United States Patent Office.

E. B. MANNING, OF MIDDLETOWN, CONNECTICUT.

Letters Patent No. 86,849, dated February 9, 1869.

IMPROVEMENT IN THE CONSTRUCTION OF TEA-POTS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern :

Be it known that I, E. B. MANNING, of Middletown, in the county of Middlesex, and State of Connecticut, have invented a new Improvement in Tea-Pots; and I do hereby declare the following, when taken in connection with the accompanying drawings, and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent, in—

Figure 1, a side view, and in

Figure 2, vertical central section.

This invention relates to an improvement in the patent granted to me August 18, 1868, for improvement in tea and coffee-pot, the object being to construct a tea-pot with a metallic exterior and a mineral inner surface, in order to overcome the difficulties which are experienced in tea-drawers with a metallic inner surface; and

The invention consists in the construction of a mineral or earthen pot, or body, and covering the exterior surface with suitable metal, which may be formed thereon.

To enable others to understand my invention, I will fully describe the same as illustrated in the accompanying drawings.

I first form a pot, of the desired size and shape, from

any suitable material of a mineral or earthen nature, and when the pot so formed is hard, either by baking, or other curing, then I cover the exterior surface with any suitable metal, as britannia, tin, &c., spinning or otherwise fitting the metal covering to the earthen pot, and attaching to the metal a spout, handle, and cover, in the usual manner.

In fig. 2, *a* represents the earthen or mineral pot, formed with an opening at *d*, for the pouring out of the tea; the metal covering, spout, and handle, are represented in black, thus, in its external appearance, resembling in every way a metal pot.

This construction is an improvement on my patent before referred to, inasmuch as it is cheaper, and presents a surface equally as unobjectionable.

Having fully described my invention,

What I claim as new and useful, and desire to secure by Letters Patent, is—

The herein-described tea or coffee-pot, consisting of a mineral or earthen pot, covered externally with metal, substantially in the manner set forth.

E. B. MANNING.
