(54) Title: VARIABLE WATER FLOW AND DILUTION CHEMICAL DISPENSER

(57) Abstract: A dispenser (10) for mixing and dispensing a liquid chemical concentrate from a container (16) with a stream of diluting water. The dispenser (10) includes two valve members (30, 32) which control in one instance the water flow and in another instance the amount of concentrate being siphoned into the water flow. The dispenser (10) is of a simplified design yet can afford a variety of different chemical concentrations, as well as various flow rates of the water.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *&* document member of the same patent family
