BUCCAL, POLAR AND NON-POLAR SPRAY CONTAINING DIAZEPAM**CROSS REFERENCE TO RELATED APPLICATIONS**

[0001] This application is a continuation-in-part of application no. 10/230,060, filed August 29, 2002, pending, which is a continuation-in-part of application no. 09/537,118, filed March 29, 2000 which is a continuation-in-part of the U.S. national phase designation of PCT/US97/17899, filed October 1, 1997, the disclosures of which are incorporated by reference herein in their entirety.

BACKGROUND OF THE INVENTION

[0002] It is known that certain biologically active compounds are better absorbed through the oral mucosa than through other routes of administration, such as through the stomach or intestine. However, formulations suitable for such administration by these latter routes present their own problems. For example, the biologically active compound must be compatible with the other components of the composition such as propellants, solvents, etc. Many such formulations have been proposed. For example, U.S.P. 4,689,233, Dvorsky et al., describes a soft gelatin capsule for the administration of the anti-coronary drug nifedipine dissolved in a mixture of polyether alcohols. U.S.P. 4,755,389, Jones et al., describes a hard gelatin chewable capsule containing nifedipine. A chewable gelatin capsule containing a solution or dispersion of a drug is described in U.S.P. 4,935,243, Borkan et al. U.S.P. 4,919,919, Aouda et al, and U.S.P. 5,370,862, Klokke-Bethke, describe a nitroglycerin spray for administration to the oral mucosa comprising nitroglycerin, ethanol, and other components. An orally administered pump spray is described by Cholcha in U.S.P. 5,186,925. Aerosol compositions containing a hydrocarbon propellant and a drug for administration to a mucosal surface are described in U.K. 2,082,457, Su, U.S.P. 3,155,574, Silson et al., U.S.P. 5,011,678, Wang et al., and by Parnell in U.S.P. 5,128,132. It should be noted that these references discuss bioavailability of solutions by inhalation rather than through the membranes to which they are administered.

[0003] Diazepam is a benzodiazepine derivative having the structure depicted below:

[0004] The chemical name for diazepam is 7-chloro-1,3-dihydro-1-methyl-5-phenyl-2H-1,4-benzodiazepin-2-one and is commonly known under the trade name as valium®.

[0005] Diazepam is used to manage anxiety, especially for the short term relief of anxiety and for the treatment of panic attacks. Anxiety is a fear, apprehension, or dread of impending danger often accompanied by restlessness, tension, tachycardia, and dyspnea. Other symptoms commonly associated with anxiety include depression, especially accompanied with dysthymic disorder (chronic “neurotic” depression); panic disorder; agoraphobia and other specific phobias; eating disorders; and many personality disorders. Often anxiety is unattached to a clearly identified treatable primary illness. If a primary illness is found, however, it can be desirable to deal with the anxiety at the same time as the primary illness. To treat anxiety, diazepam is typically administered orally at a dose of 4 to 40 mg daily or parenterally at a dose of 2 to 20 mg (that may be repeated after 3 to 4 hours) (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 372, 421-422). Diazepam is also useful as a sedative.

[0006] Diazepam is also used as a pre-anesthetic medication and for the induction and maintenance of anesthesia. Diazepam is also administered as the sole agent for procedures that do not require analgesia such as endoscopy, cardioversion, cardiac catheterization, and radiodiagnostic procedures (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 324). Diazepam is typically administered orally at a dose of 5 to 10 mg when used as a pre-anesthetic (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 303, 324, 372).

[0007] Diazepam is also used as a muscle relaxant. For example, diazepam can be used to relieve muscle spasms caused by inflammation of muscles, muscle spasms caused by secondary trauma, spasticity caused by upper motor neuron disorders such as cerebral palsy and paraplegia,

athetosis, and stiff-man syndrome (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 372).

[0008] Diazepam is also used to treat status epilepticus. Diazepam may also be useful for treating other seizures or convulsive disorders. The dose of diazepam used to treat status epilepticus is typically about 0.2 mg/kg in adults. (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 372, 422, 478-480, 484).

[0009] Diazepam is also useful for treating the symptoms of acute alcohol withdrawal, especially acute agitation, tremors, impending or acute delirium tremens, and hallucinosis.

[0010] Diazepam is also used as an antidote for intoxication by anti-cholinesterase inhibitors such as the organophosphorous pesticides and "nerve gases." Organophosphorous agents account for as much as 80% of pesticide related hospital admissions and is considered by the World Health Organization as a widespread global problem, particularly in developing countries. *Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 141-154 and 169-170.

SUMMARY OF THE INVENTION

[0011] A buccal aerosol spray or soft bite gelatin capsule using a polar or non-polar solvent has now been developed which provides biologically active compounds for rapid absorption through the oral mucosa, resulting in fast onset of effect.

[0012] The buccal aerosol spray compositions of the present invention, for transmucosal administration of a pharmacologically active compound soluble in a pharmacologically acceptable non-polar solvent comprise in weight % of total composition: pharmaceutically acceptable propellant 5-80 %, nonpolar solvent 19-85 %, active compound 0.05-50 %, suitably additionally comprising, by weight of total composition a taste mask and/or flavoring agent 0.01-10 %. Preferably the composition comprises: propellant 10-70 %, non-polar solvent 25-89.9 %, active compound 0.01-40 %, taste mask and/or flavoring agent 1-8 %; most suitably propellant 20-70 %, non-polar solvent 25-74.75 %, active compound 0.25-35 %, taste mask and/or flavoring agent 2-7.5 %.

[0013] The buccal polar aerosol spray compositions of the present invention, for transmucosal administration of a pharmacologically active compound soluble in a pharmacologically acceptable polar solvent are also administrable in aerosol form driven by a propellant. In this case, the composition comprises in weight % of total composition: aqueous polar solvent 10-97 %, active compound 0.1-25 %, suitably additionally comprising, by weight of total composition a taste mask and/or flavoring agent 0.05-10 % and propellant: 2 - 10 %. Preferably the composition comprises: polar solvent 20-97 %, active compound 0.1-15%, taste

mask and/or flavoring agent 0.1-5 % and propellant 2-5 %; most suitably polar solvent 25-97 %, active compound 0.2-25 %, taste mask and/or flavoring agent 0.1-2.5 % and propellant 2-4 %.

[0014] In another embodiment, the buccal polar aerosol spray compositions of the present invention for transmucosal administration of a pharmacologically active compound (*i.e.*, those administrable in aerosol form driven by a propellant) comprises a mixture of a polar and a non-polar solvent comprising in weight % of total composition: solvent 10-97 %, active compound 0.05-50 %, propellant 5 -80 %, and optionally a taste mask and/or flavoring agent 0.01-10 %. Preferably the composition comprises: solvent 20-97 %, active compound 0.1-40%, propellant 10-70%, and taste mask and/or flavoring agent 1-8%; most suitably solvent 25-97 %, active compound 0.25-35 %, propellant 20-70 %, and taste mask and/or flavoring agent 2-7.5 %. The ratio of the polar solvent to the non-polar solvent can range from about 1:99 to about 99:1, preferable from about 60:40 to about 40:60, and more preferably about 50:50.

[0015] The buccal pump spray composition of the present invention, *i.e.*, the propellant free composition, for transmucosal administration of a pharmacologically active compound wherein said active compound is soluble in a pharmacologically acceptable non-polar solvent comprises in weight % of total composition: non-polar solvent 30-99.69 %, active compound 0.005-55 %, and suitably additionally, taste mask and/or flavoring agent 0.1-10 %.

[0016] The buccal polar pump spray compositions of the present invention, *i.e.*, the propellant free composition, for transmucosal administration of a pharmacologically active compound soluble in a pharmacologically acceptable polar solvent comprises in weight % of total composition: aqueous polar solvent 30-99.69 %, active compound 0.001-60 %, suitably additionally comprising, by weight of total composition a taste mask and/or flavoring agent 0.1-10 %. Preferably the composition comprises: polar solvent 37-98.58 %, active compound 0.005-55 %, taste mask and/or flavoring agent 0.5-8 %; most suitably polar solvent 60.9-97.06 %, active compound 0.01-40 %, taste mask and/or flavoring agent 0.75-7.5 %.

[0017] In another embodiment, the buccal pump spray composition (*i.e.*, the propellant free composition) for transmucosal administration of a pharmacologically active compound comprises a mixture of a polar solvent and a non-polar solvent comprising in weight % of total composition solvent 30-99.69 %, active compound 0.001-60 %, and optionally a taste mask and/or flavoring agent 0.1-10 %. Preferably the composition comprises: solvent 37-98.58 %, active compound 0.005-55 %, taste mask and/or flavoring agent 0.5-8 %; more preferably the composition comprises solvent 60.9-97.06 %, active compound 0.01-40 %, and taste mask and/or flavoring agent 0.75-7.5 %. The ratio of the polar solvent to the non-polar solvent can range from about 1:99 to about 99:1, preferable about 60:40 to about 40:60, and more preferably about 50:50.

[0018] The soft bite gelatin capsules of the present invention for transmucosal administration of a pharmacologically active compound, at least partially soluble in a pharmacologically acceptable non-polar solvent, having charged thereto a fill composition comprise in weight % of total composition: non-polar solvent 4-99.99 %, emulsifier 0-20 %, active compound 0.01-80 %, provided that said fill composition contains less than 10 % of water, suitably additionally comprising, by weight of the composition: taste mask and/or flavoring agent 0.01-10 %. Preferably, the soft bite gelatin capsule comprises: non-polar solvent 21.5-99.975 %, emulsifier 0-15 %, active compound 0.025-70 %, taste mask and/or flavoring agent 1-8 %; most suitably: nonpolar solvent 28.5-97.9 %, emulsifier 0-10 %, active compound 0.1-65.0 %, taste mask and/or flavoring agent 2-6 %.

[0019] The soft bite polar gelatin capsules of the present invention for transmucosal administration of a pharmacologically active compound, at least partially soluble in a pharmacologically acceptable polar solvent, having charged thereto a composition comprising in weight % of total composition: polar solvent 25-99.89 %, emulsifier 0-20 %, active compound 0.01-65 %, provided that said composition contains less than 10 % of water, suitably additionally comprising, by weight of the composition: taste mask and/or flavoring agent 01-10 %. Preferably, the soft bite gelatin capsule comprises: polar solvent 37-99.95 %, emulsifier 0-15 %, active compound 0.025-55 %, taste mask and/or flavoring agent 1-8 %; most suitably: polar solvent 44-96.925 %, emulsifier 0-10 %, active compound 0.075-50 %, taste mask and/or flavoring agent 2-6 %.

[0020] It is an object of the invention to coat the mucosal membranes either with fine droplets of spray containing the active compounds or a solution or paste thereof from bite capsules.

[0021] It is also an object of the invention to administer to the oral mucosa of a mammalian in need of same, preferably man, by spray or bite capsule, a predetermined amount of a biologically active compound by this method or from a soft gelatin capsule.

[0022] A further object is a sealed aerosol spray container containing a composition of the non polar or polar aerosol spray formulation, and a metered valve suitable for releasing from said container a predetermined amount of said composition.

[0023] As the propellant evaporates after activation of the aerosol valve, a mist of fine droplets is formed which contains solvent and active compound.

[0024] The propellant is a non-Freon material, preferably a C₃₋₈ hydrocarbon of a linear or branched configuration. The propellant should be substantially non-aqueous. The propellant produces a pressure in the aerosol container such that under expected normal usage it will produce

sufficient pressure to expel the solvent from the container when the valve is activated but not excessive pressure such as to damage the container or valve seals.

[0025] The non-polar solvent is a non-polar hydrocarbon, preferably a C₇₋₁₈ hydrocarbon of a linear or branched configuration, fatty acid esters, and triglycerides, such as miglyol. The solvent must dissolve the active compound and be miscible with the propellant, *i.e.*, solvent and propellant must form a single phase at a temperature of 0-40°C a pressure range of between 1-3 atm.

[0026] The polar and non-polar aerosol spray compositions of the invention are intended to be administered from a sealed, pressurized container. Unlike a pump spray, which allows the entry of air into the container after every activation, the aerosol container of the invention is sealed at the time of manufacture. The contents of the container are released by activation of a metered valve, which does not allow entry of atmospheric gasses with each activation. Such containers are commercially available.

[0027] A further object is a pump spray container containing a composition of the pump spray formulation, and a metered valve suitable for releasing from said container a predetermined amount of said composition.

[0028] A further object is a soft gelatin bite capsule containing a composition of as set forth above. The formulation may be in the form of a viscous solution or paste containing the active compounds. Although solutions are preferred, paste fills may also be used where the active compound is not soluble or only partially soluble in the solvent of choice. Where water is used to form part of the paste composition, it should not exceed 10 % thereof. (All percentages herein are by weight unless otherwise indicated.)

[0029] The polar or non-polar solvent is chosen such that it is compatible with the gelatin shell and the active compound. The solvent preferably dissolves the active compound. However, other components wherein the active compound is not soluble or only slightly soluble may be used and will form a paste fill.

[0030] Soft gelatin capsules are well known in the art. See, for example, U.S.P. 4,935,243, Borkan et al., for its teaching of such capsules. The capsules of the present invention are intended to be bitten into to release the low viscosity solution or paste therein, which will then coat the buccal mucosa with the active compounds. Typical capsules, which are swallowed whole or bitten and then swallowed, deliver the active compounds to the stomach, which results in significant lag time before maximum blood levels can be achieved or subject the compound to a large first pass effect. Because of the enhanced absorption of the compounds through the oral mucosa and no chance of a first pass effect, use of the bite capsules of the invention will eliminate much of the lag

time, resulting in hastened onset of biological effect. The shell of a soft gelatin capsule of the invention may comprise, for example: gelatin: 50-75 %, glycerin 20-30 %, colorants 0.5-1.5 %, water 5-10 %, and sorbitol 2-10 %.

[0031] The active compound may include, biologically active peptides, central nervous system active amines, sulfonyl ureas, antibiotics, antifungals, antivirals, sleep inducers, antiasthmatics, bronchial dilators, antiemetics, histamine H-2 receptor antagonists, barbiturates, prostaglandins and neutraceuticals.

[0032] The active compounds may also include antihistamines, alkaloids, hormones, benzodiazepines and narcotic analgesics. While not limited thereto, these active compounds are particularly suitable for non-polar pump spray formulation and application.

[0033] The active compounds may also include p-FOX (fatty acid oxidation) inhibitors, acetylcholinesterase inhibitors, nerve impulse inhibitors, anti-cholinergics, anti-convulsants, anti-psychotics, anxiolytic agents, dopamine metabolism inhibitors, agents to treat post stroke sequelae, neuroprotectants, agents to treat Alzheimer's disease, neurotransmitters, neurotransmitter agonists, sedatives, agents for treating attention deficit disorder, agents for treating narcolepsy, central adrenergic antagonists, anti-depression agents, agents for treating Parkinson's disease, benzodiazepine antagonists, stimulants, neurotransmitter antagonists, tranquilizers, or a mixture thereof.

[0034] In one embodiment, the active compound is diazepam or a pharmaceutically acceptable salt thereof.

BRIEF DESCRIPTION OF THE DRAWING

[0035] FIG 1. is a schematic diagram showing routes of absorption and processing of pharmacologically active substances in a mammalian system.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

[0036] The preferred active compounds of the present invention are in an ionized, salt form or as the free base of the pharmaceutically acceptable salts thereof (provided, for the aerosol or pump spray compositions, they are soluble in the spray solvent). These compounds are soluble in the non-polar solvents of the invention at useful concentrations or can be prepared as pastes at useful concentrations. These concentrations may be less than the standard accepted dose for these compounds since there is enhanced absorption of the compounds through the oral mucosa. This aspect of the invention is especially important when there is a large (40-99.99%) first pass effect.

[0037] As propellants for the non polar sprays, propane, N-butane, iso-butane, N-pentane, iso-pentane, and neo-pentane, and mixtures thereof may be used. N-butane and iso-butane, as single gases, are the preferred propellants. It is permissible for the propellant to have a water

content of no more than 0.2%, typically 0.1-0.2%. All percentages herein are by weight unless otherwise indicated. It is also preferable that the propellant be synthetically produced to minimize the presence of contaminants which are harmful to the active compounds. These contaminants include oxidizing agents, reducing agents, Lewis acids or bases, and water. The concentration of each of these should be less than 0.1 %, except that water may be as high as 0.2%.

[0038] Suitable non-polar solvents for the capsules and the non-polar sprays include (C₂-C₂₄) fatty acid (C₂-C₆) esters, C₇-C₁₈ hydrocarbon, C₂-C₆ alkanoyl esters, and the triglycerides of the corresponding acids. When the capsule fill is a paste, other liquid components may be used instead of the above low molecular weight solvents. These include soya oil, corn oil, other vegetable oils.

[0039] As solvents for the polar capsules or sprays there may be used low molecular weight polyethyleneglycols (PEG) of 400-1000 Mw (preferably 400-600), low molecular weight (C₂-C₈) mono and polyols and alcohols of C₇-C₁₈ linear or branch chain hydrocarbons, glycerin may also be present and water may also be used in the sprays, but only in limited amount in the capsules.

[0040] It is expected that some glycerin and water used to make the gelatin shell will migrate from the shell to the fill during the curing of the shell. Likewise, there may be some migration of components from the fill to the shell during curing and even throughout the shelf-life of the capsule.

[0041] Therefore, the values given herein are for the compositions as prepared, it being within the scope of the invention that minor variations will occur.

[0042] The preferred flavoring agents are synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners (sugars, aspartame, saccharin, etc.), and combinations thereof.

[0043] The compositions may further include a taste mask. The term "taste mask" as used herein means an agent that can hide or minimize an undesirable flavor such as a bitter or sour flavor. A representative taste masks is a combination of vanillin, ethyl vanillin, maltol, iso-amyl acetate, ethyl oxyhydrate, anisic aldehyde, and propylene glycol (commercially available as "PFC 9885 Bitter Mask" from Pharmaceutical Flavor Clinic of Camden, NJ). A taste mask in combination with a flavoring agent is particularly advantageous when the active compound is an alkaloid since alkaloids often have a bitter taste.

[0044] The active substances include the active compounds selected from the group consisting of cyclosporine, sermorelin, octreotide acetate, calcitonin-salmon, insulin lispro, sumatriptan succinate, clozapine, cyclobenzaprine, dexfenfluramine hydrochloride, glyburide,

zidovudine, erythromycin, ciprofloxacin, ondansetron hydrochloride, dimenhydrinate, cimetidine hydrochloride, famotidine, phenytoin sodium, phenytoin, carboprost tromethamine, carboprost, diphenhydramine hydrochloride, isoproterenol hydrochloride, terbutaline sulfate, terbutaline, theophylline, albuterol sulfate and neutraceuticals, that is to say nutrients with pharmacological action such as but not limited to carnitine, valerian, echinacea, and the like.

[0045] In another embodiment, the active compound is a p-FOX (fatty acid oxidation) inhibitor, acetylcholinesterase inhibitor, nerve impulse inhibitor, anti-cholinergic, anti-convulsant, anti-psychotic, anxiolytic agent, dopamine metabolism inhibitor, agent to treat post stroke sequelae, neuroprotectant, agent to treat Alzheimer's disease, neurotransmitter, neurotransmitter agonist, sedative, agent for treating attention deficit disorder, agent for treating narcolepsy, central adrenergic antagonist, anti-depression agent, agent for treating Parkinson's disease, benzodiazepine antagonist, stimulant, neurotransmitter antagonist, tranquilizer, or a mixture thereof.

[0046] In one embodiment the active compound is a p-FOX inhibitor. A suitable p-FOX inhibitor for use in the buccal sprays of the invention includes, but is not limited to, ranolazine.

[0047] In one embodiment the active compound is an acetylcholinesterase inhibitor. Suitable acetylcholinesterase inhibitors for use in the buccal sprays of the invention include, but are not limited to, galantamine, neostigmine, physostigmine, and edrophonium.

[0048] In one embodiment the active compound is a nerve impulse inhibitor. Suitable nerve impulse inhibitors for use in the buccal sprays of the invention include, but are not limited to, levobupivacaine, lidocaine, prilocaine, mepivacaine, propofol, rapacuronium bromide, ropivacaine, tubocurarine, atracurium, doxaurium, mivacurium, pancuronium, vecuronium, pipecuronium, and rocuronium.

[0049] In one embodiment the active compound is an anti-cholinergic. Suitable anti-cholinergics for use in the buccal sprays of the invention include, but are not limited to, amantadine, ipratropium, oxitropium, and dicycloverine.

[0050] In one embodiment the active compound is an anti-convulsant. Suitable anti-convulsants for use in the buccal sprays of the invention include, but are not limited to, acetazolamide, carbamazepine, clonazepam, diazepam, divalproex (valproic acid), ethosuximide, lamotrigine acid, levetiracetam, oxcarbazepine, phenobarbital, phenytoin, pregabalin, primidone, remacemide, trimethadione, topiramate, vigabatrin, and zonisamide.

[0051] In one embodiment the active compound is an anti-psychotic. Suitable anti-psychotics for use in the buccal sprays of the invention include, but are not limited to, amisulpride, aripiprazole bifemelane, bromperidol, clozapine, chlorpromazine, haloperidol, iloperidone

loperidone, olanzapine, quetiapine, fluphenazine, fumarate, risperidone, thiothixene, thioridazine, sulpride, and ziprasidone,

[0052] In one embodiment the active compound is an anxiolytic agent. Suitable anxiolytic agents for use in the buccal sprays of the invention include, but are not limited to, amitryptiline, atracurium, buspirone, chlorzoxazone, clorazepate, cisatracurium, cyclobenzaprine, eperisone, esopiclone, hydroxyzine, mirtazapine, mivacurium, pagoclone, sulperide, zaleplon, and zopiclone.

[0053] In one embodiment the active compound is a dopamine metabolism inhibitor. Suitable dopamine metabolism inhibitors for use in the buccal sprays of the invention include, but are not limited to, entacapone, lazebemide, selegiline, and tolcapone.

[0054] In one embodiment the active compound is an agent to treat post stroke sequelae. Suitable agents to treat post stroke sequelae for use in the buccal sprays of the invention include, but are not limited to, glatiramer, interferon beta 1A, interferon beta 1B, estradiol, and progesterone.

[0055] In one embodiment the active compound is a neuroprotectant. Suitable neuroprotectants for use in the buccal sprays of the invention include, but are not limited to, donepezil, memantine, nimodipine, riluzole, rivastigmine, tacrine, TAK147, and xaliproden.

[0056] In one embodiment the active compound is an agent to treat Alzheimer's disease. Suitable agents to treat Alzheimer's disease for use in the buccal sprays of the invention include, but are not limited to, carbidopa, levodopa, tacrine, donepezil, rivastigmine, and galantamine.

[0057] In one embodiment the active compound is a neurotransmitter. Suitable neurotransmitters for use in the buccal sprays of the invention include, but are not limited to, acetylcholine, serotonin, 5-hydroxytryptamine (5-HT), GABA, glutamate, aspartate, glycine, histamine, epinephrine, norpinephrine, dopamine, adenosine, ATP, and nitric oxide.

[0058] In one embodiment the active compound is a neurotransmitter agonist. Suitable neurotransmitter agonists for use in the buccal sprays of the invention include, but are not limited to, almotriptan, aniracetam, atomoxetine, benserazide, bromocriptine, bupropion, cabergoline, citalopram, clomipramine, desipramine, diazepam, dihydroergotamine, doxepin duloxetine, eletriptan, escitalopram, fluvoxamine, gabapentin, imipramine, moclobemide, naratriptan, nefazodone, nefiracetam acamprosate, nicergoline, nortryptiline, paroxetine, pergolide, pramipexole, rizatriptan, ropinirole, sertraline, sibutramine, sumatriptan, tiagabine, trazodone, venlafaxine, and zolmitriptan.

[0059] In one embodiment the active compound is a sedative. Suitable sedatives for use in the buccal sprays of the invention include, but are not limited to, dexmedetomidine, eszopiclone, indiplon, zolpidem, and zaleplon.

[0060] In one embodiment the active compound is an agent for treating attention deficit disorder. Suitable agents for treating attention deficit disorder for use in the buccal sprays of the invention include, but are not limited to, amphetamine, dextroamphetamine, methylphenidate, and pemoline.

[0061] In one embodiment the active compound is an agent for treating narcolepsy. Suitable agents for treating narcolepsy for use in the buccal sprays of the invention include, but are not limited to, modafinil and mazindol.

[0062] In one embodiment the active compound is a central adrenergic antagonists. A suitable central adrenergic antagonists for use in the buccal sprays of the invention includes, but is not limited to, mesoridazine.

[0063] In one embodiment the active compound is an anti-depression agent. Suitable anti-depression agents for use in the buccal sprays of the invention include, but are not limited to, amitriptyline, amoxapine, bupropion, clomipramine, clomipramine, clorgyline, desipramine, doxepin, fluoxetine, imipramine, isocarboxazid, maprotiline, mirtazapine, nefazodone, nortriptyline, paroxetine, phenelzine, protriptyline, sertraline, tranlycypromine, trazodone, and venlafaxine.

[0064] In one embodiment the active compound is an agent for treating Parkinson's disease. Suitable agents for treating Parkinson's disease for use in the buccal sprays of the invention include, but are not limited to, amantadine, bromocriptine, carvidopa, levodopa, pergolide, and selegiline.

[0065] In one embodiment the active compound is a benzodiazepine antagonist. A suitable benzodiazepine antagonist for use in the buccal sprays of the invention includes, but is not limited to, flumazenil.

[0066] In one embodiment the active compound is a neurotransmitter antagonist. A suitable neurotransmitter antagonist for use in the buccal sprays of the invention includes, but is not limited, to deramciclane.

[0067] In one embodiment the active compound is a stimulant. Suitable stimulants for use in the buccal sprays of the invention include, but are not limited to, amphetamine, dextroamphetamine, dinoprostone, methylphenidate, methylphenidate, modafinil, and pemoline.

[0068] In one embodiment the active compound is a tranquilizer. A suitable tranquilizer for use in the buccal sprays of the invention includes, but is not limited to, mesoridazine.

[0069] In one embodiment, the active compound is diazepam or a pharmaceutically acceptable salt thereof. Typically, when the active compound is diazepam the buccal spray

composition contains from about 0.2 to 20 weight/weight (w/w) percent diazepam, preferably, about 0.5 to 15 w/w percent, and more preferably about 1 to 10 w/w percent diazepam.

[0070] The invention further relates to a method of managing anxiety in a patient by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0071] The invention further relates to a method of administering anesthesia to a patient comprising pre-medicating the patient with diazepam before administering the anesthesia by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0072] The invention further relates to a method of relieving muscle spasms by in a patient by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0073] The invention further relates to a method of treating status epilepticus in a patient by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0074] The invention further relates to a method for treating the symptoms of acute alcohol withdrawal in a patient by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0075] The invention further relates to a method of treating intoxication from exposure to an anticholinesterase agent in a patient by spraying the oral mucosa of the patient with a therapeutically effective amount of a buccal spray comprising diazepam or a pharmaceutically acceptable salt thereof.

[0076] The term “anticholinesterase agent” as used herein means any agent that inhibits cholinesterase, *i.e.*, the enzyme responsible for terminating the action of acetylcholinesterase at the junction of various cholinergic nerve endings (*Goodman and Gilman's The Pharmacological Basis of Therapeutics*, 9th ed., pp. 161.)

[0077] Representative anticholinesterase agents include, but are not limited to tetraethylpyrophosphate (“TEPP”), diethoxyphosphinylthiocholine iodide (echothiophate, phospholine iodide), O,O-diethyl O-(4-nitrophenyl)-phosphorothioate (parathion), O, O-dimethyl S-(1, 2-dicarbethoxyethyl) phosphorodithioate (malathion), isopropyl methylphosphonofluoridate (sarin, GB), pinacolyl methylphosphonofluoridate (soman), ethyl N-dimethylphosphoramidocyanidate (tabun), O, O,-diethyl 2-isopropyl-6-methyl-4-pyrimidinyl phosphorothioate (dimpylate, diazinon), O,O, dimethyl O-4-methylthio-m-tolyl phosphorothioate (fenthion), O, O-diethyl O-(4-nitrophenyl)-phosphate (paraoxon, mintacol), diisopropyl

phosphorofluoridate (diisopropyl fluorophosphate, DFP), 1-naphthyl N-methylcarbamate (carbaril, carbaryl, sevin), and 2-isopropoxyphenyl N-methylcarbamate (Baygon).

[0078] Anticholinesterase agents are known to be used as nerve gases and bioterrorism agents. Buccal sprays containing diazepam or a pharmaceutically acceptable salt thereof can be an effective antidote to nerve gases.

[0079] The formulations of the present invention comprise an active compound or a pharmaceutically acceptable salt thereof. The term "pharmaceutically acceptable salts" refers to salts prepared from pharmaceutically acceptable non-toxic acids or bases including organic and inorganic acids or bases.

[0080] When an active compound of the present invention is acidic, salts may be prepared from pharmaceutically acceptable non-toxic bases. Salts derived from all stable forms of inorganic bases include aluminum, ammonium, calcium, copper, iron, lithium, magnesium, manganese, potassium, sodium, zinc, etc. Particularly preferred are the ammonium, calcium, magnesium, potassium, and sodium salts. Salts derived from pharmaceutically acceptable organic non-toxic bases include salts of primary, secondary, and tertiary amines, substituted amines including naturally occurring substituted amines, cyclic amines and basic ion-exchange resins such as arginine, betaine, caffeine, choline, N,N dibenzylethylenediamine, diethylamine, 2-diethylaminoethanol, 2-dimethyl-aminoethanol, ethanolamine, ethylenediamine, N-ethylmorpholine, N-ethylpiperidine, glucamine, glucosamine, histidine, isopropylamine, lysine, methyl-glucosamine, morpholine, piperazine, piperidine, polyamine resins, procaine, purine, theobromine, triethylamine, trimethylamine, tripropylamine, etc.

[0081] When an active compound of the present invention is basic, salts may be prepared from pharmaceutically acceptable non-toxic acids. Such acids include acetic, benzenesulfonic, benzoic, camphorsulfonic, citric, ethane-sulfonic, fumaric, gluconic, glutamic, hydrobromic, hydrochloric, isethionic, lactic, maleic, mandelic, methanesulfonic, mucic, nitric, pamoic, pantothenic, phosphoric, succinic, sulfuric, tartaric, p-toluenesulfonic, etc. Particularly preferred are citric, hydrobromic, maleic, phosphoric, sulfuric, and tartaric acids.

[0082] In the discussion of methods of treatment herein, reference to the active compounds is meant to also include the pharmaceutically acceptable salts thereof. While certain formulations are set forth herein, the actual amounts to be administered to the mammal or man in need of same are to be determined by the treating physician.

[0083] The invention is further defined by reference to the following examples, which are intended to be illustrative and not limiting.

[0084] The following are examples of certain classes. All values unless otherwise specified are in weight percent.

EXAMPLES

EXAMPLE 1

Biologically active peptides including peptide hormones

A. Cyclosporine lingual spray

	Amounts	preferred amount	most preferred amount
cyclosporine	5-50	10-35	15-25
water	5-20	7.5-50	9.5-12
ethanol	5-60	7.5-50	10-20
polyethylene glycol	20-60	30-45	35-40
flavors	0.1-5	1-4	2-3

B. Cyclosporine Non-Polar lingual spray

	Amount s	preferred amount	most preferred amount
cyclosporine	1-50	3-40	5-30
Migylol	20	25	30-40
Polyoxyethylated castor oil	20	25	30-40
Butane	25-80	30-70	33-50
flavors	0.1-5	1-4	2-3

C. Cyclosporine non-polar bite caosule

	Amounts	preferred amount	most preferred amount
cyclosporine	1-35	5-25	10-20
olive oil	25-60	35-55	30-45
polyoxyethylated oleic glycerides	25-60	35-55	30-45
flavors	0.1-5	1-4	2-3

D. Cyclosporine bite capsule

	Amounts	preferred amount	most preferred amount
cyclosporine	5-50	10-35	15-25
polyethylene glycol	20-60	30-45	35-40
glycerin	5-30	7.5-25	10-20
propylene glycol	5-30	7.5-25	10-20
flavors	0.1-10	1-8	3-6

E. Sermorelin (as the acetate) lingual spray

	Amounts	preferred amount	most preferred
sermorelin (as the acetate)	.01-5	.1-3	.2-1.0
mannitol	1-25	5-20	10-15
monobasic sodium phosphate,	0.1-5	1-3	.5-2.5
dibasic sodium phosphate water	0.01-5	.05-3	0.1-0.5
ethanol	5-30	7.5-25	9.5-15
polyethylene glycol	20-60	30-45	35-40
propylene glycol	5-25	10-20	12-17
flavors	0.1-5	1-4	2-3

F. Octreotide acetate (Sandostatin) lingual spray

	Amounts	preferred amount	most preferred amount
octreotide acetate	0.001-0.5	0.005-0.250	0.01-0.10
acetic acid	1-10	2-8	4-6
sodium acetate	1-10	2-8	4-6

adjust pH to 7.0-7.8 with HCl or NaOH

EXAMPLE 2

CNS active amines and their salts: including but not limited to tricyclic amines, GABA analogues, thiazides, phenothiazine derivatives, serotonin antagonists and serotonin reuptake inhibitors

A. Sumatriptan succinate lingual spray

	Amounts	preferred amount	most preferred amount
sumatriptan succinate	0.5-30	1-20	10-15
ethanol	5-60	7.5-50	10-20
propylene glycol	5-30	7.5-20	10-15
polyethylene glycol	0-60	30-45	35-40
water	5-30	7.5-20	10-15
flavors	0.1-5	1-4	2-3

B. Sumatriptan succinate bite capsule

	Amounts	preferred amount	most preferred amount
sumatriptan succinate	0.01-5	0.05-3.5	0.075-1.75
polyethylene glycol	25-70	30-60	35-50
glycerin	25-70	30-60	35-50
flavors	0.1-10	1-8	3-6

C. Clozepine lingual spray

	Amounts	preferred amount	most preferred amount
clozepine	0.5-30	1-20	10-15
ethanol	5-60	7.5-50	10-20
propylene glycol	5-30	7.5-20	10-15
polyethylene glycol	0-60	30-45	35-40
water	5-30	7.5-20	10-15

flavors	0.1-5	1-4	2-3
---------	-------	-----	-----

D. Clozepine non-polar lingual spray with propellant

	Amounts	preferred amount	most preferred amount
clozepine	0.5-30	1-20	10-15
Migylol	20-85	25-70	30-40
Butanol	5-80	30-75	60-70
flavors	0.1-5	1-4	2-3

E. Clozepine non-polar lingual spray without propellant

	Amounts	preferred amount	most preferred amount
clozepine	0.5-30	1-20	10-15
Migylol	70-99.5	80-99	85-90
flavors	0.1-5	1-4	2-3

F. Cyclobenzaprine non-polar lingual spray

	Amounts	preferred amount	most preferred amount
cyclobenzaprine (base)	0.5-30	1-20	10-15
Migylol	20-85	25-70	30-40
Iso-butane	15-80	30-75	60-70
flavors	0.1-5	1-4	2-3

G. Dexfenfluramine hydrochloride lingual spray

	Amounts	preferred amount	most preferred amount
dexfenfluramine Hcl	5-30	7.5-20	10-15

WO 2005/032517**PCT/US2004/031798**

ethanol	5-60	7.5-50	10-20
propylene glycol	5-30	7.5-20	10-15

flavors	0.1-10	1-8	5-7.5

EXAMPLE 8
Prostaglandins

A. Carboprost thromethamine lingual spray

	Amounts	preferred amount	most preferred amount
carboprost thromethamine	0.05-5	0.1-3	0.25-2.5
water	50-95	60-80	65-75
ethanol	5-20	7.5-15	9.5-12.5
polyethylene glycol	5-20	7.5-15	9.5-12.5
sodium chloride	1-20	3-15	4-8
flavors	0.1-5	1-4	2-3

pH is adjusted with sodium hydroxide and/or hydrochloric acid

B. Carboprost non-polar lingual spray

	Amounts	preferred amount	most preferred amount
carboprost	0.05-5	0.1-3	0.25-2.5
migylol	25-50	30-45	35-40
Butane	5-60	10-50	20-35
polyoxyethylated oleic glycerides	25-50	30-45	35-40
flavors	0.1-10	1-8	5-7.5

EXAMPLE 9
Neutraceuticals

A. Carnitine as bite capsule (contents are a paste)

	Amounts	preferred amount	most preferred amount
carnitine fumarate	6-80	30-70	45-65
soya oil	7.5-50	10-40	12.5-35
soya lecithin	0.001-1.0	0.005-0.5	.01-0.1
Soya fats	7.5-50	10-40	12.5-35
flavors	1-10	2-8	3-6

B. Valerian as lingual spray

	Amounts	preferred amount	most preferred amount
valerian extract	0.1-10	0.2-7	0.25-5
water	50-95	60-80	65-75
ethanol	5-20	7.5-15	9.5-12.5
polyethylene glycol	5-20	7.5-15	9.5-12.5
flavors	1-10	2-8	3-6

C. Echinacea as bite capsule

	Amounts	preferred amount	most preferred amount
echinacea extract	30-85	40-75	45-55
soya oil	7.5-50	10-40	12.5-35
soya lecithin	0.001-1.0	0.005-0.5	.01-0.1
Soya fats	7.5-50	10-40	12.5-35
flavors	1-10	2-8	3-6

D. Mixtures of ingredients

	Amounts	preferred amount	most preferred amount
magnesium oxide	15-40	20-35	25-30
chromium picolinate	0.01-1.0	0.02-0.5	.025-0.75

B. A propellant free diazepam formulation in a polar solvent has the following formula:

Ingredient	Percent (w/w)
Diazepam	2
Propylene glycol	50
EDTA	0.02
Benzalkonium chloride	0.02
Taste mask	0.1
glycerol	0.5
Tween 80	0.5
water	2
ethanol Qs to	Qs to 100 mL

- C. A diazepam formulation in a polar solvent with a propellant can be made according to the following formula:

Ingredient	Percent (w/w)
Diazepam	1
Bitter mask	0.1
Ethanol	20
Butane	Qs to 100

- D. A propellant free diazepam formulation in a non-polar solvent has the following formula:

Ingredient	Percent (w/w)
Diazepam	2
Flavor	0.1
Ethanol	Qs to 100

- E. A diazepam formulation in a non-polar solvent with a propellant can be made according to the following formula:

Ingredient	Percent (w/w)
Diazepam	1
Bitter mask	0.1
Miglyol	20
Butane	Qs to 100

- F. A propellant free diazepam formulation in a mixture of a polar and a non-polar solvent can be made according to the following formula:

Ingredient	Percent (w/w)
Diazepam	1
Miglyol	20
Bitter mask	0.1
Ethanol	Qs to 100 mL

- F. A diazepam formulation in a mixture of a polar and a non-polar solvent with a propellant can be made according to the following formula:

Ingredient	Percent (w/w)
Diazepam	1
Ethanol	10
Bitter mask	0.1
Miglyol	20
Butane	Qs to 100

THE CLAIMS

What is claimed is:

1. A propellant free buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:
diazepam or a pharmaceutically acceptable salt thereof in an amount of between 0.001 and 60 percent by weight of the total composition; and
a polar solvent in an amount between 30 and 99 percent by weight of the total composition.
2. The composition of claim 1, further comprising a taste mask and/or flavoring agent in an amount of between 0.1 and 10 percent by weight of the total composition.
3. The composition of claim 2, wherein the polar solvent is present in an amount between 37 and 98 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.005 and 55 percent by weight of the total composition, and the taste mask and/or flavoring agent is present in an amount between 0.5 and 8 percent by weight of the total composition.
4. The composition of claim 3, wherein the polar solvent is present in an amount between 60 and 97 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.01 and 40 percent by weight of the total composition, and the taste mask and/or flavoring agent is present in an amount between 0.75 and 7.5 percent by weight of the total composition.
5. The composition of claim 1, wherein the polar solvent is selected from the group consisting of polyethylene glycols having a molecular weight between 400 and 1000, C₂ to C₈ mono- and poly-alcohols, and C₇ to C₁₈ alcohols of linear or branched configuration.
6. The composition of claim 1, wherein the polar solvent comprises polyethylene glycol.
7. The composition of claim 1, wherein the polar solvent comprises ethanol.
8. The composition of claim 2, wherein the flavoring agent is selected from the group consisting of synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners, and mixtures thereof.

9. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 1.

10. The method of claim 9, wherein the amount of the spray is predetermined.

11. A buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount of between 0.1 and 25 percent by weight of the total composition;

a polar solvent in an amount between 10 and 97 percent by weight of the total composition; and

a propellant in an amount between 2 and 10 percent by weight of the total composition, wherein said propellant is a C₃ to C₈ hydrocarbon of linear or branched configuration.

12. The composition of claim 11, further comprising a taste mask and/or flavoring agent in an amount between 0.05 and 10 percent by weight of the total composition.

13. The composition of claim 12, wherein the polar solvent is present in an amount between 20 and 97 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.1 and 15 percent by weight of the total composition, the propellant is present in an amount between 2 and 5 percent by weight of the composition, and the taste mask and/or flavoring agent is present in an amount between 0.1 and 5 percent by weight of the total composition.

14. The composition of claim 13, wherein the polar solvent is present in an amount between 25 and 97 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.2 and 25 percent by weight of the total composition, the propellant is present in an amount between 2 and 4 percent by weight of the composition, and taste mask and/or flavoring agent is present in an amount between 0.1 and 2.5 percent by weight of the total composition.

15. The composition of claim 11, wherein the polar solvent is selected from the group consisting of polyethyleneglycols having a molecular weight between 400 and 1000, C₂ to C₈ mono- and poly-alcohols, and C₇ to C₁₈ alcohols of linear or branched configuration.

16. The composition of claim 15, wherein the polar solvent comprises polyethylene glycol.

17. The composition of claim 15, wherein the polar solvent comprises ethanol.

18. The composition of claim 12, wherein the flavoring agent is selected from the group consisting of synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners, and mixtures thereof.
19. The composition of claim 11, wherein the propellant is selected from the group consisting of propane, *N*-butane, *iso*-butane, *N*-pentane, *iso*-pentane, *neo*-pentane, and mixtures thereof.
20. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 11.
21. The method of claim 20, wherein the amount of the spray is predetermined.
22. A propellant free buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:
diazepam or a pharmaceutically acceptable salt thereof in an amount between 0.005 and 55 percent by weight of the total composition; and
a non-polar solvent in an amount between 30 and 99 percent by weight of the total composition.
23. The composition of claim 22, further comprising a taste mask and/or flavoring agent in an amount between 0.1 and 10 percent by weight of the total composition.
24. The composition of claim 23, wherein the flavoring agent is selected from the group consisting of synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners, and mixtures thereof.
25. The composition of claim 22, wherein the solvent is selected from the group consisting of (C₂-C₂₄) fatty acid (C₂-C₆) esters, C₇-C₁₈ hydrocarbons of linear or branched configuration, C₂-C₆ alkanoyl esters, and triglycerides of C₂-C₆ carboxylic acids.
26. The composition of claim 25, wherein the solvent is a triglyceride.
27. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 22.
28. The method of claim 27, wherein the amount of the spray is predetermined.
29. A buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount between 0.05 and 50 percent by weight of the total composition; and

a non-polar solvent in an amount between 19 and 85 percent by weight of the total composition; and

a propellant in an amount between 5 and 80 percent by weight of the total composition, wherein said propellant is a C₃ to C₈ hydrocarbon of linear or branched configuration.

30. The composition of claim 29, further comprising a taste mask and/or flavoring agent in an amount of between 0.1 and 10 percent by weight of the total composition.

31. The composition of claim 30, wherein the flavoring agent is selected from the group consisting of synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners, and mixtures thereof.

32. A buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount between 0.01 and 40 percent by weight of the total composition;

a non-polar solvent in an amount between 25 and 89 percent by weight of the total composition;

a propellant in an amount between 10 and 70 percent by weight of the total composition, wherein said propellant is a C₃ to C₈ hydrocarbon of linear or branched configuration; and

a taste mask and/or flavoring agent is present in an amount between 1 and 8 percent by weight of the total composition.

33. The composition of claim 32, wherein the propellant is present in an amount between 20 and 70 percent by weight of the total composition, the non-polar solvent is present in an amount between 25 and 75 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount from between 0.25 and 35 percent by weight of the total composition, and the taste mask and/or flavoring agent is present in an amount between 2 and 7.5 percent by weight of the total composition.

34. The composition of claim 29, wherein the propellant is selected from the group consisting of propane, *n*-butane, *iso*-butane, *n*-pentane, *iso*-pentane, *neo*-pentane, and mixtures thereof.

35. The composition of claim 34, wherein the propellant is *n*-butane or *iso*-butane and has a water content of not more than 0.2 percent and a concentration of oxidizing agents, reducing agents, Lewis acids, and Lewis bases of less than 0.1 percent.

36. The composition of claim 29, wherein the solvent is selected from the group consisting of (C₂-C₂₄) fatty acid (C₂-C₆) esters, C₇-C₁₈ hydrocarbons of linear or branched configuration, C₂-C₆ alkanoyl esters, and triglycerides of C₂-C₆ carboxylic acids.

37. The composition of claim 36, wherein the solvent is triglyceride.

38. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 29.

39. The method of claim 38, wherein the amount of the spray is predetermined.

40. A buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount between 0.2 and 10 percent by weight of the total composition; and

a polar solvent comprising propylene glycol and ethanol in an amount between 50 and 99 percent by weight of the total composition.

41. A propellant free buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount of between 0.001 and 60 percent by weight of the total composition; and

a mixture of a polar solvent and a non-polar solvent in an amount of between 30 and 99.69 percent by weight of the total composition, wherein the ratio of the polar solvent to the non-polar solvent ranges from 1:99 to 99:1.

42. The composition of claim 40, further comprising a taste mask and/or flavoring agent in an amount of between 0.1 and 10 percent by weight of the total composition.

43. The composition of claim 42, wherein the polar solvent is present in an amount between 37 and 98 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.005 and 55 percent by weight of the total composition, and the taste mask and/or flavoring agent is present in an amount between 0.5 and 8 percent by weight of the total composition.

44. The composition of claim 43, wherein the polar solvent is present in an amount between 60 and 97 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount between 0.01 and 40 percent by weight of the total composition, and the taste mask and/or flavoring agent is present in an amount between 0.75 and 7.5 percent by weight of the total composition.

45. The composition of claim 41, wherein the polar solvent is selected from the group consisting of polyethylene glycols having a molecular weight between 400 and 1000, C₂ to C₈ mono- and poly-alcohols, and C₇ to C₁₈ alcohols of linear or branched configuration and the non-polar solvent is selected from the group consisting of (C₂-C₂₄) fatty acid (C₂-C₆) esters, C₇-C₁₈ hydrocarbons of linear or branched configuration, C₂-C₆ alkanoyl esters, and triglycerides of C₂-C₆ carboxylic acids.

46. The composition of claim 42, wherein the flavoring agent is selected from the group consisting of synthetic or natural oil of peppermint, oil of spearmint, citrus oil, fruit flavors, sweeteners, and mixtures thereof.

47. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 41.

48. The method of claim 47, wherein the amount of the spray is predetermined.

49. A buccal spray composition for transmucosal administration of diazepam or a pharmaceutically acceptable salt thereof comprising:

diazepam or a pharmaceutically acceptable salt thereof in an amount between 0.05 and 50 percent by weight of the total composition;

a mixture of a polar and a non-polar solvent in an amount between 10 and 97 percent by weight of the total composition, wherein the ratio of the polar solvent to the non-polar solvent ranges from 1:99 to 99:1; and

a propellant in an amount between 5 and 80 percent by weight of the total composition, wherein said propellant is a C₃ to C₈ hydrocarbon of linear or branched configuration.

50. The composition of claim 49, further comprising a taste mask and/or flavoring agent is present in an amount between 0.01 and 10 percent by weight of the total composition.

51. The composition of claim 50, wherein the propellant is present in an amount between 10 and 70 percent by weight of the total composition, the solvent is present in an amount between 20 and 97 percent by weight of the total composition, the diazepam or a pharmaceutically acceptable salt thereof is present in an amount from between 0.1 and 40 percent by weight of the

total composition, and the taste mask and/or flavoring agent is present in an amount between 1 and 8 percent by weight of the total composition.

52. The composition of claim 49, wherein the propellant is selected from the group consisting of propane, *n*-butane, *iso*-butane, *n*-pentane, *iso*-pentane, *neo*-pentane, and mixtures thereof.

53. The composition of claim 52, wherein the propellant is *n*-butane or *iso*-butane and has a water content of not more than 0.2 percent and a concentration of oxidizing agents, reducing agents, Lewis acids, and Lewis bases of less than 0.1 percent.

54. The composition of claim 49, wherein the polar solvent is selected from the group consisting of polyethylene glycols having a molecular weight between 400 and 1000, C₂ to C₈ mono- and poly-alcohols, and C₇ to C₁₈ alcohols of linear or branched configuration and the non-polar solvent is selected from the group consisting of (C₂-C₂₄) fatty acid (C₂-C₆) esters, C₇-C₁₈ hydrocarbons of linear or branched configuration, C₂-C₆ alkanoyl esters, and triglycerides of C₂-C₆ carboxylic acids.

55. A method of administering diazepam or a pharmaceutically acceptable salt thereof to a mammal, comprising spraying the oral mucosa of the mammal with the composition of claim 49.

56. The method of claim 55, wherein the amount of the spray is predetermined.

57. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

58. A method of administering anesthesia to a patient, comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

59. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

60. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

61. A method for treating the symptoms of acute alcohol withdrawal in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

62. A method of treating intoxication from exposure to an anticholinesterase agent in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 1.

63. The method of claim 62, wherein the anticholinesterase agent is a nerve gas.

64. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

65. A method of administering anesthesia to a patient, comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

66. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

67. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

68. A method for treating the symptoms of acute alcohol withdrawal in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

69. A method of treating intoxication from exposure to an anticholinesterase agent in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 11.

70. The method of claim 69, wherein the anticholinesterase agent is a nerve gas.

71. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

72. A method of administering anesthesia to a patient, comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

73. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

74. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

75. A method for treating the symptoms of acute alcohol withdrawal in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

76. A method of treating intoxication from exposure to an anticholinesterase agent in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 22.

77. The method of claim 76, wherein the anticholinesterase agent is a nerve gas.

78. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

79. A method of administering anesthesia to a patient, comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

80. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

81. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

82. A method for treating the symptoms of acute alcohol withdrawal in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

83. A method of treating intoxication from exposure to an anticholinesterase agent in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 29.

84. The method of claim 83, wherein the anticholinesterase agent is a nerve gas.

85. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

86. A method of administering anesthesia to a patient ,comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

87. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

88. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

89. A method for treating the symptoms of acute alcohol withdrawl in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

90. A method of treating intoxication from exposure to an anticholinesterase agent in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 41.

91. The method of claim 90, wherein the anticholinesterase agent is a nerve gas.

92. A method of managing anxiety in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 49.

93. A method of administering anesthesia to a patient, comprising pre-medicating the patient with diazepam before administering the anesthesia comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 49.

94. A method of relieving muscle spasms in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 49.

95. A method of treating status epilepticus in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 49.

96. A method for treating the symptoms of acute alcohol withdrawl in a patient, comprising spraying the oral mucosa of the patient with a therapeutically effective amount of the buccal spray of claim 49.
