(54) Title of the Invention: **Limiting route selection policy rules to some networks**  
Abstract Title: **Limiting route selection policy rules to some networks**

(57) There is further provided a user equipment apparatus comprising a receiver, a transmitter and a processor. The receiver is arranged to receive from a first wireless communication network at least one route selection policy rule together with a policy delivery request, wherein the policy delivery request includes a list of network identities for which route selection policy rules provisioned from the first wireless communication network must be applied. The transmitter is arranged to transmit a registration request to a second wireless communication network, where a network identity of the second wireless communication network is not listed in the list of network identities for which route selection policy rules provisioned from the first wireless communication network must be applied. The processor is arranged to not apply route selection policy rules provisioned from the first wireless communication network.
