Inventor:

Harrison Cole

United States Patent Office.

HARRISON COLE, OF CINCINNATI, OHIO.

Letters Patent No. 70,698, dated November 12, 1867.

IMPROVED CHAIR.

The Schedule referred to in these Letters Patent and making part of the same.

TO ALL WHOM IT MAY CONCERN:

Be it known that I, HARRISON COLE, of Cincinnati, in the county of Hamilton, and State of Ohio, have invented certain new and useful Improvements in Chairs; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the annexed drawings, making part of this specification, in which—

Figure 1 is a perspective view of my improved chair.

Figure 2 is a rear view of the double tripod.

The nature of my invention consists, first, in the form of the double metallic tripod, by which the chair is supported, for the purpose of giving elasticity to the seat.

In the drawings, A represents what I have called a "double tripod," consisting of two truncated tripods connected at the point of truncation, and strengthened by the brace A'', which tripod forms the legs or standard of the chair. B is the chair-bottom, secured to the upper portion of the tripod by screws at C' C' C'. The feet of the standard are fastened to the floor by screws passing through the lugs C C C.

This tripod is cast in a single piece because of its greater economy, and so that all the parts are more firmly connected together for mutual support, and by the curvature of the legs, especially of the front leg A', a degree of elasticity is obtained, which takes off the strain from the screws which secure the feet, and prevents them from being wrenched from the floor when the sitter leans backward, as is frequently the case with chairs whose standards are rigid or non-elastic.

Having thus described my invention, what I desire to secure by Letters Patent, is—

The three-legged chair-standard A, in combination with the brace A and the lugs C C C and C' C' C', for attaching it to the floor and chair-bottom, substantially as shown.

HARRISON COLE.
