., *uscelis bilobatus*, *Nephotettix cincticeps*, *Lecanium corni*, *Saissetia oleae*, *Laodelphax striatellus*, *Nilaparvata lugens*, *Aonidiella aurantii*, *Aspidiotus hederae*, *Pseudococcus* spp., *Psylla* spp.

[0083] From the order of the Lepidoptera, for example, *Pectinophora gossypiella*, *Bupalus piniarius*, *Chematobia brumata*, *Lithocolletis blancardella*, *Hyponomeuta padella*, *Plutella xylostella*, *Malacosoma neustria*, *Euproctis chrysor-*

rhoa, *Lymantria* spp., *Bucculatrix thurberiella*, *Phyllocnistis citrella*, *Agrotis* spp., *Euxoa* spp., *Feltia* spp., *Earia insulana*, *Heliothis* spp., *Mamestra brassicae*, *Panolis flammea*, *Spodoptera* spp., *Trichoplusia ni*, *Carpocapsa pomonella*, *Pieris* spp., *Chilo* spp., *Pyrausta nubilalis*, *Ephestia kuehniella*, *Galleria mellonella*, *Tineola bisselliella*, *Tinea pellionella*, *Hofmannophila pseudospretella*, *Cacoecia podana*, *Capua reticulana*, *Choristoneura fumiferana*, *Clysia ambiguella*, *Homona magnanima*, *Tortrix viridana*, *Cnaphalocerus* spp., *Oulema oryzae*.

[0084] From the order of the Coleoptera, for example, *Anobium punctatum*, *Rhizopertha dominica*, *Bruchidius obtectus*, *Acanthoscelides obtectus*, *Hylotrupes bajulus*, *Agelastica alni*, *Leptinotarsa decemlineata*, *Phaedon cochleariae*, *Diabrotica* spp., *Psylliodes chrysocephala*, *Epilachna varivestis*, *Atomaria* spp., *Oryzaephilus surinamensis*, *Anthonomus* spp., *Sitophilus* spp., *Otiorrhynchus sulcatus*, *Cosmopolites sordidus*, *Ceuthorrhynchus assimilis*, *Hypera postica*, *Dermestes* spp., *Trogoderma* spp., *Anthrenus* spp., *Attagenus* spp., *Lyctus* spp., *Meligethes aeneus*, *Ptinus* spp., *Niptus hololeucus*, *Gibbium psyllodes*, *Tribolium* spp., *Tenebrio molitor*, *Agriotes* spp., *Conoderus* spp., *Melolontha melolontha*, *Amphimallon solstitialis*, *Costelytra zealandica*, *Lissorhoptrus oryzophilus*.

[0085] From the order of the Hymenoptera, for example, *Diprion* spp., *Hoplocampa* spp., *Lasius* spp., *Monomorium pharaonis*, *Vespa* spp.

[0086] From the order of the Diptera, for example, *Aedes* spp., *Anopheles* spp., *Culex* spp., *Drosophila melanogaster*, *Musca* spp., *Fannia* spp., *Calliphora erythrocephala*, *Lucilia* spp., *Chrysomya* spp., *Cuterebra* spp., *Gastrophilus* spp., *Hyppobosca* spp., *Stomoxys* spp., *Oestrus* spp., *Hypoderma* spp., *Tabanus* spp., *Tannia* spp., *Bibio hortulanus*, *Oscinella frit*, *Phorbia* spp., *Pegomyia hyoscyami*, *Ceratitis capitata*, *Dacus oleae*, *Tipula paludosa*, *Hylemyia* spp., *Liriomyza* spp.

[0087] From the order of the Siphonaptera, for example, *Xenopsylla cheopis*, *Ceratophyllus* spp.

[0088] From the class of the Arachnida, for example, *Scorpio maurus*, *Latrodectus mactans*, *Acarus siro*, *Argas* spp., *Ornithodoros* spp., *Dermanyssus gallinae*, *Eriophyes ribis*, *Phyllocoptura oleivora*, *Boophilus* spp., *Rhipicephalus* spp., *Amblyomma* spp., *Hyalomma* spp., *Ixodes* spp., *Psoroptes* spp., *Chorioptes* spp., *Sarcoptes* spp., *Tarsonemus* spp., *Bryobia praetiosa*, *Panonychus* spp., *Tetranychus* spp., *Hemitarsonemus* spp., *Brevipalpus* spp.

[0089] The plant-parasitic nematodes include, for example, *Pratylenchus* spp., *Radopholus similis*, *Ditylenchus dipsaci*, *Tylenchulus semipenetrans*, *Heterodera* spp., *Globodera* spp., *Meloidogyne* spp., *Aphelenchoides* spp., *Longidorus* spp., *Xiphinema* spp., *Trichodorus* spp., *Bursaphelenchus* spp.

[0090] The method according to the invention is particularly suitable for treating sugar beet or Bt vegetables, Bt maize, Bt cotton, Bt soya beans, Bt tobacco, and also Bt rice, Bt potatoes, Bt rape or Bt sunflowers for controlling insects from the order of the Isoptera, for example, *Reticulitermes* spp., from the order of the Thysanoptera, for example, *Thrips tabaci*, *Thrips palmi*, *Frankliniella occidentalis*, from the order of the Heteroptera, for example, *Eurygaster* spp., *Dysdercus intermedius*, *Piesma quadrata*, from the order of the Homoptera, for example, *Aleurodes brassicae*, *Bemisia tabaci*, *Trialeurodes vaporariorum*, *Aphis gossypii*, *Brevicoryne brassicae*, *Cryptomyzus ribis*, *Aphis fabae*, *Aphis pomi*, *Eriosoma lanigerum*, *Phylloxera vastatrix*, *Pemphigus* spp.,

Macro-siphum avenae, *Myzus* spp., *Phorodon humuli*, *Rhopalosiphum padi*, *Empoasca* spp., *Nephotettix cincticeps*, *Lecanium corni*, *Saissetia oleae*, *Laodelphax striatellus*, *Nilaparvata lugens*, *Aonidiella aurantii*, *Pseudococcus* spp., *Psylla* spp., from the order of the Lepidoptera, for example, *Pectinophora gossypiella*, *Chematobia brumata*, *Lithocolletis blancardella*, *Hyponomeuta padella*, *Plutella xylostella*, *Euproctis chrysorrhoea*, *Lymantria* spp., *Phyllocnistis citrella*, *Agrotis* spp., *Earias insulana*, *Heliothis* spp., *Mamestra brassicae*, *Spodoptera* spp., *Trichoplusia ni*, *Carpocapsa pomonella*, *Pieris* spp., *Chilo* spp., *Pyrausta nubilalis*, *Ephesttia kuehniella*, *Capua reticulana*, *Clysia ambiguella*, *Tortrix viridana*, *Naphalocerus* spp., *Oulema oryzae*, from the order of the Coleoptera, for example, *Leptinotarsa decemlineata*, *Phaedon cochleariae*, *Diabrotica* spp., *Psylliodes chrysocephala*, *Epilachna varivestis*, *Atomaria* spp., *Oryzaephilus surinamensis*, *Anthonomus* spp., *Sitophilus* spp., *Otiorrhynchus sulcatus*, *Cosmopolites sordidus*, *Ceuthorrhynchus assimilis*, *Meligethes aeneus*, *Tribolium* spp., *Tenebrio molitor*, *Agriotes* spp., *Lissorhoptrus oryzophilus*, from the order of the Hymenoptera, for example, *Diprion* spp., *Hoplocampa* spp. or from the order of the Diptera, for example, *Oscinella frit*, *Phorbia* spp., *Pegomyia hyoscyami*, *Ceratitis capitata*, *Dacus oleae*, *Hylemyia* spp., *Liriomyza* spp.

[0091] The active compound combinations can be employed in customary formulations, such as solutions, emulsions, wettable powders, water- and oil-based suspensions, powders, dusts, pastes, soluble powders, soluble granules, granules for broadcasting, suspoemulsion concentrates, natural compounds impregnated with active compound, synthetic substances impregnated with active compound, fertilizers and also microencapsulations in polymeric substances.

[0092] These formulations are prepared in a known manner, for example by mixing the active compounds with extenders, i.e. liquid solvents and/or solid carriers, if appropriate using surfactants, i.e. emulsifiers and/or dispersants and/or foam-formers. The formulations are prepared either in suitable plants or else before or during application.

[0093] Wettable powders are preparations which can be dispersed homogeneously in water and which, in addition to the active compound and beside a diluent or inert substance, also comprise wetting agents, for example polyethoxylated alkylphenols, polyethoxylated fatty alcohols, alkylsulphonates or alkylphenylsulphonates and dispersants, for example sodium lignosulphonate, sodium 2,2'-dinaphthylmethane-6,6'-disulphonate.

[0094] Dusts are obtained by grinding the active compound with finely distributed solid substances, for example talc, natural clays, such as kaolin, bentonite, pyrophyllite or diatomaceous earth. Granules can be prepared either by spraying the active compound onto granular inert material capable of adsorption or by applying active compound concentrates to the surface of carrier substances, such as sand, kaolinites or granular inert material, by means of adhesives, for example polyvinyl alcohol, sodium polyacrylate or mineral oils. Suitable active compounds can also be granulated in the manner customary for the preparation of fertilizer granules—if desired as a mixture with fertilizers.

[0095] Suitable for use as auxiliaries are substances which are suitable for imparting to the composition itself and/or to preparations derived therefrom (for example spray liquors, seed dressings) particular properties such as certain technical

properties and/or also particular biological properties. Typical suitable auxiliaries are: extenders, solvents and carriers.

[0096] Suitable extenders are, for example, water, polar and nonpolar organic chemical liquids, for example from the classes of the aromatic and non-aromatic hydrocarbons (such as paraffins, alkylbenzenes, alkyl-naphthalenes, chlorobenzenes), the alcohols and polyols (which, if appropriate, may also be substituted, etherified and/or esterified), the ketones (such as acetone, cyclohexanone), esters (including fats and oils) and (poly)ethers, the unsubstituted and substituted amines, amides, lactams (such as N-alkylpyrrolidones) and lactones, the sulphones and sulphoxides (such as dimethyl sulphoxide).

[0097] If the extender used is water, it is also possible to employ, for example, organic solvents as auxiliary solvents. Essentially, suitable liquid solvents are: aromatics such as xylene, toluene or alkyl-naphthalenes, chlorinated aromatics and chlorinated aliphatic hydrocarbons such as chlorobenzenes, chloroethylenes or methylene chloride, aliphatic hydrocarbons such as cyclohexane or paraffins, for example petroleum fractions, mineral and vegetable oils, alcohols such as butanol or glycol and also their ethers and esters, ketones such as acetone, methyl ethyl ketone, methyl isobutyl ketone or cyclohexanone, strongly polar solvents such as dimethyl sulphoxide, and also water.

[0098] Suitable solid carriers are:

for example, ammonium salts and ground natural minerals such as kaolins, clays, talc, chalk, quartz, attapulgit, montmorillonite or diatomaceous earth, and ground synthetic minerals, such as finely divided silica, alumina and silicates; suitable solid carriers for granules are: for example, crushed and fractionated natural rocks such as calcite, marble, pumice, sepiolite and dolomite, and also synthetic granules of inorganic and organic meals, and granules of organic material such as paper, sawdust, coconut shells, maize cobs and tobacco stalks; suitable emulsifiers and/or foam-formers are: for example, nonionic and anionic emulsifiers, such as polyoxyethylene fatty acid esters, polyoxyethylene fatty alcohol ethers, for example alkylaryl polyglycol ethers, alkylsulphonates, alkyl sulphates, arylsulphonates and also protein hydrolysates; suitable dispersants are nonionic and/or ionic substances, for example from the classes of the alcohol-POE and/or -POP ethers, acid and/or POP POE esters, alkylaryl and/or POP POE ethers, fat and/or POP POE adducts, POE- and/or POP-polyol derivatives, POE- and/or POP-sorbitan or -sugar adducts, alkyl or aryl sulphates, alkyl- or arylsulphonates and alkyl or aryl phosphates or the corresponding POE-ether adducts. Furthermore, suitable oligo- or polymers, for example those derived from vinylic monomers, from acrylic acid, from EO and/or PO alone or in combination with, for example, (poly)alcohols or (poly)amines. It is also possible to employ lignin and its sulphonic acid derivatives, unmodified and modified celluloses, aromatic and/or aliphatic sulphonic acids and their adducts with formaldehyde.

[0099] Tackifiers such as carboxymethylcellulose and natural and synthetic polymers in the form of powders, granules or latices, such as gum arabic, polyvinyl alcohol and polyvinyl acetate, as well as natural phospholipids such as cephalins and lecithins, and synthetic phospholipids, can be used in the formulations.

[0100] It is possible to use colorants such as inorganic pigments, for example iron oxide, titanium oxide and Prussian Blue, and organic dyestuffs, such as alizarin dyestuffs, azo dyestuffs and metal phthalocyanine dyestuffs, and trace

nutrients such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

[0101] Other possible additives are perfumes, mineral or vegetable, optionally modified oils, waxes and nutrients (including trace nutrients), such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

[0102] Stabilizers, such as low-temperature stabilizers, preservatives, antioxidants, light stabilizers or other agents which improve chemical and/or physical stability may also be present.

[0103] These individual types of formulation are known in principle and are described, for example, in: Winnacker-Küchler, 1986, "Chemische Technologie" [Chemical Technology], Volume 7, 4th Ed., C. Hauser Verlag Munich; van Falkenberg, 1972-73, "Pesticides Formulations", 2nd Ed., Marcel Dekker N.Y.; Martens, 1979, "Spray Drying Handbook", 3rd Ed., G. Goodwin Ltd. London.

[0104] Based on his general expert knowledge, the person skilled in the art is able to choose suitable formulation auxiliaries (in this context, see, for example, Watkins, "Handbook of Insecticide Dust Diluents and Carriers", 2nd Ed., Darland Books, Caldwell N.J.; v. Olphen, "Introduction to Clay Colloid Chemistry", 2nd Ed., J. Wiley & Sons, N.Y.; Marsden, "Solvents Guide", 2nd Ed., Interscience, N.Y. 1950; McCutcheon's, "Detergents and Emulsifiers Annual", MC Publ. Corp., Ridgewood, N.J.; Sisley and Wood, "Encyclopedia of Surface Active Agents", Chem. Publ. Co. Inc., N.Y. 1964; Schönfeldt, "Grenzflächenaktive Äthylenoxidaddukte" [Surface-active Ethylene Oxide Adducts], Wiss. Verlagsgesell., Stuttgart 1967; Winnacker-Küchler, "Chemische Technologie" [Chemical Technology], Volume 7, 4th Ed., C. Hanser Verlag Munich 1986.

[0105] The active compound combinations according to the invention, in commercially available formulations and in the use forms prepared from these formulations, can be present in a mixture with other known active compounds such as insecticides, attractants, sterilants, bactericides, acaricides, nematocides, fungicides, growth regulators or herbicides. The insecticides include, for example, phosphoric esters, carbamates, carboxylic esters, chlorinated hydrocarbons, phenylureas, substances produced by microorganisms, and the like.

[0106] A mixture with other known active compounds such as fertilizers is also possible.

[0107] When used as insecticides, the active compound combinations according to the invention in their commercially available formulations and in the use forms which are

prepared from these formulations may furthermore be present as a mixture with synergists. Synergists are compounds by which the action of the active compounds is increased without it being necessary for the synergist added to be active itself.

[0108] In general, the formulations comprise from 0.01 to 98% by weight of active compound, preferably from 0.5 to 90%. In wettable powders, the active compound concentration is, for example, from about 10 to 90% by weight, the remainder to 100% by weight consisting of customary formulation components. In the case of emulsifiable concentrates, the active compound concentration can be from about 5 to 80% by weight. In most cases, formulations in the form of dusts comprise from 5 to 20% by weight of active compound, sprayable solutions comprise about 2 to 20% by weight. In the case of granules, the active compound content depends partially on whether the active compound is present in liquid or solid form and on which granulation auxiliaries, fillers, etc., are used.

[0109] The use is accomplished in a customary manner adapted to the use forms, preferably by means of leaf and drenching application.

[0110] The treatment according to the invention of the transgenic plants with the combinations of active compounds is effected directly or by action on their surroundings, habitat or storage space according to customary methods of treatment, for example by immersion, spraying, evaporating, pouring on, misting, scattering, painting on and in the case of propagation material, in particular in the case of seeds, further by applying one or more coats.

[0111] The required application rate may also vary with external conditions such as, inter alia, temperature and humidity. It may vary within wide limits, for example between 0.1 g/h and 5.0 kg/ha or more of active substance. Owing to the synergistic effects between Bt vegetables and the active compound combinations according to the invention, particular preference is given to application rates of from 0.1 to 500 g/ha. Particular preference is given to application rates of from 10 to 500 g/ha, especially preferred are 10 to 200 g/ha.

[0112] The active compound content of the use forms prepared from the commercial formulations may vary within wide limits. The active compound concentration of the use forms may be from 0.0000001 to 95% by weight of active compound and is, preferably between 0.0001 and 1% by weight.

TABLE 1

Structure affected or principle expressed	Feature of the plant/tolerance to
	Plant: Maize
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolepyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxymethanecarboxylic acid, cyclohexanedione
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation

TABLE 1-continued

nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazole, pyridine derivative, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1	xenobiotics and herbicides, such as sulphonylurea
dimboa biosynthesis (Bx1-Gen)	<i>Helminthosporium turcicum</i> , <i>Rhopalosiphum maydis</i> , <i>Diplodia maydis</i> , <i>Ostrinia nubilalis</i> , <i>Lepidoptera</i> sp.
CMIII (small basic peptide building block from maize grain)	plant pathogens e.g. <i>Fusarium</i> , <i>Alternaria</i> , <i>Sclerotinia</i>
Com-SAFP (zeamatin)	plant pathogens, e.g. <i>Fusarium</i> , <i>Alternaria</i> , <i>Sclerotinia</i> , <i>Rhizoctonia</i> , <i>Chaetomium</i> , <i>Phycomyces</i>
Hm1-gene	<i>Cochliobolus</i>
chitinases	plant pathogens
glucanases	plant pathogens
envelope proteins	viruses, such as the Maize dwarf mosaic virus (MDMV)
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxin, <i>Photorabdus</i> and <i>Xenorabdus</i> toxins	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
3-hydroxysteroid oxidase	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
peroxidase	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitors (LAPI)	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
limonene synthase	Western corn rootworm
lectin	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
protease inhibitors e.g. cystatin, patatin, virgiferin, CPTI	weevils, Western corn rootworm
ribosome-inactivating protein	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
5C9-maize polypeptide	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
HMG-CoA reductase	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprotis ipsilon</i> , Asian corn borer, weevils
Structure affected/protein expressed	Feature of the plant/tolerance to
	Plant: Wheat
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolepyrimidines, pyrimidyloxybenzoates, phthalides

TABLE 1-continued

acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanecarboxylic acid, cyclohexanedione
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphosate
glyphosate oxidoreductase	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
protoporphyrinogen oxidase (PROTOX)	xenobiotics and herbicides, such as sulphonylurea compounds
cytochrome P450 e.g. P450 SU1	plant pathogens, e.g. <i>Septoria</i> and <i>Fusarium</i>
antifungal polypeptide AlyAFP	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i>
glucose oxidase	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i>
pyrrolnitrin synthesis gene	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i>
serine/threonine kinases	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i> and other diseases
polypeptide having the effect of triggering a hypersensitivity reaction	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i> and other diseases
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	plant pathogens
glucanases	plant pathogens
double-strand ribonuclease	viruses such as, for example, BYDV and MSMV
envelope proteins	viruses such as, for example, BYDV and MSMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, Coleoptera, Diptera, nematodes
3-hydroxysteroid oxidase	Lepidoptera, Coleoptera, Diptera, nematodes
peroxidase	Lepidoptera, Coleoptera, Diptera, nematodes
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, Coleoptera, Diptera, nematodes
aminopeptidase inhibitor	Lepidoptera, Coleoptera, Diptera, nematodes
lectins	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
protease inhibitors, e.g. cystatin, patatin, virgiferin, CPTI	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
ribosome-inactivating protein	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
HMG-CoA reductase	Lepidoptera, Coleoptera, Diptera, nematodes, e.g. <i>Ostrinia nubilalis</i> , <i>Heliothis zea</i> , armyworms e.g. <i>Spodoptera frugiperda</i> , Western corn rootworm, <i>Sesamia</i> sp., <i>Aprodis ipsilon</i> , Asian corn borer, weevils
Plant: Barley	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolepyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanecarboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil

TABLE 1-continued

5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1	xenobiotics and herbicides, such as sulphonylurea compounds
antifungal polypeptide AlyAFP	plant pathogens, e.g. <i>Septoria</i> and <i>Fusarium</i>
glucose oxidase	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i>
pyrrolnitrin synthesis gene	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i>
serine/threonine kinases	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i> and other diseases
polypeptide having the effect of triggering a hypersensitivity reaction	plant pathogens, e.g. <i>Fusarium</i> , <i>Septoria</i> and other diseases
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	plant pathogens
glucanases	plant pathogens
double-strand ribonuclease	viruses such as, for example, BYDV and MSMV
envelope proteins	viruses such as, for example, BYDV and MSMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, Coleoptera, Diptera, nematodes
3-hydroxysteroid oxidase	Lepidoptera, Coleoptera, Diptera, nematodes
peroxidase	Lepidoptera, Coleoptera, Diptera, nematodes
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, Coleoptera, Diptera, nematodes
aminopeptidase inhibitor	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
lectins	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
protease inhibitors, e.g. cystatin, patatin, virgiferin, CPTI	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
ribosome-inactivating protein	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
HMG-CoA reductase	Lepidoptera, Coleoptera, Diptera, nematodes, aphids
Structure affected/principle expressed	Feature of the plant/tolerance to
Plant: Rice	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolepyrimidines, pyrimidyloxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxycarboxylic acid, cyclohexanedione
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1	xenobiotics and herbicides, such as sulphonylurea compounds
antifungal polypeptide AlyAFP	plant pathogens
glucose oxidase	plant pathogens
pyrrolnitrin synthesis gene	plant pathogens
serine/threonine kinases	plant pathogens
phenylalanine ammonia lyase (PAL)	plant pathogens, e.g. bacterial foliar mildew and inducible rice blast

TABLE 1-continued

phytoalexins	plant pathogens, e.g. bacterial foliar mildew and rice blast
B-1,3-glucanase (antisense)	plant pathogens, e.g. bacterial foliar mildew and rice blast
receptor kinase	plant pathogens, e.g. bacterial foliar mildew and rice blast
polypeptide having the effect of triggering a hypersensitivity reaction	plant pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	plant pathogens, e.g. bacterial foliar mildew and rice blast
glucanases	plant pathogens
double-strand ribonuclease	viruses such as, for example, BYDV and MSMV
envelope proteins	viruses such as, for example, BYDV and MSMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
3-hydroxysteroid oxidase	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
peroxidase	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
lectins	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
protease inhibitors	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers e.g. rice brown planthopper
ribosome-inactivating protein	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers, e.g. rice brown planthopper
HMG-CoA reductase	Lepidoptera, e.g. stem borer, Coleoptera, e.g. weevils such as <i>Lissorhoptrus oryzophilus</i> , Diptera, rice planthoppers e.g. rice brown planthopper
<u>Plant: Soya bean</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolepyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanecarboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides, such as sulphonylurea compounds

TABLE 1-continued

antifungal polypeptide AlyAFP	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
oxalate oxidase	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
glucose oxidase	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
pyrrolnitrin synthesis gene	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
serine/threonine kinases	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
phytoalexins	plant pathogens, e.g. bacterial foliar mildew and rice blast
B-1,3-glucanase (antisense)	plant pathogens, e.g. bacterial foliar mildew and rice blast
receptor kinase	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
polypeptide having the effect of triggering a hypersensitivity reaction	plant pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
glucanases	bacterial and fungal pathogens such as, for example, <i>Fusarium</i> , <i>Sclerotinia</i> , stem rot
double-strand ribonuclease	viruses such as, for example, BPMV and SbMV
envelope proteins	viruses such as, for example, BYDV and MSMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, Coleoptera, aphids
3-hydroxysteroid oxidase	Lepidoptera, Coleoptera, aphids
peroxidase	Lepidoptera, Coleoptera, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, Coleoptera, aphids
lectins	Lepidoptera, Coleoptera, aphids
protease inhibitors, e.g. virgiferin	Lepidoptera, Coleoptera, aphids
ribosome-inactivating protein	Lepidoptera, Coleoptera, aphids
HMG-CoA reductase	Lepidoptera, Coleoptera, aphids
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
hatching factor for cyst nematodes	cyst nematodes
principles for preventing food uptake	nematodes, e.g. root-knot nematodes and cyst nematodes
<u>Plant: Potato</u>	
Structure affected/protein expressed	Feature of the plant/tolerance to
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolepyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanoic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides, such as sulphonylurea compounds

TABLE 1-continued

polyphenol oxidase or polyphenol oxidase (antisense)	black spot
metallothionein	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
ribonuclease	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i>
antifungal polypeptide AlyAFP	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
oxalate oxidase	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
glucose oxidase	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
pyrrolnitrin synthesis gene	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
serine/threonine kinases	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
cecropin B	bacteria such as, for example, <i>Corynebacterium sepedonicum</i> , <i>Erwinia carotovora</i>
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
phytoalexins	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
B-1,3-glucanase (antisense)	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
receptor kinase	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
barnase	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
gene 49 for controlling disease resistance	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
trans-aldolase (antisense)	black spot
glucanases	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
double-strand ribonuclease	viruses such as, for example, PLRV, PVY and TRV
envelope proteins	viruses such as, for example, PLRV, PVY and TRV
17 kDa or 60 kDa protein	viruses such as, for example, PLRV, PVY and TRV
nuclear inclusion proteins, e.g. a or b	viruses such as, for example, PLRV, PVY and TRV
pseudoubiquitin	viruses such as, for example, PLRV, PVY and TRV
replicase	viruses such as, for example, PLRV, PVY and TRV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Coleoptera, e.g. Colorado beetle, aphids
3-hydroxysteroid oxidase	Coleoptera, e.g. Colorado beetle, aphids
peroxidase	Coleoptera, e.g. Colorado beetle, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Coleoptera, e.g. Colorado beetle, aphids
stilbene synthase	Coleoptera, e.g. Colorado beetle, aphids
lectins	Coleoptera, e.g. Colorado beetle, aphids
protease inhibitors, e.g. cystatin, patatin	Coleoptera, e.g. Colorado beetle, aphids
ribosomene-inactivating protein	Coleoptera, e.g. Colorado beetle, aphids
HMG-CoA reductase	Coleoptera, e.g. Colorado beetle, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
principles for preventing food uptake	nematodes, e.g. root-knot nematodes and cyst nematodes
Plant: Tomato	
Structure affected/principle expressed	Feature of the plant/tolerance to
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolepyrimidines, pyrimidylbenzoates, phthalides

TABLE 1-continued

acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanecarboxylic acid, cyclohexanedione
hydroxyphenylpyruvate dioxygenase (HPPD)	isooxazoles, such as isoxaflutol or isoxachlortol, triones, such as mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles, such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphosate
glyphosate oxidoreductase	glyphosate or sulphosate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
Cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides, such as sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	black spot
metallothionein	bacterial and fungal pathogens such as, for example, <i>Phytophthora</i>
ribonuclease	<i>Phytophthora</i> , <i>Verticillium</i> , <i>Rhizoctonia</i>
antifungal polypeptide AlyAFP	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
oxalate oxidase	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
glucose oxidase	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
pyrrolnitrin synthesis gene	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
serine/threonine kinases	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
cecropin B	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
Cf genes, e.g. Cf 9 Cf5 Cf4 Cf2	leaf mould
osmotin	early blight
alpha hordothionin	bacteria
systemin	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
polygalacturonase inhibitors	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
Prf control gene	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
12 <i>Fusarium</i> resistance site	<i>Fusarium</i>
phytoalexins	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.

TABLE 1-continued

B-1,3-glucanase (antisense)	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
receptor kinase	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
barnase	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
glucanases	bacterial and fungal pathogens such as, for example, bacterial blotch, <i>Fusarium</i> , soft rot, powdery mildew, foliar blight, leaf mould etc.
double-strand ribonuclease	viruses such as, for example, PLRV, PVY and ToMoV
envelope proteins	viruses such as, for example, PLRV, PVY and ToMoV
17 kDa or 60 kDa protein	viruses such as, for example, PLRV, PVY and ToMoV
nuclear inclusion proteins e.g. a or b or	viruses such as, for example, PLRV, PVY and ToMoV
nucleoprotein	TRV
pseudoubiquitin	viruses such as, for example, PLRV, PVY and ToMoV
replicase	viruses such as, for example, PLRV, PVY and ToMoV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorhabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera e.g. Heliothis, whitefly aphids
3-hydroxysteroid oxidase	Lepidoptera e.g. Heliothis, whitefly, aphids
peroxidase	Lepidoptera e.g. Heliothis, whitefly, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera e.g. Heliothis, whitefly, aphids
lectins	Lepidoptera e.g. Heliothis, whitefly, aphids
protease inhibitors, e.g. cystatin, patatin	Lepidoptera e.g. Heliothis, whitefly, aphids
ribosome-inactivating protein	Lepidoptera e.g. Heliothis, whitefly, aphids
stilbene synthase	Lepidoptera e.g. Heliothis, whitefly, aphids
HMG-CoA reductase	Lepidoptera e.g. Heliothis, whitefly, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
principles for preventing food uptake	nematodes, e.g. root-knot nematodes and cyst nematodes

Plant: Bell Pepper

Structure affected/protein expressed	Feature of the plant/tolerance to
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolopyrimidines, pyrimidylxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione

TABLE 1-continued

phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphasate
glyphosate oxidoreductase	glyphosate or sulphasate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial and fungal pathogens
metallothionein	bacterial and fungal pathogens
ribonuclease	bacterial and fungal pathogens
antifungal polypeptid AlyAFP	bacterial and fungal pathogens
oxalate oxidase	bacterial and fungal pathogens
glucose oxidase	bacterial and fungal pathogens
pyrrolnitrin synthesis genes	bacterial and fungal pathogens
serine/threonine kinases	bacterial and fungal pathogens
cecropin B	bacterial and fungal pathogens, rot, leaf mould, etc.
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial and fungal pathogens
osmotin	bacterial and fungal pathogens
alpha hordothionine	bacterial and fungal pathogens
systemin	bacterial and fungal pathogens
polygalacturonase inhibitors	bacterial and fungal pathogens
Prf control gene	bacterial and fungal pathogens
12 <i>Fusarium</i> resistance site	<i>Fusarium</i>
phytoalexins	bacterial and fungal pathogens
B-1,3-glucanase (antisense)	bacterial and fungal pathogens
receptor kinase	bacterial and fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens
barnase	bacterial and fungal pathogens
glucanases	bacterial and fungal pathogens
double-strand ribonuclease	viruses such as, for example, CMV, TEV
envelope proteins	viruses such as, for example, CMV, TEV
17 kDa or 60 kDa protein	viruses such as, for example, CMV, TEV
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as, for example, CMV, TEV
pseudobiquitin	viruses such as, for example, CMV, TEV
replicase	viruses such as, for example, CMV, TEV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, whitefly, aphids
3-hydroxysteroid oxidase	Lepidoptera, whitefly, aphids
peroxidase	Lepidoptera, whitefly, aphids
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, whitefly, aphids
aminopeptidase inhibitor	Lepidoptera, whitefly, aphids
lectins	Lepidoptera, whitefly, aphids
protease inhibitors, e.g. cystatin, patatin	Lepidoptera, whitefly, aphids
ribosome-inactivating protein	Lepidoptera, whitefly, aphids
stilbene synthase	Lepidoptera, whitefly, aphids
HMG-CoA reductase	Lepidoptera, whitefly, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
principles for preventing food uptake	nematodes, e.g. root-knot nematodes and cyst nematodes

TABLE 1-continued

Plant: Grapevines	
Structure affected/principle expressed	Feature of the plant/tolerance to
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones
acetyl-CoA carboxylase (ACCase)	triazolopyrimidines, pyrimidylloxybenzoates, phthalides
hydroxyphenylpyruvate dioxygenase (HPPD)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
phosphinothricin acetyltransferase	isoxazoles such as, for example, isoxaflutole or
O-methyl transferase	isoxachlortole, triones such as, for example,
glutamine synthetase	mesotrione or sulcotrione
adenylosuccinate lyase (ADSL)	phosphinothricin
adenylosuccinate synthase	modified lignin content
anthranilate synthase	glufosinate, bialaphos
nitrilase	inhibitors of IMP and AMP synthesis
5-enolpyruvyl-3-phosphoshikimate	inhibitors of adenylosuccinate synthesis
synthase (EPSPS)	inhibitors of tryptophan synthesis and
glyphosate oxidoreductase	degradation
protoporphyrinogen oxidase (PROTOX)	3,5-dihalo-4-hydroxybenzonitriles such as
cytochrome P450 e.g. P450 SU1 or selection	bromoxynil and loxynil
polyphenol oxidase or polyphenol oxidase	glyphosate or sulposate
(antisense)	diphenyl ethers, cyclic imides,
metallothionein	phenylpyrazoles, pyridine derivatives,
ribonuclease	phenopylate, oxadiazoles etc.
antifungal polypeptide AlyAFP	xenobiotics and herbicides such as, for
oxalate oxidase	example, sulphonylurea compounds
glucose oxidase	bacterial and fungal pathogens such as
pyrrolnitrin synthesis genes	<i>Botrytis</i> and powdery mildew
serine/threonine kinases	bacterial and fungal pathogens such as
cecropin B	<i>Botrytis</i> and powdery mildew
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	<i>Botrytis</i> and powdery mildew
osmotin	bacterial and fungal pathogens such as
alpha hordothionine	<i>Botrytis</i> and powdery mildew
systemin	bacterial and fungal pathogens such as
polygalacturonase inhibitors	<i>Botrytis</i> and powdery mildew
Prf control gene	bacterial and fungal pathogens such as
phytoalexins	<i>Botrytis</i> and powdery mildew
B-1,3-glucanase (antisense)	bacterial and fungal pathogens such as
receptor kinase	<i>Botrytis</i> and powdery mildew
polypeptide having the effect of triggering	bacterial and fungal pathogens such as <i>Botrytis</i>
a hypersensitivity reaction	and powdery mildew
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal
chitinases	pathogens
barnase	bacterial and fungal pathogens such as
	<i>Botrytis</i> and powdery mildew
	bacterial and fungal pathogens such as
	<i>Botrytis</i> and powdery mildew

TABLE 1-continued

glucanases	bacterial and fungal pathogens such as <i>Botrytis</i> and powdery mildew
double-strand ribonuclease	viruses
envelope proteins	viruses
17 kDa or 60 kDa protein	viruses
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses
pseudoubiquitin	viruses
replicase	viruses
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids
3-hydroxysteroid oxidase	Lepidoptera, aphids
peroxidase	Lepidoptera, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, aphids
lectins	Lepidoptera, aphids
protease inhibitors, e.g. cystatin, patatin	Lepidoptera, aphids
ribosome-inactivating protein	Lepidoptera, aphids
stilbene synthase	Lepidoptera, aphids, diseases
HMG-CoA reductase	Lepidoptera, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes or general diseases
CBI	root-knot nematodes
principles for preventing food uptake	nematodes, e.g. root-knot nematodes or root-cyst nematodes
Structure affected/protein expressed	Feature of the plant/tolerance to
<u>Plant: Oilseed rape</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolopyrimidines, pyrimidylxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphasate
glyphosate oxidoreductase	glyphosate or sulphasate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
metallothionein	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
ribonuclease	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
antifungal polypeptid AlyAFP	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
oxalate oxidase	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
glucose oxidase	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
pyrrolnitrin synthesis genes	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
serine/threonine kinases	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
cecropin B	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>

TABLE 1-continued

phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
Cf genes, e.g. Cf 9 Cf5 Cf4 Cf2	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
osmotin	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
alpha hordothionine	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
systemin	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
polygalacturonase inhibitors	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
Prf control gene	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
phytoalexins	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
B-1,3-glucanase (antisense)	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
receptor kinase	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
barnase	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
glucanases	nematodes
double-strand ribonuclease	bacterial and fungal pathogens such as <i>Cylindrosporium</i> , <i>Phoma</i> , <i>Sclerotinia</i>
envelope proteins	viruses
17 kDa or 60 kDa protein	viruses
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses
pseudoubiquitin	viruses
replicase	viruses
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids
3-hydroxysteroid oxidase	Lepidoptera, aphids
peroxidase	Lepidoptera, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, aphids
lectins	Lepidoptera, aphids
protease inhibitors, e.g. cystatin, patatin, CPTI	Lepidoptera, aphids
ribosome-inactivating protein	Lepidoptera, aphids
stilbene synthase	Lepidoptera, aphids, diseases
HMG-CoA reductase	Lepidoptera, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
Plant: <i>Brassica</i> vegetables (cabbage, Brussels sprouts etc.)	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolopyrimidines, pyrimidylxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil

TABLE 1-continued

5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial and fungal pathogens
metallothionein	bacterial and fungal pathogens
ribonuclease	bacterial and fungal pathogens
antifungal polypeptid AlyAFP	bacterial and fungal pathogens
oxalate oxidase	bacterial and fungal pathogens
glucose oxidase	bacterial and fungal pathogens
pyrrolnitrin synthesis genes	bacterial and fungal pathogens
serine/threonine kinases	bacterial and fungal pathogens
cecropin B	bacterial and fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens
Cf genes, e.g. Cf 9 Cf5 Cf4 Cf2	bacterial and fungal pathogens
osmotin	bacterial and fungal pathogens
alpha hordothionine	bacterial and fungal pathogens
systemin	bacterial and fungal pathogens
polygalacturonase inhibitors	bacterial and fungal pathogens
Prf control gene	bacterial and fungal pathogens
phytoalexins	bacterial and fungal pathogens
B-1,3-glucanase (antisense)	bacterial and fungal pathogens
receptor kinase	bacterial and fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
chitinases	bacterial and fungal pathogens
barnase	bacterial and fungal pathogens
glucanases	bacterial and fungal pathogens
double-strand ribonuclease	viruses
envelope proteins	viruses
17 kDa or 60 kDa protein	viruses
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses
pseudoubiquitin	viruses
replicase	viruses
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids
3-hydroxysteroid oxidase	Lepidoptera, aphids
peroxidase	Lepidoptera, aphids
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, aphids
lectins	Lepidoptera, aphids
protease inhibitors, e.g. cystatin, patatin, CPTI	Lepidoptera, aphids
ribosome-inactivating protein	Lepidoptera, aphids
stilbene synthase	Lepidoptera, aphids, diseases
HMG-CoA reductase	Lepidoptera, aphids
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
Plants: Pomaceous fruit, e.g. apples, pears	cyst nematodes
Structure affected/protein expressed	Feature of the plant/tolerance to sulphonylurea compounds, imidazolinones
acetolactate synthase (ALS)	triazolopyrimidines, pyrimidylxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, trienes such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis

TABLE 1-continued

adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphosate
glyphosate oxidoreductase	glyphosate or sulphosate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial and fungal pathogens such as storage scab on apples or fire-blight
metallothionein	bacterial and fungal pathogens such as storage scab on apples or fire-blight
ribonuclease	bacterial and fungal pathogens such as storage scab on apples or fire-blight
antifungal polypeptid AlyAFP	bacterial and fungal pathogens such as storage scab on apples or fire-blight
oxalate oxidase	bacterial and fungal pathogens such as storage scab on apples or fire-blight
glucose oxidase	bacterial and fungal pathogens such as storage scab on apples or fire-blight
pyrrolnitrin synthesis genes	bacterial and fungal pathogens such as storage scab on apples or fire-blight
serine/threonine kinases	bacterial and fungal pathogens such as storage scab on apples or fire-blight
cecropin B	bacterial and fungal pathogens such as storage scab on apples or fire-blight
phenylalanine ammonia lyase (PAL)	bacterial and fungal pathogens such as storage scab on apples or fire-blight
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial and fungal pathogens such as storage scab on apples or fire-blight
osmotin	bacterial and fungal pathogens such as storage scab on apples or fire-blight
alpha hordothionine	bacterial and fungal pathogens such as storage scab on apples or fire-blight
systemin	bacterial and fungal pathogens such as storage scab on apples or fire-blight
polygalacturonase inhibitors	bacterial and fungal pathogens such as storage scab on apples or fire-blight
Prf control gene	bacterial and fungal pathogens such as storage scab on apples or fire-blight
phytoalexins	bacterial and fungal pathogens such as storage scab on apples or fire-blight
B-1,3-glucanase (antisense)	bacterial and fungal pathogens such as storage scab on apples or fire-blight
receptor kinase	bacterial and fungal pathogens such as storage scab on apples or fire-blight
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial and fungal pathogens such as storage scab on apples or fire-blight
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial and fungal pathogens such as storage scab on apples or fire-blight
lysozyme	bacterial and fungal pathogens such as storage scab on apples or fire-blight
chitinases	bacterial and fungal pathogens such as storage scab on apples or fire-blight
barnase	bacterial and fungal pathogens such as storage scab on apples or fire-blight
glucanases	bacterial and fungal pathogens such as storage scab on apples or fire-blight
double-strand ribonuclease	viruses
envelope proteins	viruses
17 kDa or 60 kDa protein	viruses
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses
pseudoubiquitin	viruses
replicase	viruses
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photobacterium</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites

TABLE 1-continued

peroxidase	Lepidoptera, aphids, mites
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, aphids, mites
aminopeptidase inhibitor	
lectins	Lepidoptera, aphids, mites
protease inhibitors, e.g. cystatin, patatin, CPTI	Lepidoptera, aphids, mites
ribosome-inactivating protein	Lepidoptera, aphids, mites
stilbene synthase	Lepidoptera, aphids, diseases, mites
HMG-CoA reductase	Lepidoptera, aphids, mites
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
<u>Plant: Melon</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolopyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphasate
glyphosate oxidoreductase	glyphosate or sulphasate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial or fungal pathogens such as <i>Phytophthora</i>
metallothionein	bacterial or fungal pathogens such as <i>Phytophthora</i>
ribonuclease	bacterial or fungal pathogens such as <i>Phytophthora</i>
antifungal polypeptid AlyAFP	bacterial or fungal pathogens such as <i>Phytophthora</i>
oxalate oxidase	bacterial or fungal pathogens such as <i>Phytophthora</i>
glucose oxidase	bacterial or fungal pathogens such as <i>Phytophthora</i>
pyrrolnitrin synthesis genes	bacterial or fungal pathogens such as <i>Phytophthora</i>
serine/threonine kinases	bacterial or fungal pathogens such as <i>Phytophthora</i>
cecropin B	bacterial or fungal pathogens such as <i>Phytophthora</i>
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens such as <i>Phytophthora</i>
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens such as <i>Phytophthora</i>
osmotin	bacterial or fungal pathogens such as <i>Phytophthora</i>
alpha hordothionine	bacterial or fungal pathogens such as <i>Phytophthora</i>
systemin	bacterial or fungal pathogens such as <i>Phytophthora</i>
polygalacturonase inhibitors	bacterial or fungal pathogens such as <i>Phytophthora</i>
Prf control gene	bacterial or fungal pathogens such as <i>Phytophthora</i>
phytoalexins	bacterial or fungal pathogens such as <i>Phytophthora</i>

TABLE 1-continued

B-1,3-glucanase (antisense)	bacterial or fungal pathogens such as <i>Phytophthora</i>
receptor kinase	bacterial or fungal pathogens such as <i>Phytophthora</i>
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens such as <i>Phytophthora</i>
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens such as <i>Phytophthora</i>
lysozyme	bacterial or fungal pathogens such as <i>Phytophthora</i>
chitinases	bacterial or fungal pathogens such as <i>Phytophthora</i>
barnase	bacterial or fungal pathogens such as <i>Phytophthora</i>
glucanases	bacterial or fungal pathogens such as <i>Phytophthora</i>
double-strand ribonuclease	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
envelope proteins	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
17 kDa or 60 kDa protein	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
pseudoubiquitin	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
replicase	viruses such as CMV, PRSV, WMV2, SMV, ZYMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, whitefly
peroxidase	Lepidoptera, aphids, mites, whitefly
aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, aphids, mites, whitefly
lectins	Lepidoptera, aphids, mites, whitefly
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, whitefly
ribosome-inactivating protein	Lepidoptera, aphids, mites, whitefly
stilbene synthase	Lepidoptera, aphids, mites, whitefly
HMG-CoA reductase	Lepidoptera, aphids, mites, whitefly
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
<u>Plant: Banana</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolopyrimidines, pyrimidylxybenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds

TABLE 1-continued

polyphenol oxidase or polyphenol oxidase (antisense)	bacterial or fungal pathogens
metallothionein	bacterial or fungal pathogens
ribonuclease	bacterial or fungal pathogens
antifungal polypeptid AlyAFP	bacterial or fungal pathogens
oxalate oxidase	bacterial or fungal pathogens
glucose oxidase	bacterial or fungal pathogens
pyrrolnitrin synthesis genes	bacterial or fungal pathogens
serine/threonine kinases	bacterial or fungal pathogens
cecropin B	bacterial or fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens
osmotin	bacterial or fungal pathogens
alpha hordothionine	bacterial or fungal pathogens
systemin	bacterial or fungal pathogens
polygalacturonase inhibitors	bacterial or fungal pathogens
Prf control gene	bacterial or fungal pathogens
phytoalexins	bacterial or fungal pathogens
B-1,3-glucanase (antisense)	bacterial or fungal pathogens
receptor kinase	bacterial or fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens
lysozyme	bacterial or fungal pathogens
chitinases	bacterial or fungal pathogens
barnase	bacterial or fungal pathogens
glucanases	bacterial or fungal pathogens
double-strand ribonuclease	viruses such as the Banana Bunchy Top Virus (BBTV)
envelope proteins	viruses such as the Banana Bunchy Top Virus (BBTV)
17 kDa or 60 kDa protein	viruses such as the Banana Bunchy Top Virus (BBTV)
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as the Banana Bunchy Top Virus (BBTV)
pseudoubiquitin	viruses such as the Banana Bunchy Top Virus (BBTV)
replicase	viruses such as the Banana Bunchy Top Virus (BBTV)
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites, nematodes
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, nematodes
peroxidase	Lepidoptera, aphids, mites, nematodes
aminopeptidase inhibitors, e.g. leucine amino peptidase inhibitor	Lepidoptera, aphids, mites, nematodes
lectins	Lepidoptera, aphids, mites, nematodes
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, nematodes
ribosome-inactivating protein	Lepidoptera, aphids, mites, nematodes
stilbene synthase	Lepidoptera, aphids, mites, nematodes
HMG-CoA reductase	Lepidoptera, aphids, mites, nematodes
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
<u>Plant: Cotton</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolopyrimidines,
acetyl-CoA carboxylase (ACCase)	pyrimidylxybenzoates, phthalides
hydroxyphenylpyruvate dioxygenase (HPPD)	aryloxyphenoxycarboxylic acids, cyclohexanediones
phosphinothricin acetyltransferase	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
O-methyl transferase	phosphinothricin
glutamine synthetase	modified lignin content
adenylosuccinate lyase (ADSL)	glufosinate, bialaphos
adenylosuccinate synthase	inhibitors of IMP and AMP synthesis
	inhibitors of adenylosuccinate synthesis

TABLE 1-continued

anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphosate
glyphosate oxidoreductase	glyphosate or sulphosate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial or fungal pathogens
metallothionein	bacterial or fungal pathogens
ribonuclease	bacterial or fungal pathogens
antifungal polypeptid AlyAFP	bacterial or fungal pathogens
oxalate oxidase	bacterial or fungal pathogens
glucose oxidase	bacterial or fungal pathogens
pyrrolnitrin synthesis genes	bacterial or fungal pathogens
serine/threonine kinases	bacterial or fungal pathogens
cecropin B	bacterial or fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens
osmotin	bacterial or fungal pathogens
alpha hordothionine	bacterial or fungal pathogens
systemin	bacterial or fungal pathogens
polygalacturonase inhibitors	bacterial or fungal pathogens
Prf control gene	bacterial or fungal pathogens
phytoalexins	bacterial or fungal pathogens
B-1,3-glucanase (antisense)	bacterial or fungal pathogens
receptor kinase	bacterial or fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens
lysozyme	bacterial or fungal pathogens
chitinases	bacterial or fungal pathogens
barnase	bacterial or fungal pathogens
glucanases	bacterial or fungal pathogens
double-strand ribonuclease	viruses such as the wound tumour virus (WTV)
envelope proteins	viruses such as the wound tumour virus (WTV)
17 kDa or 60 kDa protein	viruses such as the wound tumour virus (WTV)
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as the wound tumour virus (WTV)
pseudoubiquitin	viruses such as the wound tumour virus (WTV)
replicase	viruses such as the wound tumour virus (WTV)
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites, nematodes, whitefly
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, nematodes, whitefly
peroxidase	Lepidoptera, aphids, mites, nematodes, whitefly
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, aphids, mites, nematodes, whitefly
aminopeptidase inhibitor	Lepidoptera, aphids, mites, nematodes, whitefly
lectins	Lepidoptera, aphids, mites, nematodes, whitefly
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, nematodes, whitefly
ribosome-inactivating protein	Lepidoptera, aphids, mites, nematodes, whitefly
stilbene synthase	Lepidoptera, aphids, mites, nematodes, whitefly
HMG-CoA reductase	Lepidoptera, aphids, mites, nematodes, whitefly
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes

TABLE 1-continued

Plant: Sugar cane	
Feature affected/protein expressed	Feature of the plant/tolerance to
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones
acetyl-CoA carboxylase (ACCase)	triazolopyrimidines, pyrimidylloxybenzoates, phthalides
hydroxyphenylpyruvate dioxygenase (HPPD)	aryloxyphenoxyalkane carboxylic acids, cyclohexanediones
phosphinothricin acetyltransferase	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
O-methyl transferase	phosphinothricin
glutamine synthetase	modified lignin content
adenylosuccinate lyase (ADSL)	glufosinate, bialaphos
adenylosuccinate synthase	inhibitors of IMP and AMP synthesis
anthranilate synthase	inhibitors of adenylosuccinate synthesis
	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
protoporphyrinogen oxidase (PROTOX)	xenobiotics and herbicides such as, for example, sulphonylurea compounds
cytochrome P450 e.g. P450 SU1 or selection	bacterial or fungal pathogens
polyphenol oxidase or polyphenol oxidase (antisense)	
metallothionein	bacterial or fungal pathogens
ribonuclease	bacterial or fungal pathogens
antifungal polypeptid AlyAFP	bacterial or fungal pathogens
oxalate oxidase	bacterial or fungal pathogens
glucose oxidase	bacterial or fungal pathogens
pyrrolnitrin synthesis genes	bacterial or fungal pathogens
serine/threonine kinases	bacterial or fungal pathogens
cecropin B	bacterial or fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens
osmotin	bacterial or fungal pathogens
alpha hordothionine	bacterial or fungal pathogens
systemin	bacterial or fungal pathogens
polygalacturonase inhibitors	bacterial or fungal pathogens
Prf control gene	bacterial or fungal pathogens
phytoalexins	bacterial or fungal pathogens
B-1,3-glucanase (antisense)	bacterial or fungal pathogens
receptor kinase	bacterial or fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens
lysozyme	bacterial or fungal pathogens, e.g. Clavibacter
chitinases	bacterial or fungal pathogens
chitinase	bacterial or fungal pathogens
glucanases	bacterial or fungal pathogens
double-strand ribonuclease	viruses such as SCMV, SrMV
envelope proteins	viruses such as SCMV, SrMV
17 kDa or 60 kDa protein	viruses such as SCMV, SrMV
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as SCMV, SrMV
pseudoubiquitin	viruses such as SCMV, SrMV
replicase	viruses such as SCMV, SrMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photobacterium</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
peroxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer

TABLE 1-continued

aminopeptidase inhibitors, e.g. leucine aminopeptidase inhibitor	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
lectins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
ribosome-inactivating protein	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
stilbene synthase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
HMG-CoA reductase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles such as e.g. the Mexican rice borer
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
Structure affected/protein expressed	Feature of the plant/tolerance to
Plant: Sunflower	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones triazolopyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkanoic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulphasate
glyphosate oxidoreductase	glyphosate or sulphasate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial or fungal pathogens
metallothionein	bacterial or fungal pathogens
ribonuclease	bacterial or fungal pathogens
antifungal polypeptid AlyAFP	bacterial or fungal pathogens
oxalate oxidase	bacterial or fungal pathogens, e.g. <i>Sclerotinia</i>
glucose oxidase	bacterial or fungal pathogens
pyrrolnitrin synthesis genes	bacterial or fungal pathogens
serine/threonine kinases	bacterial or fungal pathogens
cecropin B	bacterial or fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens
osmotin	bacterial or fungal pathogens
alpha hordothionine	bacterial or fungal pathogens
systemin	bacterial or fungal pathogens
polygalacturonase inhibitors	bacterial or fungal pathogens
Prf control gene	bacterial or fungal pathogens
phytoalexins	bacterial or fungal pathogens
B-1,3-glucanase (antisense)	bacterial or fungal pathogens
receptor kinase	bacterial or fungal pathogens

TABLE 1-continued

polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens
lysozyme	bacterial or fungal pathogens
chitinases	bacterial or fungal pathogens
barnase	bacterial or fungal pathogens
glucanases	bacterial or fungal pathogens
double-strand ribonuclease	viruses such as CMV, TMV
envelope proteins	viruses such as CMV, TMV
17 kDa or 60 kDa protein	viruses such as CMV, TMV
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as CMV, TMV
pseudoubiquitin	viruses such as CMV, TMV
replicase	viruses such as CMV, TMV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photobacterium</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
peroxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
aminopeptidase inhibitor	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
lectins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
ribosome-inactivating protein	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
stilbene synthase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
HMG-CoA reductase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced at nematode feeding sites	nematodes, e.g. root-knot nematodes and root-cyst nematodes
<u>Plants: Sugar beet, turnips</u>	
acetolactate synthase (ALS)	sulphonylurea compounds, imidazolinones, triazolopyrimidines, pyrimidylbenzoates, phthalides
acetyl-CoA carboxylase (ACCase)	aryloxyphenoxyalkylcarboxylic acids, cyclohexanediones
hydroxyphenylpyruvate dioxygenase (HPPD)	isoxazoles such as, for example, isoxaflutole or isoxachlortole, triones such as, for example, mesotrione or sulcotrione
phosphinothricin acetyltransferase	phosphinothricin
O-methyl transferase	modified lignin content
glutamine synthetase	glufosinate, bialaphos
adenylosuccinate lyase (ADSL)	inhibitors of IMP and AMP synthesis
adenylosuccinate synthase	inhibitors of adenylosuccinate synthesis
anthranilate synthase	inhibitors of tryptophan synthesis and degradation
nitrilase	3,5-dihalo-4-hydroxybenzonitriles such as bromoxynil and loxynil
5-enolpyruvyl-3-phosphoshikimate synthase (EPSPS)	glyphosate or sulposate
glyphosate oxidoreductase	glyphosate or sulposate
protoporphyrinogen oxidase (PROTOX)	diphenyl ethers, cyclic imides, phenylpyrazoles, pyridine derivatives, phenopylate, oxadiazoles etc.
cytochrome P450 e.g. P450 SU1 or selection	xenobiotics and herbicides such as, for example, sulphonylurea compounds
polyphenol oxidase or polyphenol oxidase (antisense)	bacterial or fungal pathogens
metallothionein	bacterial or fungal pathogens
ribonuclease	bacterial or fungal pathogens
antifungal polypeptid AlyAFP	bacterial or fungal pathogens
oxalate oxidase	bacterial or fungal pathogens, e.g. <i>Sclerotinia</i>

TABLE 1-continued

glucose oxidase	bacterial or fungal pathogens
pyrrolnitrin synthesis genes	bacterial or fungal pathogens
serine/threonine kinases	bacterial or fungal pathogens
cecropin B	bacterial or fungal pathogens
phenylalanine ammonia lyase (PAL)	bacterial or fungal pathogens
Cf genes, e.g. Cf9 Cf5 Cf4 Cf2	bacterial or fungal pathogens
osmotin	bacterial or fungal pathogens
alpha hordothionine	bacterial or fungal pathogens
systemin	bacterial or fungal pathogens
polygalacturonase inhibitors	bacterial or fungal pathogens
Prf control gene	bacterial or fungal pathogens
phytoalexins	bacterial or fungal pathogens
B-1,3-glucanase (antisense)	bacterial or fungal pathogens
AX + WIN-proteins	bacterial and fungal pathogens such as <i>Cercospora beticola</i>
receptor kinase	bacterial or fungal pathogens
polypeptide having the effect of triggering a hypersensitivity reaction	bacterial or fungal pathogens
systemic acquired resistance (SAR) genes	viral, bacterial, fungal and nematodal pathogens
lytic protein	bacterial or fungal pathogens
lysozyme	bacterial or fungal pathogens
chitinases	bacterial or fungal pathogens
barnase	bacterial or fungal pathogens
glucanases	bacterial or fungal pathogens
double-strand ribonuclease	viruses such as, for example, BNYYV
envelope proteins	viruses such as, for example, BNYYV
17 kDa or 60 kDa protein	viruses such as, for example, BNYYV
nuclear inclusion proteins e.g. a or b or nucleoprotein	viruses such as, for example, BNYYV
pseudoubiquitin	viruses such as, for example, BNYYV
replicase	viruses such as, for example, BNYYV
toxins of <i>Bacillus thuringiensis</i> , VIP 3, <i>Bacillus cereus</i> toxins, <i>Photorabdus</i> and <i>Xenorhabdus</i> toxins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
3-hydroxysteroid oxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
peroxidase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
aminopeptidase inhibitors, e.g. leucine	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
aminopeptidase inhibitor	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
lectins	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
protease inhibitors, e.g. cystatin, patatin, CPTI, virgiferin	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
ribosome-inactivating protein	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
stilbene synthase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
HMG-CoA reductase	Lepidoptera, aphids, mites, nematodes, whitefly, beetles, root-flies
hatching factor for cyst nematodes	cyst nematodes
barnase	nematodes, e.g. root-knot nematodes and cyst nematodes
beet cyst nematode resistance site	cyst nematodes
CBI	root-knot nematodes
principles for preventing food uptake induced	nematodes, e.g. root-knot nematodes and root-cyst nematodes

&&&	chloroacetanilides such as, for example, alachlor, acetochlor, dimethenamid	

TABLE 3-continued

Principle	Tolerance to	Plant
///	Prototox inhibitors: for example diphenyl ethers such as, for example, acifluorfen, acetonifene, bifenox, chlornitrofen, ethoxyfen, fluoroglycofen, fomesafen, lactofen, oxyfluorfen; imides such as, for example, azafenidin, carfentrazone-ethyl, cinidon-ethyl, flumiclorac-pentyl, flumioxazin, fluthiacet-methyl, oxadiargyl, oxadiazon, pentoxazone, sulfentrazone, imides and other compounds such as, for example, flumipropyn, flupropacil, nipyraclufen and thidiazimin; and also fluazola and pyraflufen-ethyl.	

TABLE 4

List of examples of transgenic plants having modified properties:

Transgenic plants	Transgenically modified properties
<i>Dianthus caryophyllus</i> (carnation) line 66 [Florigene Pty. Ltd.]	Longer-lasting as a result of reduced ethylene accumulation owing to the expression of ACC synthase; tolerant to sulphonylurea herbicides
<i>Dianthus caryophyllus</i> (carnation) lines 4, 11, 15, 16 [Florigene Pty. Ltd.]	Modified flower colour; tolerant to sulphonylurea herbicides
<i>Dianthus caryophyllus</i> (carnation) lines 959A, 988A, 1226A, 1351A, 1363A, 1400A [Florigene Pty. Ltd.]	Modified flower colour; tolerant to sulphonylurea herbicides
<i>Brassica napus</i> (Argentine oilseed rape) lines 23-18-17, 23-198 [Monsanto Company]	Modified fatty acid content in the seeds
<i>Zea mays</i> L. (maize) lines REN-00038-3 (LY038) [Monsanto Company]	Elevated lysine content
<i>Zea mays</i> L. (maize) lines REN-00038-3, MON-00810-6 (MON-00810-6 x LY038) [Monsanto Company]	Elevated lysine content, corn borer resistant
<i>Cucumis melo</i> (melon) lines A, B [Agritope Inc.]	Delayed maturity as a result of the expression of S-adenosylmethionine hydrolase
<i>Carica papaya</i> (papaya) lines 55-1/63-1 [Cornell University]	Resistant to the papaya ring spot virus (PRSV)
<i>Solanum tuberosum</i> L. (potato) lines RBMT21-129, RBMT21-350, RBMT22-082 [Monsanto Company]	Resistant to the Colorado beetle and the potato leaf roll virus (PLRV)
<i>Solanum tuberosum</i> L. (potato) lines RBMT15-101, SEMT15-02, SEMT15-15 [Monsanto Company]	Resistant to the Colorado beetle and the potato virus Y (PVY)
<i>Glycine max</i> L. (soya bean) lines DD-026005-3 (G94-1, G94-19, G168) [DuPont Canada Agricultural Products]	Modified fatty acid content in the seeds, in particular elevated oleic acid content
<i>Glycine max</i> L. (soya bean) lines OT96-15 [Agriculture & Agri-Food Canada]	Modified fatty acid content in the seeds, in particular reduced linolenic acid content
<i>Cucurbita pepo</i> (pumpkin) line ZW20 [Upjohn (USA); Seminis Vegetable Inc. (Canada)]	Resistant to viral infections, watermelon mosaic virus (WMV) 2 and zucchini yellow mosaic virus (ZYMV)
<i>Cucurbita pepo</i> (pumpkin) line CZW-3 [Asgrow (USA); Seminis Vegetable Inc. (Canada)]	Resistance to viral infections, cucumber mosaic virus (CMV), watermelon mosaic virus (WMV) 2 and zucchini yellow mosaic virus (ZYMV)
<i>Nicotiana tabacum</i> L. (tobacco) line Vector 21-41 [Vector Tobacco]	Reduced nicotine content
<i>Lycopersicon esculentum</i> (tomato) line 1345-4 [DNA Plant Technology]	Longer lasting as a result of reduced ethylene accumulation owing to the expression of ACC synthase
<i>Lycopersicon esculentum</i> (tomato) line 35 1 N [Agritope Inc.]	Delayed maturity as a result of the expression of S-adenosylmethionine hydrolase

TABLE 4-continued

<u>List of examples of transgenic plants having modified properties:</u>	
Transgenic plants	Transgenically modified properties
<i>Lycopersicon esculentum</i> (tomato) line CGN-89322-3 (8338) [Monsanto Company]	Delayed maturity as a result of the expression of ACCd
<i>Lycopersicon esculentum</i> (tomato) lines B, Da, F [Zeneca Seeds]	Delayed softening as a result of a reduced expression of polygalacturonase
<i>Lycopersicon esculentum</i> (tomato) line CGN-89564-2 (FLAVR SAVR) [Calgene Inc.]	Delayed softening as a result of a reduced expression of polygalacturonase

[0113] The good effect of the present invention's combinations of insecticides and transgenic plants is apparent from the examples which follow. The combinations display an effect which exceeds a simple summing of effects.

[0114] A synergistic effect in insecticides and acaricides is always present when the effect of the present invention's combinations is greater than the expected effect, which for a given combination can be calculated after S. R. Colby, Weeds 15 (1967), 20-22 as follows:

when

[0115] X is the kill rate expressed in % of the untreated control on using active compound A at an application rate of m g/ha or in a concentration of m ppm,

[0116] Y is the kill rate expressed in % of the untreated control on using active compound B at an application rate of n g/ha or in a concentration of n ppm and

[0117] Z is the kill rate expressed in % of the untreated control on using active compound C at an application rate of r g/ha or in a concentration of r ppm,

[0118] E is the efficacy on using active compounds A and B and C in application rates of m and n and r g/ha then

$$E = X + Y + Z - \frac{(X \cdot Y + X \cdot Z + Y \cdot Z)}{100} + \frac{X \cdot Y \cdot Z}{10000}$$

[0119] If the actual kill rate is greater than calculated, then the killing effect of the combination is superadditive, i.e., a synergistic effect is present. In this case, the actually observed kill rate has to be greater than that calculated from the above-recited formula for the expected kill rate (E).

EXAMPLES

[0120] The invention is more particularly elucidated by the examples which follow without being restricted by them.

Example 1

Leaf Application for *Aphis gossypii*/Cotton

[0121] Individually potted transgenic cotton plants with Lepidoptera resistance and herbicide resistance (line DP444 BG/RR) are treated with the desired product against the cotton aphid (*Aphis gossypii*).

[0122] After the desired time, the kill in % is determined 100% means that all the aphids were killed; 0% means that no aphids were killed.

[0123] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

TABLE B1-1

<u><i>Aphis gossypii</i> - test (leaf application)</u>			
Active compound	Concentration in ppm	Kill in % after 4 d	
(I-1)	0.16	0	
Fipronil	4	25	
DP 444 BG/RR		0	
Cry1Ac&cp4 epsps		obs.*	calc.**
(I-1) + Fipronil 1:25 onto DP 444 BG/RR according to the invention	0.16 + 4	80	25

*obs. = activity observed

**calc. = activity calculated by Colby formula

Example 2

Leaf Application for *Heliothis armigera*/Cotton

[0124] Individually potted transgenic cotton plants with Lepidoptera resistance and herbicide resistance (line DP444 BG/RR) are treated with the desired product against the cotton boll worm (*Heliothis armigera*).

[0125] After the desired time, the kill in % is determined 100% means that all the caterpillars were killed; 0% means that no caterpillars were killed.

[0126] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

TABLE B2-1

<u><i>Heliothis armigera</i> - test (leaf application)</u>		
Active compound	Concentration in ppm	Kill in % after 4 d
(I-1)	0.032	50
Abamectin	0.16	30
Clothianidin	0.16	0
Spinosad	0.16	20
DP 444 BG/RR		0
Cry1Ac&cp4 epsps		

TABLE B2-1-continued

<i>Heliothis armigera</i> - test (leaf application)			
Active compound	Concentration in ppm	Kill in % after 4 d	
		obs.*	calc.**
(I-1) + Abamectin 1:5 onto DP 444 BG/RR	0.032 + 0.16	90	65
according to the invention			
(I-1) + Clothianidin 1:5 onto DP 444 BG/RR	0.032 + 0.16	100	50
according to the invention			
(I-1) + Spinosad 1:5 onto DP 444 BG/RR	0.032 + 0.16	80	60
according to the invention			

*obs. = activity observed

**calc. = activity calculated by Colby formula

Example 3

Leaf Application for *Spodoptera frugiperda*/Cotton

[0127] Individually potted transgenic cotton plants with Lepidoptera resistance and herbicide resistance (line DP444 BG/RR) are treated with the desired product against the army worm (*Spodoptera frugiperda*)

[0128] After the desired time, the kill in % is determined 100% means that all the caterpillars were killed; 0% means that no caterpillars were killed.

[0129] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

TABLE B3-1

<i>Spodoptera frugiperda</i> - test (leaf application)

according to the invention			

*obs. = activity observed

**calc. = activity calculated by Colby formula

Example 4

Leaf Application for *Spodoptera exigua*/Maize

[0130] Pots each holding 5 transgenic maize plants with Lepidoptera, Coleoptera and/or herbicide resistance are treated in 2 replications against the small mottled willow (*Spodoptera exigua*).

[0131] After the desired time, the kill in % is determined 100% means that all the caterpillars were killed; 0% means that no caterpillars were killed.

[0132] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

Example 5

Leaf Application for *Spodoptera frugiperda*/Maize

[0133] Pots each holding 5 transgenic maize plants with Lepidoptera, Coleoptera and/or herbicide resistance are treated in 2 replications against the army worm (*Spodoptera frugiperda*).

[0134] After the desired time, the kill in % is determined 100% means that all the caterpillars were killed; 0% means that no caterpillars were killed.

[0135] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

Example 6

Drench Application for *Spodoptera frugiperda*/Maize

[0136] The earth of the pots each with 5 transgenic maize plants with Lepidoptera, Coleoptera and/or herbicide resistance is drenched with the desired product. Then, the plants are infected with larvae of the army worm (*Spodoptera frugiperda*).

[0137] After the desired time, the kill in % is determined 100% means that all the caterpillars were killed; 0% means that no caterpillars were killed.

[0138] Compared with the control plants not treated according to the invention, a distinct improvement in the control of the pests is evident.

*obs. = activity observed
**calc. = activity calculated by Colby formula

1. Method for improving the utilization of the production potential of a transgenic plant, comprising treating the plant with an effective amount of a mixture of at least one compound of the formula I

where R1 represents chlorine or cyano
and at least one compound of group II,

(1) acetylcholinesterase (AChE) inhibitors, optionally selected from carbamates, alanycarb, aldicarb, aldoxycarb, allylcarb, aminocarb, bendiocarb, benfuracarb, bufencarb, butacarb, butocarboxim, butoxycarboxim, carbaryl, carbofuran, carbosulfan, cloethocarb, dimetilan, ethiofencarb, fenobucarb, fenothiocarb, formetanate, furathiocarb, isoprocarb, metam-sodium, methiocarb, methomyl, metolcarb, oxamyl, pirimicarb, promecarb, propoxur, thiodicarb, thiofanox, trimethacarb, XMC, and xylcarb; or

organophosphates, acephate, azamethiphos, azinphos (-methyl, -ethyl), bromophos-ethyl, bromfenvinphos (-methyl), butathiofos, cadusafos, carbophenothion, chlorethoxyfos, chlorfenvinphos, chlormephos, chlorpyrifos (-methyl/-ethyl), coumaphos, cyanofenphos, cyanophos, chlorfenvinphos, demeton-S-methyl, deme-

- ton-S-methylsulphon, dialifos, diazinon, dichlofenthion, dichlorvos/DDVP, dicotophos, dimethoate, dimethylvinphos, dioxabenzofos, disulfoton, EPN, ethion, ethoprophos, etrimfos, famphur, fenamiphos, fenitrothion, fensulfothion, fenthion, flupyrzofos, fonofos, formothion, fosmethilan, fothiazate, heptenophos, iodofenphos, iprobenfos, isazofos, isofenphos, isopropyl, O-salicylate, isoxathion, malathion, mecarbam, methacrifos, methamidophos, methidathion, mevinphos, monocrotophos, naled, omethoate, oxydemeton-methyl, parathion (-methyl/-ethyl), phenthoate, phorate, phosalone, phosmet, phosphamidon, phosphocarb, phoxim, pirimiphos (-methyl/-ethyl), profenofos, propaphos, propetamphos, prothiofos, prothoate, pyraclofos, pyridaphenthion, pyridathion, quinalphos, sebufos, sulfotep, sulprofos, tebupirimfos, temephos, terbufos, tetra-chlorvinphos, thiometon, triazophos, triclofon, vamidothion, and imicyafos.
- (2) GABA-gated chloride channel antagonists, optionally selected from organochlorines, camphechlor, chlordane, endosulfan, gamma-HCH, HCH, heptachlor, lindane, and methoxychlor; or
- fiproles (phenylpyrazoles), acetoprole, ethiprole, fipronil, pyrafluprole, pyriprole, and vaniliprole.
- (3) Sodium channel modulators/voltage-dependent sodium channel blockers, optionally selected from pyrethroids, acrinathrin, allethrin (d-cis-trans, d-trans), beta-cyfluthrin, bifenthrin, bioallethrin, bioallethrin S-cyclopentyl isomer, bioethanomethrin, biopermethrin, bioresmethrin, chlovaporthrin, cis-cypermethrin, cis-resmethrin, cis-permethrin, clocythrion, cycloprothrin, cyfluthrin, cyhalothrin, cypermethrin (alpha-, beta-, theta-, zeta-), cyphenothrin, deltamethrin, empenethrin (1R isomer), esfenvalerate, etofenprox, fenfluthrin, fenpropathrin, fenpyrithrin, fenvalerate, flubrocyrthinate, flucythrinate, flufenprox, flumethrin, fluvalinate, fubfenprox, gamma-cyhalothrin, imiprothrin, kade-thrin, lambda-cyhalothrin, metofluthrin, permethrin (cis-, trans-), phenothrin (1R trans isomer), prallethrin, profluthrin, protrifenbutate, pyresmethrin, resmethrin, RU 15525, silafluofen, tau-fluvalinate, tefluthrin, terallethrin, tetramethrin (-1R-isomer), tralomethrin, trans-fluthrin, ZXI 8901, pyrethrin (pyrethrum), eflusilanat; DDT; or methoxychlor.
- (4) Nicotinic acetylcholine receptor agonists/antagonists, optionally selected from chloronicotinyls, acetamiprid, clothianidin, dinotefuran, imidacloprid, imidaclothiz, nitenpyram, nithiazine, thiachloprid, thiamethoxam, AKD-1022, nicotine, bensultap, cartap, thiosultap-sodium, and thiocylam.
- (5) Allosteric acetylcholine receptor modulators (agonists), optionally selected from spinosyns, spinosad and spinetoram.
- (6) Chloride channel activators, optionally selected from mectins/macrolides, abamectin, emamectin, emamectin benzoate, ivermectin, lepimectin, and milbemectin; or juvenile hormone analogues, hydroprene, kinoprene, methoprene, epofenonane, triprene, fenoxycarb, pyriproxifen, and diofenolan.
- (7) Active compounds with unknown or non-specific mechanisms of action, optionally selected from gassing agents, methyl bromide, chloropicrin and sulfuryl fluoride; selective antifeedants, cryolite, pymetrozine, pyri-fluquinazon and flonicamid; or mite growth inhibitors, clofentazine, hexythiazox, etoxazole.
- (8) Oxidative phosphorylation inhibitors, ATP disruptors, optionally selected from diafenthiuron; organotin compounds, azocyclotin, cyhexatin and fenbutatin oxide; or
- propargite, tetradifon.
- (9) Oxidative phosphorylation decouplers acting by interrupting the H proton gradient, optionally selected from chlorfenapyr, binapacryl, dinobuton, dinocap and DNOC.
- (10) Microbial disruptors of the insect gut membrane, optionally selected from *Bacillus thuringiensis* strains.
- (11) Chitin biosynthesis inhibitors, optionally selected from benzoylureas, bistrifluoron, chlorflazuron, diflubenzuron, fluaazuron, flucycloxuron, flufenoxuron, hexaflumuron, lufenuron, novaluron, noviflumuron, penfluron, teflubenzuron or triflumuron.
- (12) Buprofezin.
- (13) Moulting disruptors, for example cyromazine.
- (14) Ecdysone agonists/disruptors, optionally selected from diacylhydrazines, chromafenozide, halofenozide, methoxyfenozide, tebufenozide, and flutenozide; or azadirachtin.
- (15) Octopaminergic agonists, optionally selected from amitraz.
- (16) Site III electron transport inhibitors/site II electron transport inhibitors, optionally selected from hydramethylnon; acequinocyl; fluacrypyrim; or cyflumetofen and cyenopyrafen.
- (17) Electron transport inhibitors, optionally selected from site I electron transport inhibitors, from the group of the METI acaricides, fenazaquin, fenpyroximate, pyrimidifen, pyridaben, tebufenpyrad, tolfenpyrad, and rotenone; or
- voltage-dependent sodium channel blockers, indoxacarb and metaflumizone.
- (18) Fatty acid biosynthesis inhibitors, optionally selected from tetroneic acid derivatives, spirodiclofen and spiromesifen; or
- tetramic acid derivatives, e.g. spirotetramat.
- (19) Neuronal inhibitors with unknown mechanism of action, bifenazate.
- (20) Ryanodine receptor effectors, for example diamides, flubendiamide or (R),(S)-3-chloro-N¹-{2-methyl-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]phenyl}-N²-(1-methyl-2-methylsulphonylethyl)phthalamide.
- (21) Further active compounds with unknown mechanism of action, optionally selected from amidoflumet, benclotiaz, benzoximate, bromopropylate, buprofezin, chinomethionat, chlordimeform, chlorobenzilate, clothiazoben, cycloprene, dicofol, dicyclanil, fenoxacrim, fentripanil, flubenzimine, flufennerim, flutenzin, gossypure, japonilure, metoxadiazone, petroleum, potassium oleate, pyridalyl, sulfluramid, tetrasul, triarathene or verbutin; or the following known active compounds:
- 4-[[[(6-bromopyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one (known from WO 2007/115644), 4-[[[(6-fluoropyrid-3-yl)methyl](2,2-difluoroethyl)amino]furan-2(5H)-one, 4-[[[(2-chloro-1,3-thiazol-5-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one, 4-[[[(6-chloropyrid-3-yl)methyl](2-fluoroethyl)amino]furan-2(5H)-one, 4-[[[(6-chloropyrid-3-yl)methyl](2,2-difluoroethyl)

amino}furan-2(5H)-one, 4-{[(6-chloro-5-fluoropyrid-3-yl)methyl](methylamino)}furan-2(5H)-one, 4-{[(5,6-dichloropyrid-3-yl)methyl](2-fluoroethyl)amino}furan-2(5H)-one, 4-{[(6-chloro-5-fluoropyrid-3-yl)methyl](cyclopropylamino)}furan-2(5H)-one, 4-{[(6-chloropyrid-3-yl)methyl](cyclopropylamino)}furan-2(5H)-one, 4-{[(6-chloropyrid-3-yl)methyl](methylamino)}furan-2(5H)-one, [(6-chloropyridin-3-yl)methyl](methyl)oxido- λ^4 -sulfanylidene cyanamide, [1-(6-chloropyridin-3-yl)ethyl](methyl)oxido- λ^4 -sulfanylidene cyanamide and its diastereomers (A) and (B)

[(6-trifluoromethylpyridin-3-yl)methyl](methyl)oxido- λ^4 -sulfanylidene cyanamide, or [1-(6-trifluoromethylpyridin-3-yl)ethyl](methyl)oxido- λ^4 -sulfanylidene cyanamide and its diastereomers (C) and (D)

-continued

2. Method according to claim 1, wherein said mixture comprises at least one compound of formula I and at least one compound of group II, and optionally at least one further active co-component.

3. Method according to claim 1, wherein the plant has at least one genetically modified structure or a tolerance according to Table 1.

4. Method according to claim 1, wherein the plant has at least one modified principle of action according to Table 3.

5. Method according to claim 1, wherein the plant is a transgenic plant according to Table 4.

6. Method according to claim 1, wherein the plant contains at least one genetic modification according to Table 2.

7. Method according to claim 1, wherein the transgenic plant contains at least one gene or a gene fragment coding for a Bt toxin.

8. Method according to claim 1, wherein the transgenic plant comprises at least one herbicide resistance.

9. Method according to claim 1, wherein the transgenic plant is a vegetable plant, maize plant, soya bean plant, cotton plant, tobacco plant, rice plant, rape plant, sugar beet plant, sunflower plant or potato plant.

10. Method according to claim 1, wherein the mixture of at least one compound of formula I and at least one compound of group (II) are used for controlling insects from the order Isoptera, Thysanoptera, Homoptera, Heteroptera, Lepidoptera, Coleoptera, Hymenoptera and/or Diptera.

11. Method according to claim 1, wherein an application rate from 0.1 g/ha to 5.0 kg/ha, is employed.

12. Method of claim 1, wherein an application rate from 0.1 g/ha to 5.0 kg/ha, is employed.

13. Method of claim 1, wherein an application rate from 10 g/ha to 500 kg/ha, is employed.

14. Method of claim 1, wherein an application rate from 10 g/ha to 200 kg/ha, is employed.
