UNITED STATES PATENT OFFICE.

MORRIS CRUPAIN, OF NEWARK, NEW JERSEY.

TOILET-ARTICLE PACKAGE.

Application filed November 13, 1922. Serial No. 600,769.

To all whom it may concern:

Be it known that I, MORRIS CRUPAIN, a citizen of the United States, residing at Newark, in the county of Essex and State of New Jersey, have invented certain new and useful Improvements in Toilet-Article Packages, of which the following is a specification.

This invention relates to improvements in toilet article packages adapted to be used in combination with a powder puff, said package being a transparent envelope to encase said puff, there being disposed interiorly within the package a stiffening or extension sheet provided with an opening centrally thereof whereby the ornamental side of the powder puff is exhibited through the transparent covering while through the opposite side of the transparent cover the opposite side of the powder puff is observable, thus providing a means which keeps the package flat and at the same time permits an inspection of both sides of the puff so that a choice of designs may be readily secured.

In the accompanying drawings:—

Figure 1 is a front elevation of the complete package.

Figure 2 is a rear view thereof, and

Figure 3 is a section taken on line 3—3 of Figure 1.

Referring to the drawings, the numeral 5 designates the complete envelope which is here shown as made of a single strip of transparent material bent to provide the lower flap 6 and the overlapped edges 7 and 8 and the closed edge 9. Adapted to be slipped within the envelope or package is the powder puff 10 which is here shown of a circular shape and provided with the ornamental side 11. The ornamental side is adapted to face the plain side of the envelope, that is, the side opposite to the edges 7 and 8, while also slipped within the envelope is the extending sheet or strip 12 which is provided with a central opening 13 through which the ornamental part of the powder puff is observable. About the opening is an ornamentation 14 which is also observable through the main face of the envelope.

By making this package in this manner, the extending strip 13 holds the package perfectly flat so that the powder puff is held in a sanitary position as well as flat, the said powder puff being observable through the rear of the package and the ornamentation through the opening of the extension strip.

Although the opening here is shown circular, it is evident that other shapes such as star, heart, diamond, may be used and still be within the scope of the present invention.

Although the complete package is here shown as square, it is evident that the same also may be made oblong or triangular and still be within the scope of the present invention.

What I claim as new is:

A toilet article package comprising in combination a powder puff having an ornamental face, a transparent envelope encasing said puff and through one wall of which one side of said puff may be inspected, and a printed or pictorial ornamental relatively stiff sheet insertible within the envelope to maintain the envelope in substantially extended form, said sheet being provided with an opening through which the ornamental side of the powder puff is observable through the opposite side of the envelope.

In testimony whereof I affix my signature.

MORRIS CRUPAIN.
