(54) Title: TRANSMISSION SYSTEM

(57) Abstract: Transmission system (TS) comprising: - a clutch module (CM) having an input (In) and a first and a second output (O1, O2), wherein between the first output and the input, a first clutch device (B, B1, C2) provided with first actuating means is present, and between the second output and the input a second clutch device (C, B2) with second actuating means is present, and - a transmission module (TM), with an output (Out) and a first and a second input (i1, i2), wherein between the first input and the output, a first partial transmission provided with at least one transmission (VAR) is present, and between the second input and the output a second partial transmission provided with at least one further transmission or a mechanical connection is present, - in which the two outputs (O1, O2) of the clutch module are connected to the two inputs (i1, i2) of the transmission module. The transmission system further comprises a short-circuit clutch (S), which is present between the two outputs of the clutch module and/or the two inputs of the transmission module. The transmission (VAR) inside the first partial transmission is continuously variable within a specified transmission range.
